Female Speaker

## START OF TRANSCRIPT

**[00:00:15] Male Speaker**

The views and opinions expressed in these radio programs are those of the individual hosts and do not reflect the official policy or position of Universal Broadcasting Network. Welcome to the new sound of online radio. Welcome to the Sound of Universal Broadcasting Network. You make me feel like I've been locked out of heaven. Mix of today's hits and hard to find favorites. Combined with the most entertaining and intriguing talk anywhere. This is your sound. This is the sound of Universal Broadcasting Network and Radio.com.

**[00:00:54] Del Bigtree**

High above the circus of mainstream news media spin, death defying talk without a safety net. This is Highwire. Thank you for joining us. Good morning. Good afternoon. Wherever you are around the world, this is our second episode. We are up and running and having a really good time. I want to start off today with a crazy article that appeared on Facebook this week. It came from the Journal of Pediatrics. Now, for those of you who just joined the show for the first time and don't know who I am, I made a movie called VAXXED about vaccine safety and specifically about a cover up at the CDC. We have a whistleblower at the Centers for Disease Control and Prevention named Dr. William Thompson has come forward and said that they're committing scientific fraud and covering up the dangers of vaccines. Our movie is specifically about the MMR vaccine as it relates to autism. If you want to see that movie, you can see it at Amazon iTunes.com or at our own website, VAXXED.Com that's VAXXED. But anyway, that whole journey has taken me into a place I never expected. I was a medical journalist. I produced one of the top medical talk shows in the world for over six years before I stumbled upon this story. So I'm into celebrating the best that medicine has to offer the best doctors, surgeons, cutting edge techniques.

**[00:02:21] Del Bigtree**

I love science. That's what this is really about. But sometimes science appears to be purchased. It's bought, it's manipulated. Much like we found out about the tobacco industry when they were buying the science around tobacco and telling us it was safe. It now appears much of the same thing is taking place with vaccines. It's a hard reality. It's very difficult to wrap your head around. It's upsetting because I think not only have people been lied to, the doctors we trust have been lied to, and now they find themselves in a very difficult position. But today I want to talk a little bit about that, because it's how the medical establishment, the mainstream media, the AMA and the pediatric association, how they're framing this discussion, I think points to some of the alarm we should all have as citizens in the United States of America. And so this this came out on Facebook. This was a story that was published in the journal Pediatrics just last year. The title of it is "Unintended Consequences of Invoking the Natural in Breastfeeding Promotion." Now, I'm just going to read you a couple of the excerpts from here. You could certainly go to that journal and and look up this article and see all that it has to offer in its glory. But for me, this is totally insane. Listen to this. So it starts out with medical and "medical and public health organizations recommend that mothers exclusively breastfeed for at least six months."

**[00:03:51] Del Bigtree**

"This recommendation is based on evidence of health benefits for mothers and babies, as well as developmental development, Developmental benefits for babies." Of course, that's what we all know. I think we knew, like during the times of the Dr. Spock book and things, there was this move away from breastfeeding. Everybody was putting their children on formula instead. And we had a real health issue around it. And so we've gotten back to recognizing that breastfeeding is actually important. Many studies show that even the contents and the vitamins and minerals and things that are delivered by breast milk cannot be found anywhere else in nature. And some studies show that that breast milk even changes depending on the child's need, if they're sick or they have other issues. So it's an incredible, brilliant, natural thing. For those of you that believe in divine design. God did a wonderful thing here in creating breast milk that really makes our children healthier. But anyway, the the article goes on to say, "Promoting breastfeeding as natural may be ethically problematic." I want to read that again. "Promoting breastfeeding as natural may be ethically problematic. And even more troubling, it may bolster this belief that natural approaches are presumptively healthier. This may ultimately challenge public health's aims in other contexts, particularly childhood vaccination."

**[00:05:24] Del Bigtree**

So obviously now we are watching this. This is an article saying that maybe we have to look at the fact that we are calling breastfeeding natural. Okay. It goes on "beneath the concerns of many Americans over vaccine safety, a specific and not necessarily illogical worldview is discernible. A rejection of the manufactured, the synthetic and the unnatural, and an embrace of the natural as a healthier and intrinsically better. Vaccines are often seen as unnatural, and boosting immunity naturally is viewed by some as the healthier and better approach." It goes on to say a little later, "this embrace of the natural over the unnatural appears in a variety of contemporary scientific and medical issues beyond vaccination, including rejection of genetically modified foods." Yeah. God forbid we have that. "A preference for organic over conventionally grown foods." People watch out for the organic. Stay away from it. The Pediatric Association thinks this is crazy talk "and rejection of assisted reproductive technologies, as well as concerns over environmental toxins and water fluoridation." Think about this. So are we saying that you're crazy to want to eat organic food, that, GMOs are the way to go and forget about the toxins in your water and air? We at the association, the pediatric association, the AMA, really stand behind polluting air and water and food and would rather you not involve yourself in thinking about it. For example, it goes on to say "the US Department of Health and Human Services, it's only natural breastfeeding promotion campaign is an explicit attempt to persuade women to breastfeed by framing breastfeeding as better than formula because it is natural."

**[00:07:20] Del Bigtree**

"Furthermore, the American Academy of Pediatrics has referred to breast milk as the best and most natural food for infants." Okay. So at one point it looked like the pediatric association was getting this right. Now, are we going to see a sea change in how we deliver this? This article finishes up this way. "Whatever the ethics of appealing to the natural and breastfeeding promotion, it raises practical concerns. The natural option does not align consistently with public health goals." Really? Really the natural option does not go along with public health goals. Folks, this is where we have to start checking in with what then exactly is the goal of our health departments in this nation? Is it not to be natural, not to be healthy? Are we going to say that you should stop jogging? That's not the best way to lose weight. What you need to do is put yourself on drugs to lose weight because taking natural approaches like eating better or jogging in the morning could be detrimental to our overall health plan. I don't even, you can't make this stuff up. This isn't a conspiracy. I didn't write this. This is from the AAP.

**[00:08:31] Del Bigtree**

This is outrageous. So, so I'll say it again. "The natural option does not align consistently with public health goals. If doing what is natural is best. In the case of breastfeeding, how can we expect mothers to ignore that powerful and deeply persuasive worldview when making choices about vaccination? If breastfeeding promotion frames the factory made option as risky or unhealthy, what should parents conclude when choosing between factory made vaccines and boosting immunity naturally." For those of you that really want to try and wrap your head around this, I say that if you stop your average person on the street and said, How do vaccines work? I think they describe it like this. They would say, well, there's this tiny little bit of a virus that's put in some inert substance like salt water, and it's injected into us. And because it's such a small amount, we we develop an immunity without actually getting the disease. For those of you that would have a more eloquent explanation, great. But I think that's where most of us that's what I thought. I think that's what most doctors honestly think is how vaccines work. But the truth is, is that is the definition of homeopathy. A tiny little amount of something that goes in our body and we develop an immunity towards it. Vaccines, actually, as they have pointed out, factory made vaccines do not just have the antigen or the virus in them and some salt water.

#### [00:10:01] Del Bigtree

They have things like mercury, the second most deadly toxic substance on earth, aluminum, a known neurotoxin, formaldehyde. What was the last time you saw an article in the paper that some toy from China had formaldehyde on it, so we sent it back? Well, apparently we don't want it on our toys, but it's great to inject it right into your infant day. One old baby, two month old baby, four month old baby, six month old baby. Because we do it over and over and over again and incredibly toxic levels. And then forget about aborted fetal tissue. That's right. We're injecting the DNA of dead babies, aborted babies into our own babies. I've done some look into the research around this, and I think it's going to prove to be actually problematic when we think about GMO foods. What if we're all genetically modified because of our vaccine program? A lot of science is now showing that the way they use this foreign DNA that's coming not only from dead babies, but also other animals, we inject animal DNA into us with these vaccines because that's how we grow these viruses. It's all a part of the process of making a vaccine. Well, in our infinite wisdom, we chop the DNA up into a bunch of little pieces. This is what we thought because we didn't really have any science around it.

#### [00:11:19] Del Bigtree

We'd never injected foreign DNA into a baby. So we thought, Well, I mean, theoretically it seems like it would be a lot safer to just chop these DNA strands into little pieces versus have these big DNA strands floating around in an environment where other DNA exists. Now, there's science showing that because we've chopped it into these little pieces, our own DNA strands are absorbing them into and genetically modifying our own DNA. I think there's more science coming on this very, very scary idea, though, that we would be absorbing some other person or some other animals DNA into our own. The science looking at this thinks that maybe it's causing this rise in childhood cancers among other things that have really increased since vaccines came along. But anyway, finishing out this article, "we should think twice before referencing the natural in breastfeeding promotion, even if it motivates women to breastfeed." That comes from the pediatric association to you. It came out last year in March, but some people on Facebook really uncovered it and brought it to certainly my attention among many others this week. So I guess what we've come to the conclusion then that breastfeeding is the gateway drug to natural health. You can't think of anything crazier than this.

#### [00:12:47] Del Bigtree

So if you're one of these people out there that wants to eat organic food has a problem with genetically modified food doesn't want glyphosate, which has now been joined Prop 65 here in California. We're going to list it as a carcinogen, which hopefully they'll start labeling on food. But if you have problems with pesticides on your food, GMO food, maybe you're into chiropractic, or perhaps you like to go to Pilates class and God forbid you jog in the morning to lose weight versus take a drug. Apparently you have those thoughts because you must have been breastfed. And we must put an end to this insanity. Now that comes from the scientific body that we are told we are supposed to be listening to. Folks, it's time to start doing your own thinking. We cannot trust scientific bodies that clearly now are working for the pharmaceutical industry. They're funded by these industries. They're funded by Merck, by Sanofi, Aventis, Pfizer. They're funded by Monsanto, who is spraying our food with with deadly chemicals and telling us that we shouldn't eat organic food. All of this is the total corruption of the health bodies we were supposed to believe in. It's also the corruption of our government. As I've said before, the pharmaceutical industry is now the most powerful lobby in Washington. They're outspending oil and gas 2 to 1. Think about that. We grew up knowing that that the energy sector was one of the most powerful lobbies in Washington.

#### [00:14:25] Del Bigtree

Now pharma is outspending them \$2 for every \$1 the energy sector spending. And I ask you, what do you think they're doing there? Do you think they're fighting for the safety of your children? Do you think they're fighting for our safety? Because I'm not into conspiracy theories. I'm into looking at the facts and the proof. I'm a journalist and what I see is them telling us exactly what they believe. When we saw the EpiPen get jacked up a couple of weeks ago, six times what it originally cost, the Congress called that company in to ask questions, saying, you know, we used to call this carpet bagging. You're taking advantage of a need. We now have a need that every classroom in America needs an EpiPen. Now it's a totally different discussion. Why we have that need. I think you can blame vaccines for part of that because we didn't need an EpiPen in my classroom when I was a kid. I can't remember a single school where I couldn't bring a peanut butter and jelly sandwich. But this is the new norm. This is our new health. And in this new world of health, we need EpiPens everywhere. So why the Congress asks the industry, Would you jack up the price of something that is obviously selling like hotcakes? You're making a ton of money off of it. And they say to our faces, because you make a mistake, we do not work for the patients or the citizens of this country or the world.

**[00:15:44] Del Bigtree**

We work for our stockholders. That's why we're making this choice. And there's nothing that Congress or the government can do about it, mostly because we put you in office. I hate to be the bearer of bad news, folks, but we have our work cut out for us if we're going to stand up for our own freedom, for truth, and to make sure that our health agency and our health departments aren't outlawing or trying to dissuade us from things like breastfeeding and jogging. I have a great show today. I have an amazing guest I am really excited to bring in here. This is someone that, as I said, because I've been on this tour all year discussing vaccine risk awareness, which is really what this is. They want to call everybody involved in this movement anti-vaxxer. It's not true. There's many of us that would just love to see a vaccine program that was perfectly safe and effective. But the truth is that kids will be murdered this year by the vaccine program. They will die. That's a fact. Other kids will have their brains swell. They'll have a neurological event, and they will never be the same again. Some of them will never, ever say, I love you, Mommy, ever again after visiting their pediatrician.

**[00:16:54] Del Bigtree**

I don't think that's an acceptable place to say that the science is settled. I think you settle science when science is perfectly safe for everybody that's involved in it. And if you're a person that says, hey, that's an accepted casualty, especially if you're a scientist saying that, I say, please step out of the way then and leave room. Make room for the new scientists that are going to come forward and figure out how to evolve our health in a better way. And yes, I think being natural is a part of how we're going to make the society healthier. The less and less natural we get, the more and more antibiotics we use, the more and more nature seems to find a way around it and put us in jeopardy. As many of you know, we think this may be the end of the antibiotic age because we've overused it. We're looking at similar problems with vaccines. But back to my guest. This is a powerful individual that has brought the truth of vaccine dangers to his community, the African-American community. I've been on tour and met with him several times. We're going to get into vaccines and we're also going to get into some of the controversy around the Nation of Islam. So, folks, I want to bring in Brother Tony Muhammad, who is the Western chapter leader of the Nation of Islam. Tony, thank you for joining me today.

**[00:18:13] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

Man, it's my honor, Del. Really it is. It's an honor and a great privilege to be with another freedom fighter, standing with a man in yourself whom I've come to know over the years and know that a very, very sincere, a man who loves humanity, a man who wants to see all of our children safe. So thank you for this great opportunity to speak to you as well as your listening audience, because you know, the enemy of us all have divided us, have built walls between us, and a lot of people benefit off of having us at one another. And this is a beautiful time, you know, for those of us to come together, learn about the Nation of Islam for yourself. Don't go off of a soundbite on NBC, CBS, CNN. All of these particular medias are controlled by the very forces you and I have joined together to fight. And we are finding out we all have been duped.

**[00:19:17] Del Bigtree**

That's right. Yeah. One of the things I think is really fascinating about this topic, you know, there's the African-American community has been used, throughout time in testing vaccines. We know about the Tuskegee experiment, but a lot of times you were all on your own there. It was like, well, sorry about that. My mother is Native American. There's been similar things that have happened on reservations throughout time that are just, we as the upper class white folks don't really care if it doesn't affect us directly. What I think is incredible about this this vaccine issue is that it is bringing nations this is black, white, yellow, red, Catholic, Jewish nation of Islam, you name it. This is affecting all of us, which is what brings us together. But just really quickly, how did you get involved in this vaccine issue?

**[00:20:06] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

Well, about a little bit over a year ago, one of my associate ministers, student ministers, was talking to Lucy Cole, and there was a conversation to him that was unknown to us. We did not know anything about autism and black boys. And at that particular time, Lucy was trying to get Bobby Kennedy to get an audience. With some black leader that he felt was fearless and unafraid because Bobby Kennedy and others, Michel Ford, had gone to other black leaders and none of them. Would even listen to what they had to say, let alone get involved to make sure that this issue was not revisiting us. So I get a call from Rizza Islam and he said, Hey, you're not going to believe this, but Bobby Kennedy would like to have a conversation with you. I'm like, you're like you're talking about, like, Camelot Kennedy Kennedys. He said, Yes. I said, Well, what does he want to talk to me about? He said he's dealing with vaccines and black boys immediately red flagged. I said he wants to talk to me about vaccines and black boys. What about it? He said, listen, he's found out that there's a scientist who's saying that he lied and he's covering up the fact that he knows that a particular vaccine is giving black boys autism. Well, we were taught this in the 50s and the 60s from the Honorable Elijah Muhammad. He warned the members of the Nation of Islam and the black community at that time. He laid out what was a prophecy to us. He said, Be careful of vaccine. At that time, he said to no members, do not take the polio vaccine. He said, there are scientists in high places who are so wicked that they've come up with a genetic weapon that could wipe us out as a people while leaving others standing. That was the red flag. I said, So sure, I'll meet with Mr. Kennedy. I met with Bobby along with Bobby. That was Michelle Ford. That was Lucy Cole. That was Brian Hooker and a few others. I can't remember some of the other scientists that was there,

**[00:22:33] Del Bigtree**

A room full of other.

**[00:22:34] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

Room full of other whites, you know, And and as they laid out the science and as they gave me the documents, I was blown away, not surprised, but blown away that it was happening to such a level that our government won't even listen to white people. Not knowing that disproportionately black boys were suffering. 240% more. Then our white counterpart and I said to Mr. Kennedy, I have to take this to my leading teacher, the Honorable Minister Louis Farrakhan. And Mr. Kennedy said, I was hoping you would say that. I immediately got on the phone and called the Honorable Minister Louis Farrakhan and told him what who I had met with, what I had just experienced and saw for myself. And I asked him, would he be willing to meet with the delegation of people that I was meeting with. He said, Are you sure they want to meet with me? He said as much mud as the media has attached to me. He said, Are you ask them, Are they sure? Because I don't want to hurt their efforts. So I said, Mr. Kennedy Minister, saying, are you sure you want to meet? And they said, Absolutely. And he said, Well, bring them in. I'd be honored to meet with him. And a week later we met with the Honorable Minister Louis Farrakhan. At this meeting was Mr. Kennedy, of course, Michelle Ford, Brian Hooker, Barry Siegel, and his beautiful wife was there. And Eric Holden. Was meeting with the Honorable Minister Louis Gladen. Gladen Yes, that's right. Thank you. Thank you. Yeah. And it was so beautiful. In the meeting as the minister received them in his home.

**[00:24:32] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

And of course, when you go visit a man of his stature, you have to go through a security clearance and a security check to make sure no harms the weapons. And the minister put himself in the spirit as a student as he listened to the scientists, as he listened to Mr. Kennedy and the way he handled them, blew them away. He had to stop at one time because Michelle Ford was beginning to like cry almost because she was in such disbelief. And he stopped and asked her, Are you okay? And she said, no, this is incredible. I've been told. She said, I'm a I'm a white woman, but I have great discernment. And I was told that you are a hater, that I shouldn't come and meet with you. I'm fighting against my very husband who did not want me here. She said. And I am blown away. I know hate when I'm in the presence of it. And I don't see any hate from you. And I'm blown away at how I've been treated. And Minister Farrakhan said, Yeah, our enemies has done a great job in keeping us away from each other. He said, But because the attack now is on our children. See, he said, if there's any silver lining in this atrocity, the silver lining is now you're attacking our babies. All walls are coming down and people of goodwill are finding each other. Are we going to agree on everything? Heck, no. How could we? My experience is not your experience. And your experience is not my experience.

**[00:26:15] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

When I talk to my Chinese brothers, I mean, I understand nothing of what he has gone through in his life because I don't understand it from a Chinese perspective. But my God, at least I should listen to him. I should hear him so that I could understand him. And that's how we got involved. And after Minister Farrakhan heard these great truths and the science. He gave Mr. Kennedy. He said, Now I'm a spiritual man, as you are talking. And I'm listening at what you're saying about the pharmaceutical industry and how our government see have indemnified meaning in 1986, you know this Del, when Minister Farrakhan was told that our Congress passed a law where you can't even sue the vaccine maker.

**[00:27:05] Del Bigtree**

That's true. Yeah.

**[00:27:07] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

And that me and you as the taxpayer, I got a foot a bill for industry that's almost \$1 trillion in profit, but yet you won't stand behind your own product. Minister Farrakhan said, You know what? As you all was teaching me, I see that the pharmaceutical industry is the dragon in the Book of Revelation. You can find that in Chapter 12, where there was a dragon standing before the woman to cure her child as soon as it's born. And with the tail, the dragon brought down a third of the stars of heaven. And there are Sinister's group. You know me. And you've been in this rabbit hole. There are people in high places the Rockefellers, the Rothschilds, the DuPonts. See, they're in high places and they believe in population control. Could this be.

**[00:28:03] Del Bigtree**

I get that question a lot, and I always tend to say,

**[00:28:08] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

I know. Stay away from it.

**[00:28:09] Del Bigtree**

Because I don't know. My research hasn't gotten deep enough into that. But I do say that what we do know is that children are being poisoned, that children are being destroyed. Because I want to get to a lot of things. And I could talk to you for about four hours. I want to say that Minister Farrakhan has stood behind you and others in the Nation of Islam. As you've traveled, how many cities have you now traveled to? You So first of all, some of the players you heard about, Lucy Cole is a brilliant representative from the Church of Scientology. Bobby Kennedy, we know is one of the great environmental lawyers of our time that has fought to, clean up our air, our water as he says it. I've been fighting for years to get mercury out of fish. As soon as I try to get you know, no one ever called me anti fish, but I try to get mercury out of vaccines and now I'm an anti-vaxxer. And then Eric Gladen made a great movie called Trace Amounts, which you can see online as well as my film VAXXED.

**[00:29:10] Del Bigtree**

And we've been traveling the nation showing VAXXED in different mosques all over in large communities. Yeah. And I have to say, one of the shocking things for me because usually there's some you'll give a speech or, somebody else from the nation will step up and speak. And first of all, the the grace with which I'm received when I've been at these mosques, the language of the talks is so inclusive about all of us working together, coming together. And it just as Michelle Ford expressed in the meeting with Minister Farrakhan, I sit there in shock of this is not what I was told. The nation is, in fact, going a step further. You quote Jesus, you quote Moses. I thought I thought you guys study the Koran and nothing but the Koran, so help me God. What's going on? What is it I'm missing? Why are why is there discussion about Jesus and and how does the religion work then?

**[00:30:18] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

Well, well, as a muslim, the Honorable Elijah Muhammad was taught by his teacher, Master Fard Muhammad, that we are to believe in all the prophets, not just some Prophet. Muhammad is not the only prophet. And there's nearly a billion Muslims all over the world. We don't believe that Muhammad is going to return. We believe that Christ will return with God, not Muhammad. And we are to believe in the truth of any religion. See, all truth works together. It don't fight against each other. But there are some of us who take that truth and interpret it in a sinister way. Then that becomes what is damaging in America. Black people. Of course, you know, we wasn't we didn't come over here on a cruise ship. We came over here on a cruise ship. The worst treatment ever happened to any people in history, happened to wee black people in America. So we lost everything. Many of my ancestors were Muslims. You can get the movie Roots. Kunta Kinte was a muslim and the founding father said, Whatever you do, don't allow the black man to ever get back that religion because no Muslim will call another white man master. Only God can be master in your life. And so therefore, we were buried with the Bible. The Bible was used to make slaves out of us. There are scriptures in the Bible that the slave master used to carry out slavery, where they took and misinterpreted certain aspects of the Bible to verify their wickedness done in Jesus name. So therefore, we use biblical scriptures because our people don't know the Quran. So we speak the truths of the Bible as we know it, to impart it on our people, to get them to see better what has happened to us.

**[00:32:14] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

Because we believe that as a people we are to a chosen people of God. See, we believe that God saw us coming into slavery. We also believe that God also have worked it out where we will come out of her and come out of the condition that was heaped on us by our slave master without placing blame. We ain't into the blame game in the nation. We are into telling you the truth. But we will take responsible for our own condition. So that's why we use all scriptures. Brother, if I find some in Buddhism, if I see truth, I'm grabbing that. If I see some in Hinduism, I'm grabbing that. I've been among my Native Americans, brother. I've been in the inipi. I went in the sweat lodge. Oh my God, I see truth when you go in, Any and every Indian male have to know the suffering of a female. I see why I said, My God, I love truth. So we are lovers of truth and we will live on that truth and we will die on that truth. And we will fight for truth. Truth only. So that's what we have. And that's what's dangerous. When you got people in high places, Brother Del, that don't want to see you and I come together, they want you to look at me with suspicion. But this movement has caused us to come into contact with many Caucasian people who are quite surprised.

**[00:33:40] Del Bigtree**

Absolutely. I was raised you know, my father was a minister, but more of a new age minister. Many of you may or may not know that. And I was raised to think the same thing that we're divided by, all our religious leaders in many ways tend to speak to the things we disagree on and and separate us out. And I was raised to think that that really is that Satan right there that's that's or whatever, you know that thing is that divides us because there's so much that religion does agree on. And why wouldn't we be looking at that? I think about like, just not to wax too biblical here, but the Tower of Babel, you know what I mean? God sends us out. All of a sudden we are speaking different languages, we're coming from different places, and we have to go back to our place and use our language to speak. And I remember once talking to a friend of mine who, you know, was really, really focused on on he was going to be a Christian minister and great good on on you. But he had a real issue with Buddhism and Islam and all of this. And I said, in my thinking, your God actually is the one true? God is not as strong as I see my God, because your God only speaks to Christians, which is only, this sliver of humanity, a large one.

**[00:35:06] Del Bigtree**

But, whereas I think wouldn't God in the great infinite wisdom, speak to all different people in a way that they could hear it based on where they come from, what they're going through, Isn't it possible that God speaks through many different people? And yes, the message gets convoluted, by the messengers all the time. But I have a hard time believing that, like one of my issues has always been one of my big questions is, when when people say, you have to take Christ as your savior in order to be, find a place in heaven, my question is always, So you're telling me that if there's some person down in a tribe in South Africa or South America, or anywhere that never was introduced to Jesus, even as an idea. But all they did was get up every morning and treat everybody with love and respect, treated them as they wanted to be treated themselves, went out of their way to be helpful, one out of their way to be caring and loving and protect everyone around them. They live an entire life like that, but because they didn't know the name of Jesus. They're not going to heaven. I have a problem with with that delineation.

**[00:36:16] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

Even Jesus had a problem with it. He said there are many who follow me. That is, he admonished his disciples. See, that is the ugly attitude, The ugly attitude that hurts all of humanity is when one race or some ethnicity start thinking they're better. See, I'm better. That's the danger zone. That's the ego that is tearing up the world. You're not better. The Holy Quran say the best among you, is he or she who serves others.

**[00:36:47] Del Bigtree**

It's really.

**[00:36:48] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

Are you serving others? Are you putting others less fortunate than yourself on your shoulders, making no reputation of yourself? I and we in America suffer from the mindset. Listen, that what I'm saying, we suffer from the mindset of white supremacy where whites used to think because of their ethnicity that they was better than others. No, we're all created equally under God's eye. And the greatest thing you could do is be in the service of others. You don't come to somebody else's country and take it and kill them and murder them. And then you want me to call you God's people? You can't be.

**[00:37:30] Del Bigtree**

Okay. So so that that you know. So, that's great. And I want to go deeper. And one of the things I promise bring it all is, is death defying talk without a safety net. You are a beautiful person everywhere I go. I have friends just like Michelle. For anyone to say, how can you be aligning with the Nation of Islam? I'm Jewish. I'm, whatever, Buddhist or whatever it is. But, specifically whites, Christians, Jews. And by the way, I hope that no one thinks that. I'm not saying that, that that Christianity isn't beautiful or that Christ and that representation isn't beautiful religion or that you shouldn't take Christ as your personal savior. I just think that we just like vaccines or any other discussion. We've been pigeonholed into bumper sticker ideas of what life is. When you really need to read the Bible yourself, you need to you need to take in the words of Jesus yourself, not just have some minister you visit once a week that tells you what parts of it they want to tell you. Our job is to take in the words ourselves just like the same thing in the medical community. Don't just take your doctor's word for it. You need to ask for the insert wrapped around the vaccine itself and read it yourself.

**[00:38:43] Del Bigtree**

You are the most powerful decision maker in your life and the lives of your children. Nobody else. At least that's how I was raised. My parents raised me that nobody sits above me in my decision making if something feels wrong in me. They taught me trust that instinct. There is not a diploma out there that overrides what you think about yourself or what you know or what you can investigate. There is not a book, a Bible, a Koran, or anything that somebody thumps on and stands and says, I'm the one that's going to tell you what this means. You should decide what it means. And so that's really where I'm at. And every time I see you speak, I feel that. But, it's easy to say, okay, great, this all sounds well and good. You sound amazing. But there are terms. There's things that have come out of the Nation of Islam that I can't wrap my head around, like referring to, Jews sometimes or whites as white devils. Okay. What does that mean? How how am I supposed to get along with you? How are we going to divide this in unless I'm wrong? That's language that has been used in your community, correct?

**[00:39:53] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

Sure.

**[00:39:53] Del Bigtree**

And what does white devils mean? And how am I, as a white person, supposed to be okay with that?

**[00:39:58] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

Great. Thank you for asking that question. Because this this is the basis of us learning each other. Now, I have to give you it from a historical context, as I have been taught by the Honorable Minister Louis Farrakhan. And I'm glad you are asking these questions. There's a lot of Caucasians who are upset. You all call us devils. Really? What happened when we were being called niggers.

**[00:40:25] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

See. And your people was not upset about it. You're looking at a time when the Honorable Elijah Muhammad got Islam. It was 1930. We were being lynched in the South. We was being killed by police officers. So the Honorable Elijah Muhammad was taught generality, call them all devils, see? And the good ones, if they're not, that will come forward. See? So it's almost like karma. Can you, as a group, not as individuals, because there are some Caucasians who say, Well, I didn't have anything to do with your slavery. Well, let's look at it from a biblical context. It says that the sins of the fathers will be visited on their children. So the Honorable Elijah Muhammad was put a mirror up in front of white people. Let's let them see how it feels to be called some of the damnable things. You know in your heart you are not.

**[00:41:25] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

So to say you all are devils, how can it be that we're devil? Only a devil will bring people into slavery. Where the Portuguese, the Dutch and the Englishman was raping my grandmother's. 100 million some scientists and scholars have said there's 100 million of my ancestors who was murdered and killed on the way over here from slave ships. What do you call those people? Angels? They were devils. You bring me here. My people here to the shores of North America. We had names. We had a religion. We had a language. You took our name. You took our language. You took our culture. You made us subjugate to you. You made us bow to you. What do you call those groups of people? Angels. They're devils. See,

**[00:42:21] Del Bigtree**

I do.

**[00:42:21] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

So. So. So therefore, in the 30s, 40s and 50s, you know, and during the power movement of the 60s, we were being devastated. There was laws, Brother Del on the books that backed this kind of treatment of black people. And even the few whites who would try to help us got attacked. So the Honorable Elijah Muhammad in the 30s and the 40s and the 50s was saying, Let's call them all devils. And then the good ones will show that they are not. And so many could not take what you dish out, even though now we are not taught that the Honorable Minister Louis Farrakhan said that the Honorable Elijah Muhammad told him in the 70s. Now we can stop using the term the white man is the devil. See?

**[00:43:09] Del Bigtree**

Okay. But then let's get to what quotes that we do have from Elijah Muhammad himself. I don't and correct me. And these are these are online. I'm not I don't know anything about I just jump online and say, well, here's what we're thinking about. We have this line from the Minister Farrakhan. The prosecutors are liars, the judges are liars. The forensic specialists all are conspiratorial and getting a white person off. They have killed us, but they have never had to pay the price. The law of retaliation that's in the Bible and in the Qur'an says it is a prescription retaliation violence. And another quote, "a prescription for us is those who kill us and seem to get away with it. We cannot allow it to continue. We must rise up and kill those who kill us outside of the law of justice. And when they feel death, like we feel death, when they feel pain at the burying of their dead, like we feel it, then maybe we can sit down to a table and act like civilized people." Now, first of all, did Minister Farrakhan make that statement?

**[00:44:14] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

Absolutely.

**[00:44:15] Del Bigtree**

Okay. And can you please tell me what you meant by it?

**[00:44:18] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

Let's look at the context, because what you're dealing with is, is universal principles. You're not dealing with just his word. You're dealing with a universal law. At that time. And since we've been here. And our community know it all so often in whites. Whites don't live the black reality where whites are taught to respect the police officers. We in our community have been taught. As a boy, I'm from Georgia. We were scared of police officers. My mother taught me that they will kill you. They have always been to us what German soldiers have been for Jews, that uniform alone has been oppressive to us. So at that time, what people don't understand, or maybe you do, it was at a time when black men. Was being killed by police officers in this country. We had Castillo in Minnesota, man sitting in his car with his girlfriend and his child in the back, and a police officer unloads on him. We had Tamir Rice, a 12 year old boy in a park playing with a toy gun. Police officers pull up on him and in less than five seconds, murder this boy. He's 12 years old. Mike Brown, they tried to make him guilty.

**[00:45:40] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

Mike Brown, they said he stole some. Now they're telling us he didn't steal it. He paid for it. But yet he's dead. We have our brother, Lamont Smith in South Carolina was seen running from a police officer. The police officer shoot him in the back and plant a gun. Del. That's all day, every day in the black community. And then you have the forensic specialists. They lie to protect the police officer. You have judges who lie to protect the police officers. And so what Minister Farrakhan is doing, he was warning white America and he was warning America in general, just like your founding fathers, when they was put in the 13 colonies by the British, they kept warning the British. Taxation without proper representation is tyranny. You all are mistreating us in these colonies. Stop it. We're about to explode. We're about to blow up. The king wouldn't listen. And so a group of white militias formed dressed up like Native Americans to hide their identity, went to the Boston Harbor, threw tea over, burned it, rioted to get the king's attention. He still didn't listen Del. So 70 white militias start killing the British soldiers. That's when the king paid attention.

**[00:47:06] Del Bigtree**

You're saying we got to start killing cops, though? I mean, come on, Tony.

**[00:47:09] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

Listen, listen, let me finish, okay? Because what I'm telling you know, you ain't got to do that. But if you don't give a person's justice and if you won't hear our grievance in a court, the Honorable Minister Louis Farrakhan said that creates an imbalance in people's minds. We can't get justice. So the Bible says truth had fallen to the street and justice stands afar off and equity cannot enter. You make a people drive insane that we give you all of this privileges of being our police officers or being our court. But yet when we show up to court, the court just assembles a woman with a scale, with a napkin over her eye. But it seems like when black people come, she's peeking from under the napkin to see what color you are. We get no justice, sir. And the minister said, Now this is driving my people crazy. See, Then there's another scripture. And let me tell you something. White people do this all the time. Anybody who attack you, you attack them back. Even if you think they did it. See. In New York, 9/11. Saddam Hussein didn't have nothing to do with that. But look at how white America was in a frenzy. Yeah, go attack him. And we found no weapons of mass destruction yet. Nearly a million babies killed. Who's going to hit those mothers grievously when they say, hey, you didn't find no weapon, Who's going to pay for this? And you drive that people crazy. Out of that came ISIS. And it seems like people, no matter who they are when you're mistreating another group, seem like we can't get your attention until you start feeling what we're feeling.

**[00:48:49] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

That's all he's saying. Karma is about to catch up with you. As you have done the Bible say so shall it be done unto you. If you live by the sword, you're going to die by the sword. If you won't listen to our grievance. Look, Del. Ever since 1950, we've been marching on Washington. Guess what the march has been for? Justice and jobs. Justice? We've been doing this, bruh. And as I said to some of my new white found friends in the movement, I said when I dressed like this as a black man, it makes white people comfortable. But I could take and put on a baseball cap and a hoodie and get on an elevator. And I watch white women and people cringe. It blows me away. So the minister, as a spiritual man, he's a Warner. He's saying, listen. And he didn't say kill all white folks. He said, listen, if a white police officer takes advantage of his badge and murder innocent people. And he gets away with it. And all of the evidence pointed that he got away with it and all he did was said, I fear for my life, but yet it was excessive force. He said no. One day we should kill those. He read what you said who go outside of that law. That's all he said. And we should hunt that person down.

**[00:50:10] Del Bigtree**

Okay.

**[00:50:11] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

See?

**[00:50:11] Del Bigtree**

Yeah. Alright. We only have a few more minutes, and I am sure there are people out there in our audience that would like to throw some questions in here. This is a part of my show. I call Ask Del anything tonight. We can also ask Tony anything. I do want to say that, look it, Native Americans have had some of the similar issues, my mother's side of the family, just an inability to get any fairness in court. We just watched Standing Rock. We had, thousands and thousands of people stepping up from from our native peoples and joined by military forces and everybody saying, please, these are burial grounds. This is our rivers, this is our water, this is the blood of this earth. Please do not poison it with some oil pipeline that frankly, is not even Oil for America. It's a Canadian company that's trying to send this oil to China. Why do we have to risk our rivers, our waterways, our sacred lands and our native peoples? And they do what's right. They stand in peace. They stand there. They don't fight. They stand there in peace. They try to use the judicial system and it just works against them. It never, never works. So and.

**[00:51:16] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

When it don't work,

**[00:51:17] Del Bigtree**

What answer do you have when.

**[00:51:18] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

It don't work, what does that do to the mind of a Native American warrior who's saying enough? Is you going to you're going to make me look at these mothers I've met mothers of all color.

**[00:51:29] Del Bigtree**

Yeah, you mean especially on the vaccine issue.

**[00:51:31] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

You are attacking their baby? You're dealing with a bear now. You're dealing with a mother that out of her love, she will hurt you. You may say that. She shouldn't have done that. Really? Stop it. We got to stop this mamby pamby soft stuff.

**[00:51:46] Del Bigtree**

Let's be honest. Let's be real.

**[00:51:47] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

You got to be honest and be real. You keep attacking me. I got to fight you back.

**[00:51:51] Del Bigtree**

Do we have some callers? Alright, great. So, just really quickly, I know that there was a professor that recently asked her class as mostly white. Raise your hands if you would, trade, your position with someone in the black community. And no one raised their hands. I don't think it's a mystery that clearly, driving while black is an issue in this nation. And while it is, there's going to be a lot of questions on how to best deal with that. But let's go to our callers. We have a caller out here. I think we're going to have to hear from this thing. So let's see if we can hear it here. Okay. Caller, are you there?

**[00:52:27] Diana, Caller calling in for "Ask Del Anything"**

Yes, Diana. My name is Diana.

**[00:52:30] Del Bigtree**

Okay. Diana.

**[00:52:31] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

Diana.

**[00:52:33] Del Bigtree**

What's your question?

**[00:52:34] Diana, Caller calling in for "Ask Del Anything"**

I, I it's more of a I have more I'm requesting more advice. How do I go to my church and other churches, um, and start the conversation without, you know, them looking at me crazy, you know? Um, I do come from the Adventist church with that has hospitals, you know, So I don't want to be looked at as, You're crazy. How do you think that you know more than everybody else, you know, And are you talking about, you know, talk to the pastors.

**[00:53:09] Del Bigtree**

You're talking about the vaccine issue and you want to have this discussion brought up at your church. I think Vaxxed is a great place to start. And it's a very, very simple movie. Take the film in and just hand it to your pastor or minister and say, look, it just like the tobacco industry. We have a whistleblower now in the top, the most important health agency in the world that's come forward and said that they are committing scientific fraud and go ahead and look up a group called Spider. Huffington Post put out an article. There's 12 more scientists now at the Centers for Disease Control that reference themselves as Spider. And they basically put a letter out through a lawyer to the press saying, we are manipulating our data studies. We are lying about the safety of all the different types of studies we're doing, because this wasn't just vaccines. This was in other departments around the CDC. They're basically begging the media or somebody to come in and clean up this cesspool of corruption. There is a cesspool of corruption at the CDC. That's where this conversation begins. And then I would ask some some questions of your minister, depending on how old they are, do you remember 4 or 5 kids in every classroom having asthma? Do you remember 4 or 5 kids having Add ADHD when you were a kid in your classroom? Did they have diabetes running rampant? Were they covered in eczema? 4 or 5 kids? Then childhood cancers and autism has gone from 1 in 10,000 to 1 in 45.

**[00:54:36] Del Bigtree**

God has given us the ability to think for ourselves. I think about the Garden of Eden. I think about that moment where Satan says you must be clothed. And God said, Who told you you were naked? I would say, tell you, ask your minister, who told us that we could not live on God's planet or in Eden without being vaccinated with now 72 vaccines. I think it's a similar story. Much of the Bible, I believe, is an allegory, or it can be looked at different ways as Minister Tony Muhammad has pointed out. Thank you for your call. Do we have another caller I'm going to jump to? Is that it? So just shortly you've been out on the road. You're meeting you've been to what, I think now 30 different.

**[00:55:20] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

Yeah, nearly 37 cities I have been to because the black community was unaware that there could possibly be another Tuskegee experiment happening all over again in. Every city I've been to, it's been nearly to capacity of standing room only. And, you know, when I go into the black community, I'm going into the blighted areas, the poor areas where literacy or the illiteracy rate is so high that many in the black community didn't even know what autism meant. And so when I when I show VAXXED, oh, my God, look, just looking at the documentary itself. It is the most powerful tool that any of us, in my humble opinion, can have. See, it has nothing to do with the color of your skin. It just deals with the facts. And it has been an eye opening experience that now I got a double back. Every city I've gone to now is calling me back with hundreds, even thousands of more people who want to know more about this.

**[00:56:26] Del Bigtree**

And is your experience are there parents that perhaps had an injured child that didn't know it was vaccines prior to the film? Because I get that a lot as I travel around, mothers come up and say, the first time I saw this film, my child has Add or ADHD or it has sometimes high functioning autism or autism. And they said, I had no idea what had done it. And but then after your film, I went back and looked at their vaccine records. And just as you're saying, the problem started right after one of their vaccinations.

**[00:56:56] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

Now 80% of the mothers. There was one city I was in Saint Louis, I believe it was. I heard a woman screaming in pain. When she saw the film. The documentary. And she was like, Wow. I thought my child was just hyper. I didn't know it was autism. And she said, when I went to the doctors, the doctor told me it was me. I genetically gave that to my child, she said. I knew there was nothing wrong with him. He was walking, he was talking, and she was devastated because she said as a result of a doctor that she believed in more than her God. She then had a hysterectomy because she didn't want to have any more children. And that's the pain, man. I'm going to tell any man, I don't care what your color is. When you see a woman's pain when it comes to her baby, it does something to you, Del. You know, that.

**[00:57:56] Del Bigtree**

Sure does.

**[00:57:56] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

And that's what makes this fight so noble that we're fighting for our babies. And it has been devastating. It's hard for me to go from city to city because I have to prepare myself to get ready for the pain that's going to come at me.

**[00:58:10] Del Bigtree**

Well, Tony, I really appreciate you coming in and joining me. Man,

**[00:58:13] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

What an honor.

**[00:58:14] Del Bigtree**

Joining me, man, you hopped on the wire with me today. Those are some tough questions. Oh, no. Obviously, we could go on for hours and hours and hours. And I wish you I know that you want to go deeper out there, but we only have one hour. But I hope you get a sense of where I want this show to go. There are issues in vaccines. There are issues in the pharmaceutical industry, but there's issues about humanity. And I am not going to shy away from the hard questions. Well, you heard some of them today. Brother Tony, got behind it. But the truth is, is it is time for us to start asking each other the hard questions.

**[00:58:47] Brother Tony Muhammad, Western Chapter Leader, Nation of Islam**

That's right.

**[00:58:47] Del Bigtree**

We have been duped in this country, this idea of being politically correct, of not discussing religion, not discussing science or the difficult issues at our Thanksgiving tables, at our Sunday dinner tables. That is why we find ourselves in the trouble we're in in this nation, because we have a government that has gotten away with literally murder in many, many different ways.

**[00:59:09] Del Bigtree**

And if we do not start communicating with each other and discussing these issues with each other, then how can we make a difference? This is a democracy. Democracy means it's we the people that decide what this nation represents. When we're bombing other countries. That's we the people making that decision. You cannot just put it on a Donald Trump or a Hillary Clinton or President Obama. These are people we've elected. They're representing us. And if we are not happy about how we're being represented, we are the ones that can do something. We still have a nation where we can vote. We still have a nation where we can stand up, rise. We still have people that are allowed to read the Koran, the Bible or a vaccine insert. Do that when you make your informed choice, and this will be a better country. Thank you for joining us on Highwire today. We'll see you next week at 11 a.m.
