

NAME

EP 348 11/30/23.mp4

DATE

December 4, 2023

DURATION

1h 40m 49s

15 SPEAKERS

Del Bigtree

Aaron Siri, Head Legal Counsel, ICAN

Jefferey Jaxen

Dr. Maria Leptin, President of the European Research Council

Tedros Adhanom Ghebreyesus, Director General, World Health Organization

Richard Fico, Slovakia's Prime Minister

Male Speaker

Robert Schelske, Member of the United States Army

Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

Donald Trump, 45th President of the United States of America

Female News Correspondent

Male News Correspondent

Jennifer Garner, Actress

Anthony Fauci, Director, NAID

Female Speaker

START OF TRANSCRIPT

[00:00:05] Del Bigtree

Did you notice that this show doesn't have any commercials? I'm not selling you diapers or vitamins or smoothies or gasoline. That's because I don't want corporate sponsors telling us what to investigate and what to say instead. You're our sponsors. This is a production by our non profit, the Informed Consent Action Network. If you want more investigations, more hard hitting news, if you want the truth go to ICANdecide.org and donate now. Good morning, good afternoon, good evening. Wherever you are out there in the world, it's time to step out onto the Highwire. Welcome, everybody. We had a lot of fun this week. In fact, we started a little bit of a war on Twitter or X you've decided to take on the new moniker, how did we do it? Well, we just put a little video that looked something like this.

[00:01:12] Aaron Siri, Head Legal Counsel, ICAN

The CDC finally listed 20 studies that they rely upon, they say, to claim that vaccines don't cause autism. For the vaccines given in the first six months of life, I can only assume they think we don't read or something, but we do. So we read the 20 studies. Here's the thing about them 18 of them involve thimerosal, an ingredient not in any of the vaccines we asked about, or the MMR vaccine not given until at least one year of life. One of them involved antigen, one of the studies, not vaccine exposure, and that study even says it cannot tell you whether vaccines don't cause autism because it didn't study them. The only review or study they provided us that actually involved a single one of the vaccines given in the first six months of life was a study by the Institute of Medicine that found we don't have a single study of whether DTaP does or doesn't cause autism.

[00:01:56] Del Bigtree

Well, I mean, it was innocuous enough. That was actually just an excerpt from the show that we aired during Thanksgiving last week. It came from the Freedomfest presentation that Aaron Siri and I gave together, talking about the experts that were under oath. But, Twitter wasn't having it, or at least their community response popped up on our feed. This is what that looked like community notes. And it says CDC couldn't. This was our point. And here's what they said. "Vaccines do not cause autism. Countless studies have shown no link between vaccines and an increased risk of autism spectrum disorder." And then they posted three, I guess, studies. Now, what's funny about this is we weren't saying that vaccines do cause autism. What we're saying and talking about is the fact that we sued the CDC when they refused to tell us what studies they relied upon to make the statement that all vaccines don't cause autism. We were specific about the first six vaccines in the first six months of life, which is hepatitis, rotavirus, diphtheria, tetanus and acellular pertussis, Haemophilus influenza, pneumococcal conjugate, inactivated polio vaccines. We said of all those, which one of these because you're saying all vaccines don't cause autism. Just show us what studies you did to make that statement. They couldn't provide anything. But apparently, under these community notes, they thought that they had some studies and they posted them.

[00:03:22] Del Bigtree

Well, we responded to that. And this is what we wrote back. Would our community notes please provide the studies that our regulatory agencies relied upon to make the claim? Vaccines do not cause autism for the vaccines administered in the first six months of life. We put it out there again. Cdc couldn't do it. Maybe you people can, but you're not doing it here. Also, please tell us where we make the claim vaccines cause autism in this post. This note doesn't address the facts laid out in the video at Elon Musk. What say you? And so for a little while they took down the community notes. Now I'll tell you, those three studies didn't address our question at all. They were totally irrelevant. But eventually they came back and this time they had five studies. And by the way, hundreds of thousands of views now going on in these different exchanges. Vaccines do not cause autism, they said. Again, countless studies have shown no link between vaccines. There it is again, all vaccines and an increased risk of autism spectrum disorder. Again, we weren't saying that the vaccines cause autism. What we were saying is what studies prove they don't. Now let's very quickly, since these geniuses have now added five studies and imagine this oh, seven studies, it must be coming from all over the world. Now, this is not just a question going to the CDC, which is the lawsuit where we basically prove they did not provide a single study, but now the whole world is weighing in on it on Twitter, and they've come up with seven studies.

[00:04:46] Del Bigtree

Why don't we walk through those? Remember, we want the vaccines in the first six months of life. So let's take a look at these seven studies. The first studies is a measles, mumps, rubella vaccination and autism study, a nationwide cohort study. The measles mumps vaccine was not given, is not given in the first six months of life, has nothing to do with what we're talking about. Next study is exactly what the CDC did to us. By the way, prevalence and characteristics of autism spectrum disorder among children aged eight years. This is really just talking about the prevalence of autism. But here's what's interesting. This is "recommendations for the ADM network include enhancing strategies to number one, lower the age of first evaluation of ASD by community providers in accordance with the Healthy People 2020 goal, that children with ASD are evaluated by age 36 months and begin receiving community based support and services by age 48 months." And here's what's interesting about that. We are now diagnosing children with autism at a much earlier age than they used to be diagnosed. It used to be after four years old was when they would really start finding it. But now they're shooting for three years, 36 months. And so this is why we thought, when we asked for the first six months of life, we thought, well, we shouldn't we really be looking? If it's this early that they're diagnosing, then it would be those first vaccines.

[00:06:07] Del Bigtree

If vaccines cause it at all, then you would see it from these first six months of vaccines that are given over and over and over again. And if you're going to say vaccines don't cause autism, those are very important. So that's why they've lowered this age of diagnosis. Meaning let's not look at the ones later on. Let's look at the early ones okay. But has nothing to do obviously with our question early exposure. Here's another one. "Early exposure to thimerosal containing vaccines and children's cognitive development." There is no thimerosal in any of the six vaccines that are given the first six months of life. Totally irrelevant to our question. Next study "prenatal and infant exposure to thimerosal from vaccines and immunoglobulins and risk of autism." Again, no thimerosal in the vaccines that we have a question about. So again, totally relevant. And remember that at a certain point, thimerosal was taken out of most of the childhood vaccines because they say, oh, it had no effect. But when they were confronted with it, they recognized, saying mercury is safe. To be injected into you isn't a really good argument. So why don't we take it out anyway? It is still in the flu shot, and it's given to pregnant women and getting into developing fetuses and young children if they get that flu shot.

[00:07:19] Del Bigtree

So thimerosal is still out there, but mostly not in the childhood vaccines, and definitely not in the first six months of life vaccines. So totally irrelevant. Next study again. "Neuropsychological performance ten years after immunization infancy with a thimerosal containing." But you see how this goes folks? This is the whole point. They're not answering the question. Let's get another one here. Thimerosal exposure. Alright. You get the idea. Next one I think this next one is interesting. "Vaccines and autism." This is the last one. And this is basically an attack on the only study that it really that has been done from this side, which was the study by Dr. Andrew Wakefield. Now he always comes to the center of this conversation. And so this is what they have to say about that MMR Lancet study. I think it's kind of interesting. This is what they say themselves. "The Wakefield paper, published in 1998, was flawed for two reasons. About 90% of children in England receive MMR at the time this paper was written. Because MMR is administered at a time when many children are diagnosed with autism, it would be expected that most children with autism would have received an MMR vaccine and that many would have received the vaccine recently. The observation that some children with autism recently received MMR is therefore expected."

[00:08:41] Del Bigtree

"However, determination of whether MMR causes autism is best made by studying the incidence of autism in both vaccinated and unvaccinated children. This wasn't done." In fact, this really has never been done, which has always been our argument. "Although the authors claim that autism is a consequence of intestinal inflammation, intestinal symptoms were observed after, not before symptoms of autism, in all eight cases." I want to just make this point. What they're trying to tell you is that these parents are blaming the vaccine, but that's when they're diagnosed. The problem with this is the Lancet study was not about parents who were finally being diagnosed. It's about parents that said, my child regressed into autism days or weeks after getting the MMR vaccine. It wasn't like, oh, my child's been autistic for two years, and I've been trying to get the doctors to finally admit it, and they tend to do that right at the age they just got their MMR. No, they're saying my child turned into a different child right after the MMR vaccine. So this statement is absolutely, totally bogus. I've done plenty of shows. Go back and watch the brilliant interviews I've done with Dr. Andrew Wakefield, who also was the director of the film. That puts me in the middle of this entire conversation, Vaxxed from cover up to catastrophe, which you can find on our website and watch that for free.

[00:10:04] Del Bigtree

But I want to say this. Now the entire world is weighed in on this Twitter battle here, and they are still having the same exact issue. You are told there are mountains of studies showing that vaccines do not cause autism. We asked about the first six vaccines given the first six months of life and no one not the CDC and not every scientist across the world now weighing in on this can provide you with one study that compares the vaccinated to the unvaccinated, and especially those that got the first six vaccines, to those that didn't get the first six vaccines and say, look, we've proven they don't cause autism. So we are saying, and we continue to say this statement that you are making, that vaccines do not cause autism has no basis in provable science whatsoever. Now, we are not going to say that vaccines do cause autism. What we're saying is you can't say they don't. And once again, now a worldwide attempt to try and take our statement down. They have failed. They can only go to older vaccine, thimerosal studies and MMR studies. And we've covered why those are a fraud, including at the center of Vaxxed, one of the most fraudulent studies ever done. And it's the last study ever done in the United States of America that our government funded. Looking at the question, do vaccines cause autism? And specifically, does the MMR vaccine cause autism?

[00:11:38] Del Bigtree

If you've watched VAXXED, you know, there's a whistleblower inside the CDC named Dr. William Thompson. He's still there. He's protected with whistleblower status, and he provided 10,000 documents that they asked him to destroy. Why? Because it showed a very, very strong correlation between getting the MMR vaccine and an increase in diagnosis of autism. And so that study was fraudulently manipulated. And that manipulated study was the last time in 2004 a single dollar was ever spent by our government investigating this issue. So now the world is weighing in. They have no studies to prove it's not happening. Meanwhile, autism is going like this still, when you look at some of those studies that are pointing to, they're talking about 1 in 250. 1 in 150. It started at 1 in 10,000 when they first started recognizing it. We're now at about 1 in 30, 34, depending on what study you look at. And when we look at boys where it's more prevalent, autism is now seems to be affecting somewhere between 1 in 18 and 1 in 20 2 to 24 boys. This is one of the greatest epidemic pandemics, whatever you want to call it, of our lifetime. No science can prove that it's not being caused by vaccines, and our government has stopped funding any investigation into that correlation, even though they cannot prove a single study. So here it is to the whole world one more time.

[00:13:10] Del Bigtree

Can anyone provide a single acceptable study showing that the first six months of vaccines do not cause autism, and especially the DTaP vaccine, which parents have been complaining about. In fact, it's one of the number one vaccines complained about. My child regressed into autism right after the DTaP vaccine. When we look at the Institute of Medicine that looked at it, and we find after 30 years of parents complaining about that, that our US government, the NIH, the CDC, the FDA, none of them have ever done a study investigating DTaP vaccine and its correlation to autism. That is egregious. That is absolutely horrific. And we will continue to press this issue until the end of time, until we get a president in our government that decides to put someone into the NIH that will actually start doing proper vaccinated versus unvaccinated studies to look at a whole lot more than autism. How about asthma? How about Add, ADHD? How about lupus? How about leukemia? How about cancer? How about this incredible rise in autoimmune disease that is just absolutely crippling the children in America today? Our children are sicker than they have ever been. We went from 1 in 12, basically one in I mean, one in. Was it. Yeah. 1 in 12. Here we go. Thank you. 11 doses, 12.8%. Chronic illness. In the 1980s, when we were giving 11 vaccines, 53 doses in the 2000. And now we have 54% of chronic illness in our children.

[00:14:42] Del Bigtree

This means that more than half more than 1 in 2 children are suffering from an illness. They will have their entire freaking lives, either a neurological disorder or an autoimmune disease. That is the greatest decline in human health ever recorded. And it's on the back of the rise in our vaccine program. I'm going to continue to drop the mic on this until someone decides to do some real science. Alright. We have a huge show coming up and talk about putting it on the line. I suppose if I keep doing this someday, someone in our government might decide to sue me for \$500 billion. Seems crazy, right? My guess coming up, that's exactly what happened. Eric Nepute was sued for \$500 billion by the US government for talking about how to handle Covid. You're not going to miss that interview. But first, it's time for the Jaxen report. Man, I'm so tired of hearing this. Like mountains of evidence have shown. There's not a mountain Jefferey. There's not a hill. There's not a molehill. There's not an ant hill. There's not a grain of sand that they can point to right now that proves that vaccines, plural, do not cause autism. It's incredible that we find ourselves in this position now, but luckily, so many people around the world are starting to wake up to this reality after this debacle of Covid.

[00:16:12] Jefferey Jaxen

Yeah, it's become if it wasn't so serious, it's become an exhausting conversation. But a lot of people are ready to hear this story because the science is simply not there. But for anybody watching this show, they've known that we've been front running this investigative pulse of the scientific and medical realities over the last three years. Specifically on government orders concerning lockdowns, masking, school closures, vaccines. Do they supposed to stop transmission, reach herd immunity? Well, it's a rare week when government agencies and scientific journals and corporate media all come together at once and say, hey, you were right. So let's check this out because we're getting tired of saying we were right. But it's all happening right now. So let's go to the Guardian. Let's take a look at lockdowns. "People who stuck by UK Covid rules have worst mental health, says survey. Trauma of pandemic having lasting impact on people's mental health. Three years on, research reveals." Let's go into the article and see what it has to say. It talks to the articles lead, the study's lead author. "It says the more individuals comply with health advice during lockdown, the worse their well-being post lockdown, concluded Dr. Marley Willigers and colleagues in this study. They did, he says this "they identified that people with communal personalities who are more caring, sensitive and aware of others needs adhered the most rigorously with the lockdown protocols that Boris Johnson and senior medics and scientists recommended. However, people with agentic personalities who are more independent, more competitive and like to have control over their lives were least likely to exhibit those behaviors. Communal types displayed the highest levels of continuing disturbance to their mental well-being. However, agentic people, had the have been able to bounce back better from lockdown mode."

[00:17:59] Del Bigtree

It is basically just saying that sheep haven't done so well in. The lions are doing just fine, right?

[00:18:06] Jefferey Jaxen

And so forget about Build Back Better. It's about bouncing back better. And how do you do that? Well be independent, question your government, take control over your own health and your own lives. And that's science. So now let's move to.

[00:18:19] Del Bigtree

Don't fuel your inner OCD. Don't fuel your fear of crowds and people around you. As it turns out, that just doesn't lead to good future mental health. There's a newsflash.

[00:18:32] Jefferey Jaxen

Right. And so let's talk about masks for a second. We've exhaustively covered this. We were told, put your mask on. It's going to help with community transmission. It's going to keep you from getting less symptoms, less Covid infections. Well, here's another study. This was out of Norway. And this is the headline "association between face mask use and risk of SARS-CoV-2 infection." Pretty simple. They looked at over 3200 people and they concluded this. "We found that the incidence of self-reported Covid 19 was 33% higher in those wearing face masks often or sometimes, and 40% higher in those wearing face masks, almost always or always compared to participants who reported wearing face masks. Never or almost never." So we're done. Masks are over. I don't care what's coming from China, it's over. You're not going to get people to put these masks back on. So now let's talk.

[00:19:20] Del Bigtree

I was at the airport this week. And I really wanted to just I wanted a little card just to hand him that study. Just say just just just say you know.

[00:19:28] Jefferey Jaxen

Yeah. So let's talk about school closures. This shockingly, is the New York Times. Here's the headline here. The startling, "startling evidence on learning loss is in." And this isn't some rogue reporter at the times. This is the New York Times editorial board. The Brain trust all got together and said, this is an important, startling piece of evidence we just found. Let's look at what it says in there. "It says the evidence is now in and is startling. The school closures that took 50 million children out of classrooms at the start of the pandemic may prove to be the most damaging disruption in the history of American education." Well, if you're reading that and you're a New York Times reader, you may say, well, that's that's revelatory. I haven't seen that from the times, because I'm used to hearing the times say this in 2021, "parents, stop talking about the lost year. Teenagers and tweens will be fine, experts say if adults model resilience." That was after a year of keeping kids out of school. Parents were trying to get these kids back in school saying, look, suicide rates are up, mental health is going down. Our kids were missing a valuable learning our whole last year. What are we going to do? Hey, New York Times says stop talking about it.

[00:20:36] Jefferey Jaxen

It'll be fine. And now they're saying this is the worst disaster in the history of education. Fittingly enough the New York Post, who's been doing some great, great writing and investigation over the last three years on this, had a little dig at the New York Times. So this is their headline. This is by the post editorial board. The "New York Times discovers school lockdowns and learning loss three years late." And pretty great article if you want to go check it out. But just to remember, just to put a little, little asterisk here, not just move through this fast. Parents wanted kids back in school so bad. Parents wanted they were sounding the alarm. They're going to the school boards raising. You know what? At these school boards, this was the headline. They were called domestic terrorists, "white House aided school board groups. Domestic terrorist letter before Garland seek FBI on parents." That's a national school board association. The white House. White House aided that NSB bas call to label them domestic terrorists. That's if they were to do that. They can use the Patriot Act on them. That's how far we fell during this pandemic.

[00:21:41] Del Bigtree

Amazing.

[00:21:42] Jefferey Jaxen

So let's move that out of the way. Let's go to vaccines really quick. Remember, it's supposed to stop transmission, herd immunity. Well, eight more members of the European Parliament have sent another letter to the European Medicines Agency. The EMA is very similar to the CDC. It's kind of like a mixture between the CDC and the FDA here in the United States. But they're responsible for authorizing these vaccines in Europe. And they wrote to them and said, we have questions about your authorization. You authorized it, but it's not stopping transmission. It's not doing these things. What do you have to say about that? Well, this is what they wrote back to these members of Parliament. They said this. "You state that based on the authorized indications, the vaccines should only be administered to individuals who seek personal protection, and they are not authorized for the purpose of reducing transmission or infection rates. Transmission control. You also stated that the authorized indication does not align with uses promoted by pharmaceutical companies, politicians and health professionals." Say this. "You indeed are correct to point out that Covid 19 vaccines have not been authorized for preventing transmission from one person to another. The indications are for protecting the vaccinated individuals only." Think about this.

[00:22:53] Del Bigtree

you want to talk about a smoking gun? There it is. That is the greatest admission of propaganda use on people. The entire thing. Get the vaccine to protect your neighbor, to protect everyone around you, stop transmission. It stops with you Rachel Maddow said. So did Tony Fauci and Joe Biden. And now when you look in Europe, they're saying, hey, when we asked about it, when you signed this contract, were we promised it would stop transmission? No, nothing of the sort. No, we never we never agreed. We never believed it would stop transmission. It's unreal. We now know I mean, this takes it another step, right? We know because of the interview done of Janine Small, who stood up there representing Pfizer when asked, did you test to see if would stop transmission? She says, no, of course not. We were moving at the speed of science. So now you know they didn't test for it. But even more outrageous is the government body that funded and paid for this. And the health agency knew it didn't stop transmission, even though they were telling everyone in the country, on every news station that it stops transmission, admitting now, yeah, we were lying. You got us. What are you going to do about it?

[00:23:59] Jefferey Jaxen

Exactly. So here we are. Government science communicators have a big problem on their hands because they just live through this. And they were wrong on almost every front. And they mandated a lot of this on almost every front. So what are they going to do? Are they just going to go back to normal? Well, let's hear from WEF agenda contributor Maria Leptin. Who is Maria Leptin? She's the president of the European Research Council. This was set up by the entire European Union to be the premier European funding organization for research. So kind of a big deal. When she talks, listen to what she has to say about the future of science communication.

[00:24:36] Dr. Maria Leptin, President of the European Research Council

Two of the countries which were most successful in getting good coverage of vaccination. Base this not at all on getting their citizens to try and understand the signs. One is Bhutan, which where they were very successful in preparing a campaign and involved they asked they they were sensitive to the country's needs, to the citizens needs involved in informing the religious establishment and in fact, using them in finding the right time and date. And they got fantastic coverage. No signs was explained. The other example I know of is Portugal, where the campaign was handed to a retired Army general, and the army general just treated the country as his troops, and he rallied the troops. He declared it as a war that the country in patriotic passion was going to fight together. And they had up there I think they were leading in Europe, if not the world. So no science.

[00:25:38] Del Bigtree

That is really amazing. Reminds me of that saying, never let a fact get in the way of a good story. Never let science get in the way of a propaganda machine in an attempt to forcibly vaccinate everyone in the world. She's at the World Economic Forum, obviously. Probably got a standing ovation there by all of those that are trying to sell, you know, our sovereignty away. What an amazing statement though, right? Stop talking to people like they're intelligent. Treat them like they're idiots. Go into their churches and just tell them God wants them to do this or that. They're at a war with nature and they need to do their part. So there you have it, folks. There's the game plan. Next time this comes around, less and less science is their answer. And guess who will not be following that decree? Where you will always find the science here on the Highwire.

[00:26:26] Jefferey Jaxen

And you know no one in the crowd. Question from the crowd. Yeah. So Portugal, they use military force to ram it, ram it home to their citizens to get the shots. They did really well. How did Portugal do overall when they were doing that? Well, let's look at the headlines. September 2021. After that successful campaign, "Portugal has nearly run out of people to vaccinate. What comes next?" Well, two months later, this comes. This comes next. Here's the headline December 2021 "Portugal imposes post-Christmas Covid 19 curbs as Omicron cases surge" and then going into the summer. Here's another Portugal headline "Omicron Sub-variant drives spike in cases and deaths in Portugal" pretty much ended up just like everyone else, except they had a really high spike there, but no change. So I'm sorry, I guess no science, but let's talk about this. Let's overall picture here. So clearly these health organizations and governments failed miserably to the point where they've been voted out, they've been kicked out of office. And so you have the W.H.O. come in. We reported on this. A lot of people are really raising the alarm about this, the W.H.O. pandemic treaty. They're saying, look, forget about what just happened. This was a really disaster. We need full control over the entire world and all the countries so we can have a one health approach in there. We're going to wrap in mandatory vaccination purchases and mandatory. Everyone's going to have the same thing. We're actually going to do some climate stuff in there as well. And if you don't remember what this sounds like, listen to Tedros. He's the director general of the W.H.O.. Listen to his plea recently about this.

[00:27:54] Tedros Adhanom Ghebreyesus, Director General, World Health Organization

Last month, the UN General Assembly adopted a political declaration on pandemic prevention, preparedness and response, underscoring their commitment to meet shared threats with a shared response. The Covid 19 pandemic upended lives and livelihoods, disrupting societies and economies, and exposed and exacerbated political fault lines within and between nations. It eroded trust between people, governments and institutions, fueled by a torrent of mis and disinformation. And it laid bare the searing inequalities of our world, with the poorest and most vulnerable communities the hardest hit. The next pandemic is not a question of if, but of when, and we cannot afford to repeat the same mistake of the past. That's why W.H.O. member states are negotiating a new pandemic accord and amendments to the International Health Regulations to strengthen the legal framework for the global response to pandemics. And we can't stop there. We must follow through with national ratification and accountable implementation for the sake of future generations. We must not go back to the old cycle of panic and neglect that left our world vulnerable. We are stronger together.

[00:29:32] Del Bigtree

It is so unbelievable. You could really just diagnose every word. He starts out by saying that pandemic destroyed lives, destroyed jobs, destroyed economies. Then goes on to say, and people were upset about that because of misinformation. I think they were upset because you were mandating the destruction of our lives with absolutely zero science. And the less science you talked about, the better you were at it. And then he says, we've got to overcome and we can't make the mistake again. What mistake? What mistake? You want to be able to lock us down harder, destroy more of our economy, destroy more lives, and separate more of us. And when you talk about, like that article from the New York Times, like learning loss. It appears the learning loss is the W.H.O. and the government of the United States of America that apparently think the problem is not that the masks didn't work and was causing more Covid, and not that you're more depressed since you weren't able to end up walking around freely, or that your kids got a terrible education. We need to be do it even twice as hard and make sure every nation is in on it. And the biggest pile of baloney is the poorest nations actually did better. Africa did so much better than us. Haiti did better than the United States of America. Why? Because they just couldn't seem to get the vaccine to enough people. It's really amazing that we're sitting here in this position right now.

[00:30:51] Jefferey Jaxen

That one minute clip is a masterclass on gaslighting in the inversion of reality. Here's Tedros speaking to you like you didn't just live through the last three years and experience experience what you experienced. Okay, so what's happening right now is the W.H.O. is forcing this track of like getting everybody in. We're going to really do this right this time. And at the same time across the world, there's there's a populist movement. And so the media is calling them populist leaders. They're being elected everywhere. But it's just basically leaders who are focusing more on national sovereignty after what just happened. They want people. They want policies that are in their nation's best interests. We saw it in El Salvador. We're seeing it now in Argentina, over in the European Union, the Netherlands, Slovakia, just just named as prime minister as well. And this was the headline here. The "Slovakia's new government, led by populist Robert Fico, wins a mandatory confidence vote." Well, one of the first things he did was took to the podium and he gave this speech right here. So you can read along with the subtitles.

[00:31:50] Richard Fico, Slovakia's Prime Minister

If someone had a different opinion on vaccination against covid, they were dangerous for society. The media wrote openly, you know, I'm quoting now: "that the unvaccinated should squeal in pain like a pig." In addition, you have to use force if someone rejects the "policy of the needle." And today it turns out that our free perspective on past vaccination and the government's measures to fight against covid, grossly violating human rights, was correct and justified. One study after another ones, they confirm the scandalous consequences of massive vaccination with untested experimental vaccines. Yes, I confirm, as the chairman of the party, (SMER) and I also confirm it as the prime minister, that I will support the efforts of some politicians from the new government coalition to politically assess, what was the government between 2020 to 2021 fooling around and also have a look at the financial side of extensive, often meaningless purchases of medical devices and vaccines. I also declare very clearly that SMER- slovenska socialna demokracia (political party) will not support strengthening the powers of the World Health Organization at the expense of sovereign states in managing the fight against pandemics. I will say, that such nonsense could only be invented by greedy pharmaceutical companies, which began to perceive the opposition of some governments against mandatory vaccination. According to the Constitution of the Slovak Republic, the validity of such international agreements in favor of the World Health Organization requires the consent of the National Council of the Slovak Republic. And I do not believe the sovereign Slovak political parties will express such approval. The SMER party and it's MPs certainly won't.

[00:33:47] Del Bigtree

I just want to take a moment because we keep showing more and more politicians stepping up and really demanding answers, whether it's Australia or in the European Union. But this isn't just some, congressman or a senator or an MP. This is now the elected prime minister. And using that pulpit to make what was obviously a plea that he must have made to the population of Slovakia. And so what this now tells us is that the majority in that country support a man that is calling this a ruse and a joke and an embarrassment and experimental vaccines. We are really turning a corner, and I think all of us are dreaming to live in a country where that might happen. And here in the United States of America, can you imagine if the next newly elected president gets up and that's what they decide to talk about? And I think there's a real chance of it. And I've said it before, you've got Ron DeSantis in the mix who clearly came out against the Covid vaccine very strongly. You've got Donald Trump, who once said he was against vaccines, even though he warp speed at this one and seems to be standing by it, but who knows where he lands. He's also says he believes in medical freedom. Robert Kennedy Jr is now surging in the polls. Everywhere you look clearly makes very strong statements. Has been, part of a nonprofit, a lot like the work that we do here and all of them running against a man who appears to be only kept alive by pharmaceutical drugs. God knows how he's still walking and talking. So, it's really an amazing moment that we're sitting here when just a few years ago, no one could even talk about this topic.

[00:35:22] Jefferey Jaxen

Right. And so you saw their prime minister, Fico said he's going to support the efforts to investigate what he calls often meaningless purchase of vaccines, the Covid vaccine. But more importantly, talking about the WHO, he said he will not support strengthening the powers of the W.H.O. at the expense of the sovereign states. So those are big, big words. But Estonia, another European Union member state, went a step further and they just sent a letter to Dr. Tedros. And this is what that letter said. Just I'm going to go through this first paragraph. It says here "by the Republic of Estonia, on the basis of article 22 of the Constitution of the World Health Organization, declares that it rejects and does not consent to the International Agreement on Pandemic Prevention, Preparedness and Response, as well as the complementary amendments to the International Health Regulations 2005 and improving the sustainability of financing of W.H.O.." So they're out. They're done. So this is another pushback. We're seeing this in Canada. They have petitions in their government. We're seeing it in the UK. The United States has a bill in Congress to protect the US sovereignty against this World Health Organization treaty. New Zealand similar situation. So the New Zealand government, a coalition government, has now formed Jacinda Ardern China, lockdown zero, Covid 2.0 is out. And this is what the headline looks like. "New Zealand's new government promises tax cuts, more police and less bureaucracy." But it also looks like this "New Zealand government to end all Covid 19 vaccine mandates."

[00:36:46] Jefferey Jaxen

So they're going hard. Now most of those were already on their way out. But now this is kind of the nail in the coffin. They're done. So let's look at this agreement though. There's a coalition agreement between the National Party and the New Zealand First Party. And in there it reads this "ensure as a matter of urgency in establishment and completion, a full scale, wide ranging, independent inquiry conducted publicly with local and international experts into how the Covid pandemic was handled in New Zealand." I wonder what they're going to find, "including covering use of multiple lockdowns, vaccine procurement and efficacy, the social and economic impacts of both regional and national levels, and whether the decisions made and steps taken were justified." But then it goes into this "ensure a national interest test is undertaken before New Zealand accepts any agreements from the UN and its agencies that limit national decision making and reaffirm, reconfirm that New Zealand's domestic law holds primacy over any international agreements. As part of the above, by the 1st of December 2023, reverse against reserve against proposed amendments to the W.H.O. health regulations to allow the incoming government to consider these against a national interest test." So, quite simply, they're saying, well, you can you can propose anything you want, but we're going to look at this in our national interest is it's up to us. Is it going to benefit us or at least help us in any way? If not, we're not doing it. So this is what countries.

[00:38:11] Del Bigtree

The people have spoken. Everyone just take a moment to just breathe this in. In a world where we have been so worried that we have no power whatsoever anymore, people are rising up electing new officials. You want to talk about an about face the most locked down, aggressive, campaign against this so-called virus in New Zealand is now gone an about face. Is not only not forcing the vaccine any longer, but is putting it under an incredible investigation, which we know what they're going to find. It's what they're starting to find in Australia and all across this. Country. I love seeing Estonia. All of those names written. Of all the people that are signing on to this, and you know that they got elected by a mass of people that are just saying, oh hell no. Across the world, I just want to take this moment because I go around and I know a lot of you out there watching this show are self proclaimed conspiracy theorists. It's okay. That's awesome. You can do whatever you want. I don't consider myself one. I'm a science theorist and we sort of stay there. But here's the point. A lot of you come up to me with, like the Debbie Downer attitude, like we're just playing into their hand.

[00:39:20] Del Bigtree

This was just a test. They knew that Covid and all of this is exactly where they want it to be. Really, really? They really wanted the entire world turning against the vaccine program. They wanted leaders of nations across the world saying, we're never going to do this again. We're not going to take this vaccine. We're putting the entire pharmaceutical industry under investigation. Oh, and by the way, that entire like, you're all going to rule us from some, like higher power, the W.H.O. and Tedros is trying to get himself elected there. No. Go ahead and just ram that where the sun doesn't shine. That's exactly what the pharmaceutical industry was trying to prove. That's what they were trying to do. They got us exactly where they want us. Give me a break and take a moment to celebrate when mankind actually wins. Stop walking around as a Debbie Downer. In fact, start saying, oh my God, we can do this. This is our time, I need you, I need you to stop whining. Look at what's happening around the world. We're never going to let this happen again. And our children are counting on us believing that.

[00:40:25] Jefferey Jaxen

And it's also forced the pharmaceutical companies and those within the government that are lobbied by them to come out and show their true colors. And we see them now. So this is this is kind of the pushback now. So you have this populist movements all over the place that are concerned about what's happening in their country and not the world, and not trying to lock down the entire world or get everyone to buy vaccines. These vaccine companies, though, are pushing back. So one of them is Pfizer. So remember, the European Union was basically sold. They they negotiated a contract with Pfizer for all the member states. How was that done? It was done by the EU Commissioner, Ursula von der Leyen. And what she did, she didn't sit down with Albert Bourla of Pfizer, the CEO. She did it over text messages, just some text messages. And when asked what were in those text text messages, this is what Reuters said. "EU's von der Leyen can't find text with Pfizer chief on vaccine deal." Oops, can't find them. Sorry, but the vaccine deal is going through anyway. Well, Poland said we're done. I don't think no one wants these vaccines anymore. Covid's over and we didn't really fully agree to this, so we went out of it. Well, this is what Pfizer is doing now. This is a political headline. "Pfizer is suing Poland over vaccines." And this is kind of a breakdown that says this is how we got here. But when you look into this article, it says this. "In April 2022, then Polish Health Minister Adam Niedzielski announced the country had stopped taking vaccine deliveries. However, it didn't take long for a group of nine other countries, all in eastern and Central Europe, to follow Poland's lead."

[00:41:59] Jefferey Jaxen

Well, they didn't go so far as halting deliveries. "They did complain that they had been trapped into spending money on doses they didn't need at a time of economic turbulence. Indeed, at one point, capitals even began asking for greater transparency on the original negotiations between Pfizer and the commission. What was promised we would really like to know, said Belgium Ambassador Pierre Carnavals in December 2022." So think about that. Your country is signed on to a vaccine deal with Pfizer, and they're saying, can we at least see what the deal is, because we don't need these anymore, and we're going to probably back out on this and saying, I can't find the text messages, can't find the deal, just, you know, go ahead. Pfizer is going to sue you, though, if you back out of this. Well, here's another here's another kind of page to this. So this is an investigative piece by an American journalist, Lee Fang. And Jack Poulson. This is called "Moderna is Spying on You." New documents reveal its attempts to control the vaccine debate. Listen to this. So it says in here, quote. "Djokovic crowned anti-vaccine hero after US open win, howled the title of an internal report. It continued the optics of Djokovic, whose vaccine opposition barred him from competing in the 2022 US open, returning to and winning the Moderna sponsored competition, bolsters anti-vaccine claims that vaccines and mandates are unnecessary. The report rated news surrounding Djokovic as high risk, noting that vaccine opponents are celebrating the tennis champion and that some on social media mockingly point out that Moderna is a US open sponsor." Well, mockingly point out who's mocking them? Oh yeah, it was us. Check this out.

[00:43:43] Del Bigtree

Try to contemplate what are the odds that the one human being on the earth in all of sports, and maybe got more attention than anybody during a mandated vaccine program, stood his ground, took headlines worldwide. And his name is Novak's. Well, it's Novak, but seriously, pretty damn close. Really strange as someone in their programing, this whole thing going, come on, people, wake up. But to add irony to the whole thing at the US open, of course they're sponsors and they have the shot of the day. Well, he didn't just have the shot of the day, the shot of the match. He had the shot of the tournament and the shot of the year. And this is who was sponsoring that shot.

[00:44:27] Male Speaker

Well, we'll take you to the dirtiest shot of the day. And it was here's the final one. Relief and release there. So the shot of the day. Brought to you by Moderna.

[00:44:48] Del Bigtree

The shot of the day brought to you by the guy that beat everybody else that got that stupid vaccine. Well done Novak, we're really proud of you. Seriously a hero in this world today. That is, that is just never going to get old. I try to imagine how much money they spent for that ad placement spot for shot of the day, only to go to the guy that defied them the whole way. Really, truly a hero, I hope. I hope someday, maybe when he's done playing tennis, we're able to get him onto this show and talk about it. Just amazing.

[00:45:22] Jefferey Jaxen

Oh, regardless, it's fun to know that Moderna's public relations department is wringing their fists at our show when they're watching us every week, I'm sure. So let's go into this because this is actually like a big tobacco moment for the vaccine industry, because we've heard about their PR firms, their departments. But this kind of really pulls back the curtain. So let's go back to this article. It says "behind the Scenes. The marketing arm of the company," this is Moderna, "has been working with former law enforcement officials and public health officials to monitor and influence vaccine policy. Key to this is the drug industry funded NGO called Public Good Projects, according to documents we have seen PCP works closely with social media platforms, government agencies and news websites to confront the root cause of vaccine hesitancy by rapidly identifying and shutting down misinformation. A network of 45,000 health care professionals are given talking points and advice on how to respond when vaccine misinformation goes mainstream, according to an email from Moderna. As the pandemic abates, Moderna is, if anything, ratcheting up its surveillance operation with a keen interest in anything relating to policies designed to coerce vaccination. In particular, the company is closely tracking elected officials and recently passed laws in Arkansas and Texas which restricted vaccine mandates. It says, quote, politicians attempting to ban Covid 19 mandates or at least claiming to signals growing resistance to Covid 19 mitigations, reads one of Moderna's alerts, given the company avoided publicly commenting on the mandate debate." This is revelatory. And remember, they talk about bills in Texas we just had last week, Jackie Schlegel from Texans for Medical Freedom, who is an integral part in helping pass Texas's SB seven, which bans private businesses from mandating the Covid shot like Moderna's, on their employees and contractors to the tune of a \$50,000 fine if they break that. So it Moderna is very is very interested in that bill and other bills like that.

[00:47:15] Del Bigtree

So can I just take this moment to say that Moderna's little like private police force here is failing at their job? It's really scary, but man, do they suck at what they do.

[00:47:29] Jefferey Jaxen

All that money, all that effort to control and they still can't do it. I'm sorry. So we're learning about the reach. So people think it's just some, some a group of people sitting around a table with, marketing minds thinking, how are we going to do an ad for our vaccine, our product here? No, they're proactively, aggressively reaching out into the public, into the community, putting their hand over people's mouths, censoring debate. And so it gets interesting here. So we have the public goods project. Let's go to the the PG website. The about page. It says the "Public Good Projects is a public health nonprofit specializing in large scale media monitoring programs." Creepy. "Social and behavior change interventions." Even creepier. That's psychological operations, if you will, "and cross sector initiatives." So one of those initiatives is this it's called the Stronger campaign. This is on their website. And the stronger campaign is they worked with. Well, actually, let's just go to Lee Fang's Twitter page because he uncovered this. And this is actually we'll stop right there for a second. So we have the Public goods project, and one of the articles Lee Fang wrote for The Intercept, this was titled "Drug Lobby Asks Biden to punish Foreign countries pushing for low cost vaccines."

[00:48:44] Jefferey Jaxen

Corporation doesn't want low cost vaccines. But in there, it talks about two of the largest drug lobby groups in the world. Bio and pharma are the acronyms. "Bio and pharma represent the largest drug firms in the world, including Pfizer, Gilead Sciences, and Johnson and Johnson. The two groups collectively spent more than \$38 million lobbying federal officials last year, and member companies maintain extensive ties to promote think tanks, lawmakers and academics active in shaping the policy response to the pandemic." So we go to Lee Fang's Twitter page and he talks about this. We have bio, this juggernaut of lobbying, he said in a separate push. "Pfizer Moderna is lobbying group bio fully funded, a special content moderation campaign designed by a contractor called Public Goods Projects, which worked with Twitter to set content moderation rules around Covid misinformation." So they're Moderna is essentially working, using these sockpuppets to work with Twitter, to set content moderation, to set it at the global level, not just, hey, could you take down this person? Could you take down this person to set it from the start of for vaccine misinformation? Think about that around your product.

[00:49:48] Del Bigtree

And calling it an NGO like and it's called the public good. Like literally monitoring you, brainwashing you for the public good funded by pharma but tax deductible because. Because it's an NGO. It's there's a huge, we used to call this propaganda. You used to call this the advertising arm of the pharmaceutical industry. Now they call it an NGO that's out for the public good. It's really unbelievable, sinister.

[00:50:14] Jefferey Jaxen

But it's a nonprofit, so I'm sure it's okay. So let's go back to these Twitter. So bio. It says "bio provided \$1.275 million to the campaign, part of which is revealed through tax forms. The campaign, called stronger, helped Twitter create content moderation bots, select which public health accounts got verified, helped crowdsource content takedowns." Boy, it sounds a lot like what just happened to the Highwire page, but you can see here you can actually look at the tax document. If you don't believe me, look at the tax document. So there's there's bio. There's the Biotechnology Innovation Organization at the bottom there. And you can see the public goods projects. Mount Vernon Alexandria Virginia. That's right. They're consulting. So there there's the money that's being spent on there. But what's interesting is this stronger campaign ended in 2022. From what it looks like, it ended right around the same time that Missouri versus Biden, that that court case started, which is the attorneys generals that were forcing the government not to be able to talk to Big Tech anymore to do this content moderation.

[00:51:21] Del Bigtree

It's really outrageous. And it shows you what what a precarious situation we find ourselves here in the United States of America, that we have a government that is basically Moderna, by the way, holds co patents with our own NIH, which we have always thought was a conflict of interest. When Moderna makes money, so do government agents. That is crazy, especially when they're the ones doing the same safety testing of this product and promoting it to everyone in America only to make money themselves. Do you really think they're doing a proper safety test? If it's of a product they're going to make money off of? This is the type of, this really is the swamp. And when you think about the greatest attack on American sovereignty and freedom and liberty, it was this Covid pandemic. The lockdowns, both Donald Trump I fault and President Biden have were a part of locking us down, destroying our economies. So it crosses, it shows you it crosses political lines, this type of incestuous, disgusting relationship that corporations now have with our government and allowing them to call it an NGO when all it's really doing is surveilling us and trying to brainwash us through their control of television. Amazing reporting Jefferey so much. So much to be excited about though, because, we can get dark about it, but really we're winning. Humanity is winning. Humanity is overpowering. They're recognizing that we're taking this castle. There's more of us. Science does matter to us. You're not going to convince us that it's like some religion. So I'm just really. I as as dark as it may seem. I am just so giddy right now over this report. Great stuff Jefferey.

[00:53:01] Jefferey Jaxen

Likewise alright.

[00:53:02] Del Bigtree

Alright. Very good. I'll see you next week. Alright. Well, okay, I want to I want to show you something. Because two weeks ago, right before Thanksgiving, we told you that we had had some amazing, should you say it, donors that decided that they were going to create a matching fund, a \$1 million match for the work that we do here at the High Wire and for our nonprofit, the Informed Consent Action Network. So for those of you that have been donating over the last two weeks using our site to be a part of the Million Dollar match, you're probably wondering, where are we at? Well, here it is, folks. \$110,000. Thank you to everybody that took advantage of this. So far we have until the end of the year, so we still have several weeks to use this entire incredible matching fund of \$1 million. But this is a great start. We're so excited. And remember that \$110,000 is actually \$220,000. That is going into the work that we're doing with the Informed Consent Action Network. For those of you that maybe are watching for the first time or just started watching recently and are trying to understand what is it that ICAN does well, one of the things it does is produces this show, which I think is partly responsible for all of this waking up that's happening across the world. We're an international show. We have been more explicit and more science based than anyone else that I know. Delivering truth. And by the way, I think we're doing so well just because truth just sounds better, no matter what they try to figure out why are we so successful? But we do this show.

[00:54:39] Del Bigtree

But we also produce The Informant, which is a newsletter magazine that's going out. We bring in all sorts of guests. We do science investigations, we fund studies, and maybe most importantly, almost half of the funding that comes in goes to the legal work that we do. This has always been an experiment for us. What happens if the news wasn't just reported? But when you see the problems in the world, what if you use the power of media and then the power of the courtrooms to fix that problem? That's what we've been doing with ICAN. I think we're unique in the world for that work, and we are so proud of all the things that our legal team, through Aaron Siri, who is at the top of the show, what they've achieved and bringing back the religious exemption to Mississippi. We are going to continue to free the five, the rest of the five states that still find themselves with no religious exemption under a full vaccine mandate that forces their children to be vaccinated in order to go to school, a complete violation of the Nuremberg Code. But even beyond those state issues, we also help individuals. We go out. Sometimes we fight cases for them, and in many cases it's in different areas, whether it's the medical industry, sometimes we represent people that even work for Pfizer. But in one case, or in actually several cases, we represented the military. Like this story?

[00:56:17] Robert Schelske, Member of the United States Army

I'm a staff sergeant in the United States Army. I found that just after the first couple of years of being in the Army, I absolutely loved it. And I decided that I wanted to make a career out of it. I grew up in the church. I've been attending church three days a week for the majority of my life. My faith is everything to me. It is the foundation of which I've built my entire life. When we heard that there was a vaccine that was going to be available, I think there was a lot of excitement, a lot of hope. But as we got to learn more about the vaccine, I learned that I might have some convictions there that would maybe prevent me from taking that vaccine. It became a little more nerve wracking as we heard that they were going to make it mandatory. I believe that abortion is murder, and I believe that to support that in any way, shape or form is wrong for me. And all the vaccines that have been available in some way, shape or form, either in the testing or in the production has used aborted fetal tissue. And I don't think that I should take part in something beneficial from that. I applied for the religious accommodation request, I wrote a memorandum for record. I got letters from my pastors that just stated they're legitimately held religious beliefs. I packaged all that up, and I sent that off through the chain of command all the way up, and my initial request was denied.

[00:57:32] Robert Schelske, Member of the United States Army

I was genuinely sad because it started to become real, that I might not be able to continue to serve in the Army. Prayed a lot about it, and I came to the decision that there is no way that I'm going to take this shot. My convictions are what they are, and I have four children that are watching me, and I need them to see that their dad will stick to his convictions and won't bend on it. When they notified me that I was going to get separated, it would have reflected that we were being separated for serious misconduct, and that was a hard pill to swallow. I've given a lot of my heart and my soul, and my efforts to the army made me feel like I was doing something wrong, when in my heart, I knew that I was doing what was right. I do truly believe that God sent Aaron Siri and his team to come and help us. We were able to take the stand in federal court and give our side of the story and ask the judge to help us, and we were represented so well by Siri and Glimstad. They were incredible. I tell people it went movie well. It was so good. They were just professional. I can't even describe it other than they were the varsity team. And it showed.

[00:58:38] Aaron Siri, Head Legal Counsel, ICAN

The members of our military swore an oath to lay down their lives to defend the United States Constitution. And the very first freedom under the Constitution was the freedom of religion. It appears that our executive branch, the military, has forgotten the importance of that. But luckily our judicial branch has not.

[00:58:55] Robert Schelske, Member of the United States Army

It was unbelievable to get the career back. The weight of the world was lifted off of my shoulders and I breathe fresh air for the first time and so long. To ICAN thank you for everything that you've done. It was like having a hero swoop in with a cape. Because of what ICAN did for me, I'm still able to continue with my job. I'm still able to continue to serve our country and I'm so thankful for that.

[00:59:29] Del Bigtree

It's just another beautiful story in our ICAN Impact series, but I want to say this when he says thank you, ICAN. He's talking to you. Every one of you that donates to make this work happen here, is what allowed us to fund and fight for those that fight for us, and for our freedom and our sovereignty. This was an amazing moment. If you can imagine, a military professionalism is not exactly funded well enough to fight their own government or Moderna and the tracking systems or Pfizer or all that's going on. But you make it possible for us to step up for soldiers and for medical professionals and people across this country, those that maybe even have been injured or were about to be let go from their jobs. And so for all of you out there that are wondering what is it that we do, I think that this is one of the greatest Christmas gifts you can give anyone you know, or even to your own family, is the ability to say, I changed lives. I made a difference. I kept someone in the military so that they can defend my nation simply because they believed in God and wanted to stand up for their religious conviction. You have all made that possible that have donated so far, and if you want to be a part of these stories and the impact that we're having around the world, all you have to do is give \$1, and that \$1 will be \$2 this week, and \$5 will be ten, 100 will be 200, and a thousand will be 2000.

[01:01:00] Del Bigtree

As we work to take advantage of this incredible gift that we've been given by some of our larger donors, I want to thank everyone that's taking part in this. I want to thank everybody in this holiday season that is taking the time to think beyond themselves about what impact we're having in the world, what future we want for our children. That's what we are dedicated to here. I'm so proud to be a part of it. I'm so proud to be a vessel for all of you. Truly our Informed Consent Action Network. You are our network and we're happy to be part of it. Here you can go to [ICANdecide.org/match](https://icandecide.org/match). It's right on the website. Go ahead. Go up there, choose the amount you want and make it. If you want to make it a monthly recurring donor donation, that would be awesome, but this is the moment to donate. If you haven't done it before, it's twice as powerful as it would normally be. So thank you all for taking part of this opportunity. Alright, we speak truth to power. That's part of what we do here on The HighWire.

[01:02:03] Del Bigtree

We have an amazing team and we go beyond that. We step into courtrooms. But sometimes I ask myself, what would it like to be on the other side? And it's a conversation, by the way I have all the time. There's a lot that we watch in our language. There's a lot that we think about. Can we say that or are we accurate? Part of why we make sure we are so accurate and keep it tight as a drum here on the Highwire is simply because I don't want to end up in the court system right now. I don't want to be, finding myself sued by the government of the United States or Pfizer or some one of these entities saying that somehow, I've committed fraud or lied about something. So we make sure we're airtight. That's the only defense we have. Doesn't mean it will never happen. It's something we talk about. I'm glad we have a great legal team, but can you imagine if just by speaking the truth, by sticking to the science like we do here, suddenly you got a call that you were being sued for \$500 billion? Just take that in for a moment. Imagine yourself. Just like little sense memory here. What does that phone call feel like? That's what happened to Dr. Eric Nepute. Take a look at this.

[01:03:16] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

I'm a physician based in Saint Louis, Missouri. I've been in practice now 20 years, so I've got a unique background. I'm a primary care physician. I'm a doctor of chiropractic, doctor of natural medicine. I have a fellowship in functional neurology. Prior to Covid, our practices were extremely busy. I'd go to conferences presenting on how we do our wellness integrated model. You know, we were getting ready to open up another 30 practices across the country. Then Covid hit and everything changed.

[01:03:44] Donald Trump, 45th President of the United States of America

We'll be suspending all travel from Europe to the United States.

[01:03:48] Female News Correspondent

The US death toll from the virus has surpassed 100 people.

[01:03:51] Male News Correspondent

20,000. More than 46,000.

[01:03:54] Male News Correspondent

Stay at home.

[01:03:55] Female News Correspondent

Stay home.

[01:03:56] Male Speaker

Quite simply, stay at home.

[01:03:58] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

That first week that that happened, it was like the zombie apocalypse came to Saint Louis. And I remember driving to work in the morning and being one of the only cars on the highway. And then we started seeing people really getting sick. We would have patients and physicians both calling us. That they were scared. There were no solutions. Doctors didn't know what to do, patients didn't know where to turn. So we gave our solutions, our 150 year old homeopathic remedies for flus and colds that we've been dealing with our patients for over 20 years. Things like vitamin C, IVs, things like ivermectin and hydroxychloroquine, and high dose vitamin D and high dose zinc. And it was working, and we were talking about our protocols to doctors that were in hospitals across the globe. And I was actually part of a large group of doctors that would meet on zoom twice a week. And it was the Global Doctors Alliance. And, I mean, there were PhD microbiologist virologist Dr. Zev Zelenko was on the calls with us. We were sharing solutions with each other, which is what we as physicians thought we were supposed to do. And after about 3 or 4 weeks of being on these these calls with doctors, everything shifted. It shifted from us talking about how are we going to help our patients to, hey, the government's coming after us. This is what was happening in Europe. Hey, we're getting shut down. Hey, they're telling us to stop therapeutics and treatments. And we thought, oh my gosh, well, that'll never happen in the United States.

[01:05:26] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

That'll never happen in America. And then a couple of months later, it did. So in May of 2020, myself and several hundred other doctors across the country got a letter from the Federal Trade Commission. And the letter said, do not tell patients that vitamin C, IVs, or that any other therapeutics that are not recognized by the federal government could be beneficial for patients that have Covid 19 and etcetera. I thought that was an odd letter. We called the Federal Trade Commission and we said, alright, what's this about? Would you please give us some insight on what are your concerns with what we're doing? Did we do something wrong? They said, look, just be careful and make sure that there's nothing on your website or anything that you put out there on radio or television or advertising that is, is making any claims of something that can't be substantiated. I said, no problem. Well, at that time, we already had 112 papers that supported the benefits of vitamin D for Covid, and we had 24 papers that supported zinc for Covid. In fact, one of them was a paper that was funded by Tony Fauci by NIH, done in 2010. Our attorneys said, alright, we'll just keep moving forward. And that's what we did. We would get calls from family members of patients that were in the ERS or the ICUs, and we would share with you doctors therapeutics that have been working. But then all of a sudden, hospitals were no longer allowed to speak to anybody outside of their facilities.

[01:06:51] Female News Correspondent

Breaking news tonight, the FDA approving the first and only treatment for coronavirus in the US, remdesivir, now available in hospitals nationwide.

[01:06:59] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

Hospitals were no longer allowed to do anything that didn't go underneath the emergency use authorization protocol. The hospitalist and doctors told us if we did any therapeutic outside of what the hospital allowed us to do, which was things like remdesivir and and ventilators and IV fluids. And that's pretty much about it, that they would get fired. We were working as hard as we can, talking to patients, talking to doctors, speaking in front of state and federal Senate and House committees, figuring out solutions that we can do. April of 2021 I was traveling to Tulsa, Oklahoma, getting ready to speak at a Health and Freedom rally. As I'm walking into this building, I get a phone call from my attorneys and my attorneys said, hey, Eric, we got good news and we got bad news. I said, well, what's the good news? Well, the good news is we think you just set a Guinness Book of World record. I said, what is the record? Well, you just got sued by the government for \$508 billion for telling people to take vitamin D and zinc during Covid.

[01:08:05] Del Bigtree

You ever been at one of those dinners where you, you decided to throw your card down and you took a bunch of friends out and you feel like there's a couple of bottles of wine, maybe more than I thought. And then you get that check and you're like, what? This is a check for \$500 billion. So I'm honored to be joined right now by Eric.

[01:08:26] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

It's really good to see you.

[01:08:29] Del Bigtree

This is an unbelievable story.

[01:08:31] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

It really is.

[01:08:31] Del Bigtree

It's really outrageous. And so just just before we even get started, what is the what is the emotions in a moment like that? There has to be some fear.

[01:08:43] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

Still, I got to be honest with you. And then watching the video that you guys just put together brought those emotions back up. And, you know, sometimes when we're just going through stuff, we're just head down, going through it. You don't really look back and go, wow, that was really crazy. I mean, the emotions, first of all, I had about a 30s of the oh, craps. Yeah, that's kind of a big deal. Yeah. As I'm walking into an arena where I'm supposed to be giving a presentation. So I have to shake that off.

[01:09:13] Del Bigtree

A good pep talk.

[01:09:13] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

Right?

[01:09:14] Del Bigtree

Right.

[01:09:14] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

I had to shake that off and go in and do what I had to do. And and I'll tell you, you know, fear. Which to me, Del is false evidence appearing real. And in my world, the only way to get rid of fear is to have faith and to have facts. Well, brother, I had all the facts on my side. I knew it from day one. I've been doing radio and television for 20 years on nutrition and what you can and can't say. I know this and I back everything up with data. I had the facts. And man, I had the faith and I knew what was going to happen. And I tell you, I remember having a conversation with my wife and children that night when I came home from Tulsa. I said, look, you're going to see that on the news. This is going to be a really big to do in the news, a really big deal. We're going to get through this and we're going to be fine. I just want to make sure that you guys know that we're all going to be okay. And it was a pretty solemn, solemn moment, right? Pretty wild.

[01:10:12] Del Bigtree

So definitely that's amazing. And people do ask me, how do you have the courage to do what you do? I say the same thing. I wouldn't, it's faith and those moments where I feel afraid or weak or, I realize, oh, wait a minute. I'm thinking this is about me.

[01:10:31] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

Right. Exactly.

[01:10:32] Del Bigtree

You know what I mean? Let's just go ahead and let that go. Remember, we're just vessels here, so I know that that's, deep inside of the work that you've done. I've watched you through the years. One of the things that I want to itemize this list for me, though. How do we get to \$508 billion for prescribing vitamin C, vitamin D, a little bit of zinc, probably some hydroxychloroquine, those things. But but how does that how did that number get.

[01:11:02] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

So we asked the Department of Justice that question. How did you get to your number? Because our judge even scoffed at it. He's like, okay, this is I know we're in crazy times, but this totally took the cake, right?

[01:11:13] Del Bigtree

Right.

[01:11:14] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

And we asked them and it literally took them over three weeks to come up with an answer. You're ready to charge me for half \$1 trillion, right? But you can't tell me exactly why you're charging me for half \$1 trillion. So basically they said, well, there was 12 million 512,555,000 hits on social media. There were over 10 million through emails and shares and whatnot. And we're just going to go ahead and round it up at I think it's 37,000. No, it was 43,000 per violation. And they said, we'll just call it \$508 million. I don't know about you Del, but once it's over a couple of million, the dollars don't matter to me anymore. Right.

[01:11:55] Del Bigtree

Because what's the payment plan on that?

[01:11:57] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

Yeah.

[01:11:58] Del Bigtree

You take that out of my weekly salary.

[01:12:01] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

It's like monopoly money at that point. Like, what do you do? And what's funny is I literally over the past three years, I've had people ask me. What? And none of them can say with a straight face. Like when I when I say that number \$508 million. They can't say with a straight face. And then they look at me and they go what did you do. And then when I told him hey I recommended vitamin D and zinc during Covid, they're like, what? Yeah, it just doesn't make any sense.

[01:12:30] Del Bigtree

It really doesn't. And honestly, when you say, like, look at the science, even the head scientists know the number one guy that put us in the middle of this, Anthony Fauci, I think we have a headline. What did he recommend outside of the vaccine? Fauci says that he takes vitamin D and C supplements and that they can lessen your susceptibility to infection. And we even found a video of him talking about this. So let's go ahead and put this on the evidence playing field. Take a look at this.

[01:12:57] Jennifer Garner, Actress

Should moms be doing something just to boost our kids immune system. You know do you need more vitamin C? Do they need more spinach? Is there anything we should be doing? Elderberry.

[01:13:08] Anthony Fauci, Director, NAID

There are two vitamins that that you should consider. For example, if you are deficient in vitamin D that does have an impact on your susceptibility to infection. So I would not mind recommending and I do it myself taking vitamin D supplements. The other vitamin that people take is vitamin C because it's a good antioxidant. So if people want to take a gram or two at the most a vitamin C, that would be fine. So vitamin C and vitamin D okay.

[01:13:42] Del Bigtree

It's really amazing too, when they talk about products like they were saying to you, just don't promote products that don't have any scientific evidence. And when you look at remdesivir, the evidence around that, it is an absolute it's a total fraud. They literally moved the end points and Fauci. They just kept manipulating mid study, trying to get some result that looked like it was positive whatsoever. It had killed people in trials, they didn't stop even attempting to use it as an Ebola drug. The whole thing. And that's what they were saying. You use that, you're okay.

[01:14:19] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

You know, Del, I had 13 practices at the time, another 32 that we were affiliated with two surgical centers and consulting with doctors all over the country, all over the globe. We saw over 11,000 Covid patients. We didn't lose anybody.

[01:14:33] Del Bigtree

Really?

[01:14:33] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

Why didn't the government call us and say, hey, what are you doing?

[01:14:36] Del Bigtree

Right.

[01:14:37] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

What are you all doing? What's what's what's that you've got going on that we don't because our failure rate is massive. You know, and when I showed, I showed the Department of Justice, the DoD's very own guideline for Covid 19. I think it's page 34 or 36, paragraph four. It says, make sure that the patient has adequate levels of vitamin D, zinc and C. I mean, these are common sense things that we know are important to deal with coronaviruses. But when doctors like myself and I know this is this is a problem that a lot of people had, was why are more doctors not standing up Del? Why are my doctor not standing up? Because the government plays government whack a mole. I mean, the things that they did to me and my family are reprehensible. Like, you can't even you truly can't even fathom what they really, truly did. This is like mafioso to the 90th power. What they did.

[01:15:31] Del Bigtree

It really is. It is literally we have a we don't have a government, we have a mob boss. We have we, we are under a threat. We're being coerced. We're being blackmailed, all of it. And let's look at one of my favorite studies that came out that we reported was vitamin D. It ended up being miraculous. In fact, it's changed the way that I look at health. We now see it as a building block of the immune system. Look at this study, everybody. "Covid 19 mortality risk correlates inversely with vitamin D three status. And a mortality rate close to zero could theoretically be achieved at 50 nanograms. Results of a systematic review and meta analysis." It goes on to say, and I remember reporting on this, it was huge. Must feature shows "most research shows that blood calcidiol levels correlate strongly with SARS-CoV-2 infection severity. There is open discussion regarding whether low D3 is caused by the infection, or if deficiency negatively affects immune defense. But here's what we do know. Regression suggested a theoretical point of zero mortality at approximately 50 nanograms per milliliter," meaning if you had 50 nanograms of vitamin D existing in your blood, you cannot die from Covid, period. That's all we were saying. We can't find anyone on earth that died with that level of vitamin D, and then once you had that level of vitamin D, you were totally protected, more protected than the the vaccine that we've already showed you earlier in this show does not stop transmission, doesn't stop infection. It's outrageous.

[01:16:57] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

That study, plus the hundreds of other studies that showed the same. Geared up the Prime Minister of the UK, Boris Johnson, at the time. If you remember this, he went out publicly and said we're going to give out a million dosages of vitamin D to the most susceptible people in our society, people who have diabetes, people who are overweight, people who are old people have dark skin. Why? Because the research shows if your vitamin D levels are sufficient, you have a less chance of infection and a less chance of death. So I went to Missouri. We have a lot of political connections there. We went and spoke to the governor. We went and spoke to some of our senators. They just got done telling us that they have a surplus of Covid funds that they do not know what to do with. I presented them the data, said, this is what's going on in the UK. They said, no, we're not going to be giving vitamins out to anybody, even though the data does support it. We're not doing that.

[01:17:47] Del Bigtree

The safest damn thing you could do, even if it did nothing at all. At least it's safe.

[01:17:53] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

So we did it. So we did it ourselves. I took 6 million bucks of vitamin D and gave it to people all across the United States of America.

[01:18:00] Del Bigtree

Wow.

[01:18:01] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

You know, and it's crazy. I literally look, I'm just the son of a pig farmer from central Illinois, right? I looked at this as like, this is our Super Bowl. We all the doctors should be getting together and figuring out how how did what you see in Minnesota and you saw in Michigan and I saw in Missouri, what's working. Why are we not working together to help? And any time someone stood up, they would try to do what they did to me. It's crazy.

[01:18:26] Del Bigtree

So how long did this case last? How long was it in a courtroom?

[01:18:30] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

It was a three year case. A little over three years. I spent just over \$5 million defending myself against our federal government. And it was.

[01:18:39] Del Bigtree

5 million is a large number. That must have taken a toll. Did it?

[01:18:43] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

Del, it took everything. I had to sell. You know, I've worked my whole life. All I've ever done since I was a kid was work my whole life. My wife and I are high school sweethearts. We built our life. We built a dream life together. I mean, we had to sell cars, property. I had to sell her favorite car she had. I mean, in order for us, I mean, we're 250,000 a month, some months in legal fees to to answer paper. And this is the thing that really bothers me. The federal government tries to bankrupt you. This is what their tactic is. They know that they can't win the science. We destroy them on that. We beat them on the actual procedurals as well. They overstep some things that they shouldn't have done, and we would have won all the way through. The judge even said that when the government asked for a motion of summary judgment, the judge says, yeah, Nepute no guilt, total favor. This guy that was after \$5 million have been spent Del.

[01:19:38] Del Bigtree

Wow.

[01:19:38] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

It's insane. And that's that's the one of the concerns that I have is, you know, thank God I had the wherewithal and the gumption and the support from my my wife and my children to fight this. You know, I didn't even know I had \$5 million. I don't anymore. But but at least they got me to a point where I was able to stand up for what was right.

[01:19:58] Del Bigtree

So how does this case it ends? Does it end up settling? Is that what it's called? What was the you're in the middle of it. Judge is saying you want a summary judgment. I'll give it to you. This guy wins hands down. You have wrought a terrible case. The government's going to lose here. So what happened?

[01:20:15] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

Let me tell you what happened. So first of all, our first trial was supposed to happen in November of last year. November of 2022. We're supposed to have it. A study came out from this is huge. A huge study came out. 600,000 people were studied. It was a VA done study. John Hopkins did the date on it. They found that if doctors and scientists would have talked about the benefits of vitamin D, we could have prevented 4 million cases of Covid 19, saved the lives of 116,000 Americans in one year in 2020 alone. They want it to all of a sudden move the case. So the case got moved. So then it got pushed forward six months. Then it got pushed forward again to this summer. So two weeks before our case to the summer, we had arbitration. They forced us to sit down with multiple judges and talk through the case and try to settle. All of the judges told the Department of Justice they need to find an off ramp for this case. There's no way that they can win this case, they said flat out, no way. When the DOJ asked for a motion of summary judgment, they wrote a thousand page, thousand page letter in the best King's English to the judge. The judge read it says no liability, no guilt. We can't find anything that you're declaring that the guy's done. I mean, you're not going to win. So here's what the DOJ gave me three choices, Del. They said, look, we know we're not going to win in trial. We know we're two weeks away from trial. It's going to cost you about another 200 to \$300,000 just to go to and through trial. Once we lose, the DOJ says we're going to appeal this thing. They know that they can appeal it. Because when the judge made

[01:21:53] Del Bigtree

The government's paying for Joe Biden, no problem. This till the end of time

[01:21:55] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

for another two years, three years, he could have drug it out. They said we can also right now give you a gag order and we can work on some type of a gag order where you never talk about any of this again. You're not practicing again. You're not doing any of this stuff. You're not living your passion. Right? What I do and we can talk about some monetary reimbursement.

[01:22:14] Del Bigtree

Do they tell you what kind of numbers that might be?

[01:22:16] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

Well, they were talking about at least my legals, which was five. Yeah, which I'm not. It's not about the money to me. Or they said we'll give you option number three. And option number three is you're not going to take option number three. But here it is. Option three is you get your freedom. We'll give you a letter from the government saying you're not under investigation for anything. We'll drop the case against you. We'll give you we'll give you a letters to go back to your banks. Because I got debunked by five banks. My wife's bank accounts got frozen as well. All because of this. We'll also get you a letter to go back to the insurance companies, because as a doctor, all the insurance companies dropped my patient's ability to use their health insurance in my practices, literally cutting millions of dollars of income away from us. We'll give you that, but we'll give you no money. And so they offered me my freedom or money. And here I am today talking to you because I didn't take the money.

[01:23:08] Del Bigtree

Wow, man. That's amazing. And first of all, what a just what a stand up human in this world too, you know? So you're out \$5 million. Probably I'm sure you could have negotiated beyond that. Five to get damages, \$25 million, whatever. You don't even take that route and you just say you know what? No, I'm going to I'm going to tell the world what happened here. Just, just do what's right and wipe this off my record. And so here you are.

[01:23:42] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

Here we are, Del. I'll tell you. Well, my parents, my mother, God rest her soul, raised me that if you have the ability to do something, you have the responsibility to do it. And I truly believe that all this world is looking for are the right men and women to stand up and just say no, we just need to say no. This is all crazy, I know, and all we have to do is say no together. I believe that they want to keep us fat, sick and nearly dead. Look at what they're feeding us. Look what they're giving us. Look what they're not letting you know about what's what's right. And by the way, if we were right about vitamin D, C and zinc and everything else for Covid, what else are we right about that you should know. But all I know is that if if, if. We didn't stand. I stood, you stood. Many of us. We would never have the opportunity to have the future that we need. And we know is going to happen now.

[01:24:30] Del Bigtree

Well, and what we realize because we, we've been in this fight. I know where you're at when we face these things, but you're fighting for more than just yourself. In fact, when I was really looking at this case before, you're going to do this show, and I said you were actually fighting for the high wire, because had they gotten away with charging you \$50,000 for everybody that clicked on a video that you made, what does that end up saying to the Highwire? What does that say to every single podcaster or news agency that decides to tell the truth that doesn't fit the narrative that the government is selling, or certainly that the pharmaceutical industry that we've proven all day long here on this show today is totally in bed with Moderna and pharma and calling themselves NGOs and things. But if you don't stand up, we are in danger. We're in danger of free speech, the ability to tell the truth. And so how many? I mean, These are moments where you just these are these are historic founding father type moments and decisions, and it's just amazing to know you're out there.

[01:25:34] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

I want to tell you this, though, that the moment we said no to the settlement offer from the FTC, they were physically and verbally ticked off. Because they had just changed. And we had we didn't know this until the next day. They had not changed the FTC's guidelines for marketing and advertising. And cetera. Things you can say and can't say. They haven't changed since 1998. They just changed it. April 15th of this year, the day after we said we're not taking a settlement. And right after that, 700 companies, big name companies. I mean, we're talking some of the largest name companies that sell nutrition now. Got a letter from the FTC saying that they're violating because now they're trying to hold nutraceutical companies to the same standards of drugs to double blind, randomized, controlled placebo studies.

[01:26:22] Del Bigtree

Which they'll never do for a vaccine, by the way, won't do it for vaccine, but you're going to have to do it on vitamins if you want to put it out.

[01:26:27] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

The FTC is trying to do it. And when we said no, we were able to shine the light on that.

[01:26:32] Del Bigtree

That's great.

[01:26:33] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

It's crazy.

[01:26:33] Del Bigtree

I know in Canada, I'm getting a lot of calls right now that they're under attack. Vitamins, all those things, they're about to be illegal. This is a battle that's happening across the world. We've shown many leaders are starting to wake up to what's going on here, but this is the United States of America. We are supposed to be the beacon of liberty and freedom, the right to raise your family, to feed yourself as you see fit to, you know, go to whatever doctor or practitioner or chiropractor or massage therapist, whatever it is you get to decide. And to see this level of coercion and assault and threat, blackmail going on from this government.

[01:27:15] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

Yes. It was blackmail. Did you did you know that that so the FTC has Linda Khan is the chairwoman of the FTC and they have five chair positions underneath her. Two of those five positions resigned and wrote letters to President Biden saying that that she is using personal and political powers to go after individuals naming me talked about me in those because she's doing that. Two of them resigned. And by the way, those two that resigned said that they would be expert witnesses in our case. The government did not want this case ever to get in front of a jury, ever, because of all the discovery that we had.

[01:27:58] Del Bigtree

And all that it was done was there was to try and scare everyone else. They're going to try and Wakefield you, by the way, Wakefield is going to be on my show here, I think next week or the week after. Who pioneers all of this stood by himself. Many of us are now standing together, obviously, through all of this, even before you get the lawsuit, just watching, you were watching the McCullough's of the world being attacked. You're watching, Malone's and just everybody out there that spoke out being attacked, having their social media taken down and threats on your license was under threat as as so many brilliant doctors that have sat in that exact chair throughout this experience. Do you have a thought on what's happening? What's causing this? What is who is the they?

[01:28:45] Del Bigtree

Boy that's that's the my.

[01:28:47] Del Bigtree

Million dollar question, by the way.

[01:28:48] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

That's trillion dollar question. Well, I know that.

[01:28:52] Del Bigtree

It's literally the \$500 billion question right now. Who is they?

[01:28:55] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

Well, I know that I know that that they in my particular case and in many other doctors who sat in this chairs case, were protecting the emergency use authorization, because, remember, there's a 16 point criteria that says that if all 16 of those aren't checked off and one of them being if there was a therapeutic or or something that could help with Covid, they would lose the emergency use authorization, have to go back to the drawing board. And the golden goose was gone. I believe that was a major, major part of this. But to me, you know, I keep life real simple. I fight not against flesh and blood, but against principalities and rulers and high evil, dark places. This is a spiritual battle Del. And once I realized that, I realized greater is he that is in me than he that is in the world. So I have nothing to fear at all. I'm going to stand because Ephesians six says, after you put on the entire armor of God, and there's nothing left to do but stand, you stand therefore, and that's what we will do.

[01:29:53] Del Bigtree

Amen. I mean, and it's funny, through the years we started out, we would never get in any spiritual conversation. I just wanted to keep it about the science. But through Covid, through all of this, it really is the only way to have the strength to handle this. This battle that's upon us and it's upon us. And that's what I really want to say is that for anyone that thinks Covid is behind us, these draconian, rule makers and world dominators have not invested in the mRNA technology to just let it get pushed away. They have not invested in tracking systems and software to track you on your phone just because they weren't able to get us to buy into it this time, it's sitting there on the shelf waiting to come out. We are watching the W.H.O. trying to create this alliance where they get to on the statement of an emergency, which is simply just a virus blowing across the border, puts them in charge of the world. All this is going on right now as we speak. And unfortunately, our current leader in the United States of America seems to be a part of this cabal on, our sovereignty.

[01:31:06] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

You're right. You're right.

[01:31:07]

So so what is your message to people out there that are afraid of this, that and I said it before that have this. I'm really tired of this. They plant. They're going to they're going to outsmart us. You stood you stood. They didn't outsmart you. What is your message to people out there that watching your story right now.

[01:31:25] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

You know what, Del? It goes back to our greatest fear is not that we are inadequate. It's our greatest fear is that we are powerful beyond measure. Everyone thinks that they're just this little, insignificant thing. You're just an insignificant person who's been victimized or something bad happened to you, or you got put in a little box, or this is what you've been labeled, or this is the scar that you carry your life. No greater is he that is in me than he that is in the world. We have the ability to stand up and stand up against tyrannical evil.

[01:31:57] Del Bigtree

Yeah.

[01:31:59] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

We have it. And it's not brother. It is in our DNA to do so.

[01:32:02] Del Bigtree

I agree,

[01:32:02] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

And I just want to encourage every man, woman and child that's listening to just say no. And remember, sticks and stones will break your bones and words will never hurt me Del. We were raised different, brother. It's time to bring some of that feral raising back today.

[01:32:20] Del Bigtree

Amen. Amen. Let's let's cap it there.

[01:32:24] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

Thank you.

[01:32:24]

Brilliant. Thank you for being the hero. Thank you for standing for the truth. How do we follow you and all that you're doing? And should we get hit with another ridiculous pandemic? Be able to know what? What's working out there?

[01:32:35] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

Well, I'll tell you, we have a couple of websites. Just go to EricNepute.com. That's EricNepute.com. You can also go to fightwitheric.com and has all of our legal battles and everything that's on there. Del I will tell you that something special is on its way and I cannot wait I cannot wait and I know that we're all going to be a part of it, brother.

[01:32:55] Del Bigtree

Alright. I know we're part of that. I can feel it. It's we're all going to be called upon. This is a this I think we I've said it on the show so many times. For this we were born. We were born for this moment. Every soul on this planet right now should stop complaining and celebrate the fact that freedom is in our hands and liberty is in our hands, and the future of of the the planet and our species is going to remember us. Going to remember that we were here and we did what was right.

[01:33:23] Eric Nepute, DC, DNM, Naturopath, Chiropractor & Functional Medicine Doctor

Yeah.

[01:33:24] Del Bigtree

I love you, man. Alright. Keep up the great work. Alright, so, look, if you're out there, the holidays are coming and we've jumped on it. We've got some great new merchandise so that you can get out there and celebrate and put your game on. Put your Highwire on. I say it all the time. As you're walking through airports, so many people say, you know, when I wear my Highwire shirt, people run up and I get new friends. I know who my friends are. Like, oh my God, I watched that show too. It's a way to recognize that we're all a part of this thing together, and to find your family out there in this country and across the world. So if you want to improve your Highwire, the holidays is a good way to do it. Take a look at our new Christmas merch.

[01:34:01] Female Speaker

This holiday season elevate your gift giving game with a Highwires exclusive holiday collection. Introducing the ICAN's Talk to the hand glass ornament, a sparkling addition to your tree that captures the spirit of ICAN. And don't miss the limited edition free in 23 ornament commemorating ICAN's monumental legal wins. Securing a religious exemption from vaccination in Mississippi for the first time in over 40 years. A piece of history to cherish or show the world you're proud to be a part of the Highwire family. Deck out your ride with one of our brand new Highwire license plate frames. Whether you're keeping your loved ones cozy and cool with our Highwire blankets, beanies, hoodies, and more, wrap them in the warmth of the Highwire spirit this holiday season. It's a brave, bold holiday season at theHighwireShop.

[01:34:50] Del Bigtree

Alright, well, we've covered it. Look, there's so much great merch, but I want to tell you one of my favorite things that we have, and this was my personal request. I said, you know what I want everyone to be able to get through the Highwire because I think it's so important. And now that we know that Moderna is watching you and they got their little police force. Well, when you're having those conversations, by the way, I was literally having a conversation with my friend Paul, who's visiting today, driving in here. And you ever done this? You're talking. I looked down and I realized that the text is like recording and it's written. We had like a 15 minute conversation that popped up on the phone. Luckily, you're carefully trying not to hit send, but where's that going? What is where's Siri really sending all that information while you're talking? If it can write out a text without you paying attention, do you think someone could possibly be listening to that phone? That's why I love this right here. A little Faraday cage. I think this is one of the greatest gifts you could give. Talk about a great stocking stuffer, right? All you do is pull this thing every time you're going to have one of those conversations that you really would rather have with people, especially Christmas, Thanksgiving dinner table, couple glasses of wine.

[01:35:53] Del Bigtree

Some things are going to be said, why don't we just go ahead and wrap that up so nobody on the planet can listen to it. It's one of the great items you're going to find there the Faraday bag. We use it all the time in our family. You may want to think about it, to go to theHighwire.Shop and all of those proceeds, of course, go to the great work that we do, and free beanie, apparently a free beanie with a \$75 purchase right now. So take advantage of that. Alright. Well, a really great show, man. I'm just so psyched to see the world waking up to watch world leaders standing up. I think in our future, we're going to have a leader here in the United States of America that's going to stand up to. I just can't believe that this trajectory we're on, that anyone's happy about it. But we have our work to do. And I want to celebrate those people. Mississippi, all these great networks and people that we work with, ICAN love as a partner with all of them. But one of our favorites is, is Perk and Amy Bond. We actually teamed up with them to fight the mandatory Gardasil vaccine this year.

[01:36:56] Del Bigtree

We got together and we hired a top level lobbyist. We have changed the way we're approaching legislation on these issues. When they try to bring these laws, instead of just seeming like a bunch of angry, an angry mob out there, we're actually developing relationships and having conversations and bringing science in the conversation to the room to really shift this. And we were able to stop everyone in California from having to give their child a Gardasil vaccine in order to go to school prior to Covid. I think that was one of the most dangerous vaccines there is. But all that to say that there's a great event, we we're always talking about fundraising here, but Perk is doing some fundraising in Los Angeles. I'm going to be there speaking this Saturday, so I hope you'll join us. You're invited to the Freedom is Everything fundraiser Saturday, the second at 5 p.m., December 2nd. And all you have to do is go there to their website and sign up for that. There it is. There's the Bitly. Freedom is everything. If you can take a picture right now of that QR code, if it's on your phone or if you're watching it on a different screen, take that QR code with your phone.

[01:38:05] Del Bigtree

But if you take a picture once it's in your photo, you touch that QR code with your finger and it will take you there. If you didn't know, that's how the technology works, I hope you'll join us. Perk. There's lots of great organizations out there, but I really, really love the work they do. I like how they approach the work they do, which is why I'm going to be one of the speakers at that great event, and I'd love to see you. Tomorrow is the last day to buy tickets, apparently. So take a look at that and I'll see you in Orange County in California on Saturday. Alright. Well, what else is there to say? In some ways, Eric just sucked the oxygen out of the room. I don't know what to say other than you are a vessel. You are far more powerful than you realize. Those of us that have stood in the face of this adversity, that take on the newspaper articles and the New York Times and take on those attacks and realize that it just bounces off when people say, I just can't imagine doing that. It's like saying, you can't imagine having a good time. You can't imagine going to a party. You can't imagine sitting on a beach when you finally step into a place where you start living your life in your power, and that power being given to you by an authority much greater than any man on this earth.

[01:39:19] Del Bigtree

When you really take part in that. And I want to challenge you as you look to the new year, what type of person do you want to be? Do you want to be a powerful person? What type of parent do you want to be witness as? Do you want your children? What do you want them to see in you? Someone that cowers and bows down or takes the knee, or somebody that does it own investigation. And when they see the truth, they stand in the truth. I really want you to start testing your power. Flexing your power and seeing what it feels like. More and more, take those moments where you acquiesce and go against your own instincts. And when you catch yourself, it's going to happen. When you catch yourself saying, no, I'm stopping that right now. Stop giving in. Stop going against what you know to be the truth. Stop moving against yourself. Stand in who you are. Trust yourself. The more you do it, the better you get at it, and the better you get at it. The closer we all get to being free. I'll see you next week.
