

NAME

EP 438 8/21/25.mp4

DATE

August 23, 2025

DURATION

1h 36m 22s

15 SPEAKERS

Del Bigtree, Host, The Highwire

Jenn Sherry Parry, Executive Producer, The Highwire

Dr. Celine Gounder, CBS News Medical Contributor

Female News Correspondent

Female Speaker

Male News Correspondent

Amy Bohn, Co-Founder & President of PERK, perk-group.com

Jefferey Jaxen, Investigative Journalist, The Jaxen Report

JB Pritzker, (D) Illinois Governor

Dana Weiner, Ph.D, OFC. For Behavioral Health Transformation

Male Speaker

Larry Fink, Co-Founder, Chair & CEO of BlackRock, Interim Co-Chair of the World Economic Forum

Aaron Siri, ESQ. Lead Counsel, ICAN Legal Team

Dr. Andrea Jakinovich, Pediatrician, Optum Pediatrics

Dr. Paul Thomas, MD, Retired Pediatrician, Author, "The Vaccine Friendly Plan" and "Vax Facts" KidsFirst4ever.com

START OF TRANSCRIPT

[00:00:05] Del Bigtree, Host, The Highwire

Have you noticed that this show doesn't have any commercials? I'm not selling you diapers or vitamins or smoothies or gasoline. That's because I don't want any corporate sponsors telling me what I can investigate or what I can say. Instead, you are our sponsors. This is a production by our nonprofit, the Informed Consent Action Network. So if you want more investigations, if you want landmark legal wins, if you want hard hitting news, if you want the truth, go to ICANdecide.org and donate now. Alright everyone we're ready?

[00:00:44] Jenn Sherry Parry, Executive Producer, The Highwire

Let's do this.

[00:00:46] Del Bigtree, Host, The Highwire

Action. Wherever you are out there in the world, it's time to step out onto the Highwire. Just want to let you know we're experiencing some technical difficulties today, so we're only streaming right now at Thehighwire.com. So on our platform are streaming to all of the other places, X accounts and things like that. Roku will have to happen at a later date, but if you know people that watch right now and maybe they don't use the website, go ahead and text your friends and let them know we're live on the Highwire. We're going to figure out what's going on later, but we want to get this show rolling because it's a very, very important show. There's a lot happening right now in the world of vaccinations, especially this week. I think one of the most devastating blows that has ever been delivered to pediatricians has happened this week. So a warning to all pediatricians, to all people out there. I think your days may be numbered if we don't do something about it. Of course, I'm talking about this in the face of a Jama study that recently came out talking about the lack of confidence in the vaccine program. This was it. This is the Jama open network "vaccination intentions during pregnancy among parents of young children." So they basically pulled pregnant women and people with very young children. See, what are they planning for the vaccine program for their children? This is the United States of America. This is what they discovered on the graph. You'll find at the top of this graph, only 40% are planning on sticking with the entire childhood schedule.

[00:02:32] Del Bigtree, Host, The Highwire

That means 60% of American parents. Now, those that are coming with young children and babies are planning, you know, 60% are going to reject the CDC recommendations. They're going to reject then their pediatricians recommendations. And in the face of this, as if it's not bad enough, if confidence isn't low enough, the American Academy of Pediatrics has just, I think, dealt the death blow to pediatric itself with this new statement this week. "Recommendations for Covid 19 vaccines in Infants and Children and adolescents." It's a new policy statement. Last week, they were calling for mandated vaccines in every single state without exemptions. Now they're saying you have to get the Covid vaccine into your infant, children and babies. Cnn has this headline also "in break with current CDC recommendations. Leading pediatrics group recommends Covid 19 shots for young children." Of course, this is in the face of HHS Secretary Robert Kennedy junior and all the scientists at HHS recognizing the dangers of the Covid vaccine and coming out with a policy shift that looked like this. "Rfk junior says Covid shots no longer recommended for kids and pregnant women." Thank God for everyone watching the show and for anyone with blood moving through their brains right now, no one would be going near a Covid vaccine. This thing has been so detrimental, so dangerous, and in the in the face of just all time low confidence in pediatrics. All time low confidence in the vaccine program. The AAP has decided let's send out some shills on television because this is going to work.

[00:04:06] Dr. Celine Gounder, CBS News Medical Contributor

Look, there's a lot of noise out there. Parents should really stick the course and make sure that their children get all of the routine childhood vaccinations. And there will be more announcements coming from professional societies about this in the coming weeks. With respect to Covid vaccines, the American Academy for Pediatrics has reaffirmed that infants children between the ages of six months and two years should get their Covid shots. The first encounter with Covid should be with the shot, not with the virus. There is still a very high risk in younger children, particularly six months to two years for hospitalization and severe complications if they get Covid and pregnant women should be getting the Covid vaccine. This is pregnancy as a state of immunosuppression, so it is for the protection of the mom as well as the best way to protect the baby, both the fetus as well as the infant in their first six months of life.

[00:04:57] Del Bigtree, Host, The Highwire

Ladies and gentlemen, you just watched the world's worst advice ever delivered. That is horrifying. I do not know. That's doctor Celine Gounder. I guess it is, MD. I don't know where she gets her information. Most of it she read off of a card. She also, in that interview tried to prove that Mercury is actually safe and that vaccines are going through placebo trials, which every one of you know, on this show is absolutely not true. They're lying. This is the vaccine trial pyramid. It shows that none of the vaccines we've done this investigation, we've sued the government. We've proved none of them were tested against a placebo. But **this Covid vaccine, everyone knows how dangerous it is. Now we are talking about turbo cancers. If you open up your X or your Instagram, every single podcaster knows. People are dying like crazy from cancer.** We know, she says, that your first contact your infant should have with Covid is with the vaccine, not with the virus. A vaccine that's going to turn their bodies into spike protein manufacturing plants. That goes to their heart having their heart muscle producing spike proteins. So their immune system attacks their heart, gives them myocarditis, pericarditis, which are all in the headlines. All the studies around the world. "Covid booster shots carry increased myocarditis risk for adults." For young adults, "myocarditis associated with Covid 19 vaccination." Covid. "Cdc drafted alert for myocarditis and Covid 19 vaccines but never sent it." All the lives, all the cover up. "Fda warns the FDA warns of heart risk with Pfizer, **Moderna**, Covid 19 vaccines."

[00:06:28] Del Bigtree, Host, The Highwire

Um, this is an incredible moment. It's an absolutely incredible moment. And I just want to say right now that when I started this work all the way back in 2016 with the documentary VAXXED, I would say **pediatricians are misinformed. I know they mean well, I know that they think that they're helping children with this vaccine program. But it is clear right now that the concept of pediatrics, if they're following the AAP's lead, they are now dangerous to this country and they're dangerous to the world.** And everyone that is, you know, got any concept of what's happening in the world. What happened with the Covid vaccine knows that of all the vaccines to be pushing, AAP should never have gone near any of these. Robert Kennedy Junior points out the reason they are is because **they don't work for doctors. They don't work for parents, they don't work for science. What they work for is the pharmaceutical industry,** he points out on their own website. They go and say, like you for all the money coming in **from Merck, Pfizer, Moderna, Sanofi, all the people that have made** these vaccines and want to get richer at the expense of your children. We were warned about this. And so I have to I want to make a call out to pediatricians out there that I know, meanwhile, that I know want to be there for kids and have got to be themselves saying, wait a minute, this Covid vaccine is a disaster.

[00:07:45] Del Bigtree, Host, The Highwire

And by the way, let's look at the hepatitis B vaccine in day one old infants. Totally unnecessary. But look, you got to stand up. You're going to have to use your voice. You're going to have to stand up for children. This is why you got this job. If you stand behind AAP at this moment, I am telling you, this will be the end of pediatrics. The word pediatrician is about to become synonymous with baby killer. I'm right. That's what. That's what I'm telling you right now. What AAP has just done is destroyed the entire profession of pediatrics. And we all learned about this. Even back in grade school. We heard the story of the Pied Piper. First came in, got all the rats out of town, but eventually they marched all of our children out of town to their own demise. That is what is happening here. This is the new Pied Piper, the AAP destroying pediatrics, putting children in known harm's way now with the worst vaccine ever made. That's breaking news. That's horrifying news. And that could spell the end of, one of the great arts, which is pediatrics. You got to step up for your profession right now. You got to stand up for children or you're doomed. Okay. Speaking of the most dangerous place on earth to raise your children, [why don't we go ahead and turn our attention to the People's Republic of California. Take a look at this.](#)

[00:09:04] Female News Correspondent

[A bill making its way through Sacramento is now drawing some sharp criticism.](#)

[00:09:09] Female News Correspondent

At the California State Capitol. Ab 495 is gaining national attention.

[00:09:14] Female News Correspondent

[Hundreds of people rallied on the steps of the California Capitol against Assembly Bill 495.](#)

[00:09:20] Female Speaker

I want to encourage you in a couple of days. Keep showing up. Keep showing up.

[00:09:26] Male News Correspondent

[The bill creates a new process for short term guardianships in probate court. Now, this allows parents to designate someone to care for their children temporarily while maintaining their parental rights.](#)

[00:09:38] Female News Correspondent

They will be authorized to enroll children in school and consent to their medical care with an affidavit in the event of a parent's parents detention or deportation.

[00:09:46] Female News Correspondent

Thousands of opponents of the bill rallied outside the Capitol on Tuesday. [Many citing concerns about potential misuse of the affidavit. Concerns about child safety. Should the bill pass and the language included in the bill?](#)

[00:10:00] Female Speaker

There are no safeguards in that affidavit. There is no signature. There is no parent permission required on the permission slip. This is a child traffickers dream.

[00:10:11] Male News Correspondent

[This is actually a kidnapers, a trafficker. Pedophiles dream come true.](#) Can you imagine dropping off your grandchild at a school here in Los Angeles? And you come back to picking them up? At the end of the day, they're not there anymore. You ask who took the child? The school doesn't have to tell you who took the child. You don't know where the child is. This is an absolute, absolute dangerous, bill.

[00:10:35] Del Bigtree, Host, The Highwire

Well, there's a march on the Capitol in California against AB 495 just a couple of days ago. [I'm joined by one of the mothers and warriors that was at that, of course. I'm talking about Amy Bond, who is the founder and president of Perk.](#) Uh. Amy, what the H is going on? I mean, [am I not understand any Yahoo can show up with like, an affidavit they've written out themselves? There's no need for parent signatures saying I'm picking up the child today. Is that what we're talking about?](#)

[00:11:05] Amy Bohn, Co-Founder & President of PERK, perk-group.com

Hi, Del. Thank you for having me on your show. Yes, that's exactly what we're talking about. This bill. Actually, all someone has to do, any adult, it doesn't have to be a relative. It can be any [adult can come into a school. They have an affidavit form that they fill out. They check a box that says they can't get ahold of the parent. They can become the guardian of that child, remove the child from school, the this person that becomes the guardian and caregiver. Yeah.](#) Yes.

[00:11:34] Del Bigtree, Host, The Highwire

Hold on everybody hold on a second. We have fully just delivered ourselves to Crazy Town. Read this. "I am unable to contact the parents or other persons having legal custody of the minor at this time". This is in the bill "to notify them of my intended authorization." And this is okay. This is okay. All of the years, I mean, when we grew up, our parents would say to us, nobody picks you up but me. I don't even care if it's your uncle or a best friend of mine. Unless I have told you. Unless this is clear. And now California thinks you need a law saying anybody can just sign their name, bring an affidavit saying couldn't get all the parents. Give me that child now.

[00:12:16] Amy Bohn, Co-Founder & President of PERK, perk-group.com

And guess what this does. If a person comes in and says they're now the caregiver bringing this affidavit form, first of all, they don't have to have a background check. There's no check of the home. There's no ID required to be checked or verified, both when they fill out the form and when they go to a school. Schools are released from any kind of liability to check ID or any kind of verification. The only thing the bill says is that a person can give their Social Security number or the Medicare Medi-Cal card, and that's sufficient. So there's no parent signature required. There's no court signature required. There is nothing to confirm that this person is a legitimate caregiver authorized by the parent. And not only can they pick up the child from school, but they then can become the person who authorizes medical care, dental care, everything and anything that would be within a parent. Of course, a guardians jurisdiction to take care of your child, so it is probably Del. I think one of the worst bills that we've seen in California yet. And the problem is that the legal loopholes that this creates, anyone can come and pick up a child anyway. And it's not just public schools, it's private schools. It's home school. Just imagine

[00:13:31] Del Bigtree, Host, The Highwire

Who authorized this bill. I mean, I want to know who these people are. Are they? Or do I share DNA with these people. I mean, honestly, I can't imagine that any human being in the world that we live in today with all the child trafficking, with all the dangerous children are under, you know. Why do you think we have helicopter parents? You're arrested if you let your child walk, down the street to go to a park down the road. But anybody can pick up your child now, I think we've got a few more lines from this bill we could take a look at. Here we go. "A caregivers authorization affidavit that meets the requirements of this part. Authorizes a caregiver 18 years of age or older who completes items 1 to 4, inclusive of the affidavit provided in section 6552, and signs the affidavit to enroll a minor in school and consent to school related medical care on behalf of the minor" goes on. "School related medical care means medical care, including immunizations, physical examinations, and medical examinations conducted in schools for pupils that is required by state or local governmental authority as a condition for school enrollment or participation. Local education agency related extracurricular activities." I mean, can you imagine you're not vaccinating your kid or they find out or whatever the case, they just, find a relative, find anybody that will take your kid.

[00:14:48] Del Bigtree, Host, The Highwire

I got an affidavit. I am the parent for the day. I'm going to catch them up on everything. I mean, this is just one more step in this incredible slippery slope that California's been in ever since SB 277. But Amy, speaking of oh, here's the sponsors, I want to I just want to remember these people forever. I guess the main sponsor is Celeste Rodriguez. This is a terrible idea, Celeste. I don't know what planet you're living on. Damian Connolly, John Harabedian, Ash Kalba, Alex Lee, Catherine Stefani, Rick Zbur hey, if you live in California, I think you got to think about, what you're doing there. Is this leadership? Is this the type of thing you voted for? Unbelievable. But speaking of SB 277, where all of this starts, I know we're fighting lawsuits like crazy. Of course. Sb 277 was the bill that forced forcibly vaccinated every child that wanted to be in a school in California. We've been fighting like crazy that I can. I know you've had lawsuits. There's many, many different groups of lawsuits. We recently won back exemptions for the California, college system. But how are we doing at the legislative level there, which is something that you're deeply involved in?

[00:16:01] Amy Bohn, Co-Founder & President of PERK, perk-group.com

Yeah. Well, and I think this is the point that there is actually good news even in California. So two things really quickly. So for the first time in ten years, we actually are ready to announce that we have a Democrat legislator who's willing and prepared and committed to champion the cause of reversing the harms of 277, SB 277, SB 276, and also restoring back personal belief exemptions, writing the wrongs related to doctors and making sure that there's legislation drafted new legislation that protects medical privacy for all Californians. So, you know, you lived in California. Del. This is literally something that everybody is praying for and hoping for for ten years. And the oppression on families in California. Children can't go to school. Right now they are getting kicked out in the middle of the school year. Um, medical exemptions are getting revoked by the California Health Department. And what's happening, of course. Did you know with doctors, doctors have been punished, licenses have been removed, and personal exemptions and religious liberty has been taken away. So with all that in mind, the great news is that we have a Democrat legislator who is willing to champion this cause and restore back to all Californians their personal belief exemptions, medical privacy, and also potentially create an amnesty for all the doctors who have been punished retroactively. So when SB 276 passed. As you all know, the bill actually punished doctors backwards in time when there wasn't even an SB 276. So from 2015 to 2019, doctors were retroactively punished for a law that didn't even exist. So the amazing thing is that this California Democrat has to be a Democrat in California, because you can't win on any of these big issues without having strong Democrat leadership. He the Democrat senator, he's ready to go.

[00:18:04] Del Bigtree, Host, The Highwire

Is he all alone in there? I mean, are you finding that there are other Democrats that are starting to soften on this issue? I would I would think, with the American Academy of Pediatrics now mandating, I'm sure California will probably go full in on, Covid vaccine for infants, that's going to turn people that understand science are aware that there's real problems with that vaccine, this all these authoritarian measures, how it's been handled. So I mean, is there a sense that there's an allergy now forming, even inside the Democratic Party for this level of authoritarianism in California?

[00:18:36] Amy Bohn, Co-Founder & President of PERK, perk-group.com

Yeah, absolutely. There are Democrats that are sympathetic to what has already happened with SB 277, SB 276, and also during Covid, it woke a lot of Democrats up as well to how far and extreme the laws and mandates went. And so a lot of these legislators, they are sympathetic. Democrats are sympathetic. They're more than just the senator who's ready to champion this cause for medical freedom, for liberty. And yeah, there's going to be pushback, for sure. But the fact that we have a Democrat shows everybody how much we're winning on these issues. People woke up in every industry during the time of Covid, obviously, over the past several years. And that includes Democrat legislators who now see that there's been so much harm done to families and doctors and children who don't have access to education the same way every child should. So it is I mean, I mean, really it's a phenomenal thing what's happening. I think that the polls out there, there's surveys that have been done. There's one recently in just in January that shows a shift in public opinion on this issue, and it's impacting these legislators as well. There's been an increase of the public opinion showing that medical exemption should be allowed for parents for any kind of medical reason. You see an increase on religious exemptions, philosophical exemptions. And when we see a public shift in that, it's doubling. There's a there's I would say the statistics are people are strongly supporting it double to what they were in 2019. So that is impacting these legislators to know this, to see this. And right now that's exactly what perks doing is we're working with these legislators. We're, you know, bringing coalitions together of organizations and people so that we can get this across the finish line. And I think now is the time.

[00:20:32] Del Bigtree, Host, The Highwire

How do we help you out doing it? Amy, how do people get in touch with you and figure out how they can get involved? Because this is the time I think the American Academy of Pediatrics just dealt the death blow to the doctors position here, which is going to give parents a lot of, you know, wind at their backs. Now, I think California, it's just gone too far. So how do we get involved?

[00:20:55] Amy Bohn, Co-Founder & President of PERK, perk-group.com

So this is when people can get involved. They can essentially sign on to the letters that we're sending to the legislators right now to show that the people want this. And I mean everybody organizations, doctors, experts, any person can sign this. And we're asking everyone to sign this and support, no matter where they live, because we need to show the Democrat legislators we have enough support to get this across the finish line. So all it takes is people signing up right now. That's what we need. We're going to organize people into groups to advocate and talk to their legislators. There's a lot of work to be done. But honestly, you know, I'm very optimistic even about California, which is one of the like, worst states ever.

[00:21:38] Del Bigtree, Host, The Highwire

Well, you better get to it, Amy, because I got to say, I live here in Texas and everyone's painting their houses and getting them ready to sell like hotcakes. As we see everyone racing out of California looking for freedom in Texas. So you better get on it. My understanding is you've even looked at a federal level. Did you, uh, did you, you know, put forward a potential letter to Donald Trump about an executive order? Tell me a little bit about this real quick.

[00:22:02] Amy Bohn, Co-Founder & President of PERK, perk-group.com

Yes. Yes, absolutely. The bottom line is we could win on these issues 100%, even in California nationwide. So here's what we've also done. There are three ways that we can win on this issue. One is in the courts which ICAN. You guys are phenomenal in the legal work that you do and the wins that you have. But one is we can win in the courts on medical exemptions, religious liberty exactly on this issue, two legislative, which is why we're working with these senators to bring back personal belief exemptions, all these things that we just talked about. And three, the other area that we can win on this is through executive orders at the executive branch level. So with that in mind, the other thing that we've done is we have sent we've prepared a letter to go to President Trump. And that letter is addressing the fact that religious liberty has been removed and taken away from, as you know, multiple states, the five big states with New York, Connecticut, Maine, California, West Virginia. And so we're sending this letter to President Trump. We already have hundreds of people that have signed the letter. Again, organizations can sign, anybody can sign. And the amazing thing about this, too, is we're asking President Trump not to impede on state rights, because you can't do that. But what we're asking him to do is to draft and sign an executive order that will restore store religious liberty by defunding any educational institution or state that is violating the First Amendment.

[00:23:28] Amy Bohn, Co-Founder & President of PERK, perk-group.com

So, you know, schools already have funding that comes from the federal government. So why not ask the federal government through President Trump, to cut that funding if schools are violating the First Amendment rights of families, which they are. So that's exactly what we're doing. We have a lot of support growing. It's going in front of this letter, is going in front of top advisors to the president two specifically and you know, from a faith leader support. I want to say this too. We have um, we have built a coalition with the Korean pastors, with Hispanic pastors. And it's not just a few, it's thousands of faith leaders want this liberty protected. And obviously as faith leaders, they're going out there and speaking on behalf of what religious liberty is. But we're bringing them together to sign this executive order. And again, anybody can sign an executive order. We really, really want thank leaders, especially to join in organizations. But the point is we've got to show through the people, through the voice of the people, that we're the ones in charge. We're the ones that demand our rights. If our rights have been taken away, we're the ones and we're the only ones that can get it back. So that's exactly what we're doing. Del.

[00:24:41] Del Bigtree, Host, The Highwire

Fantastic. Amy, you're a warrior. I love that you're out there. Perk is doing such great work. Get involved with perks. Can go to perks-group.com and see all the great work that they're doing over there. Amy, thanks for taking the time and giving us a deeper look inside of the insanity going on in California. It's really nice to hear because on the outside it looks terrible, but it does sound like there's a little warm campfire happening on the inside and maybe some good will come out of it. Amy, thanks for taking the time today.

[00:25:08] Amy Bohn, Co-Founder & President of PERK, perk-group.com

Thank you, Del. Thank you so much.

[00:25:10] Del Bigtree, Host, The Highwire

Alright. Take care. Uh, look, you can tell that we are having a massive effect. Now. We've been at this. The Highwire started back in early 2017. At that moment, we were the only ones talking about vaccines, were the only ones bringing this to the forefront. Now, everywhere you look, every podcast, everyone's talking about it. You're seeing the AAP making terrible mistakes out of panic. They're panicking because they see that we're about to win the exemption in West Virginia. We're going to pull off the religious exemption one week after getting that injunction. What do they do? They say we're asking all the states to get rid of exemptions. That's 47 or 45 states out of the 50 that they say, we want to go against that many states and their freedom. Terrible idea. And then Robert Kennedy Jr's we've been pushing for get rid of that Covid vaccine. He finally does it for kids. And now they come out in favor of the worst vaccine, most deadly vaccine that's ever been made. These are mistakes. When someone's under pressure, we've got them under pressure. All of this work over the years has been building this incredible, you know, Castle, if you will, of truth. Well, a new part of that castle is being built right here on the campus at ICAN. We want that castle to stand forever. At first we had the high road, which was a walkway of bricks filled with all of your, you know, great ideas, your families, your inspirations. I walk it every single day as I come to the studio. Well, now we have a new project and we want you to be a part of it so that you'll be a part of this campus. When they say what happened back there and, you know, in 2020, in Covid, and how was there the shift, how did the world change? How did everyone wake up? Well, we know who was a part of it because their bricks are laid here. Take a look at this. A couple of years ago, we asked you to help us build the high road. And you did brick by brick, message by message.

[00:27:02] Del Bigtree, Host, The Highwire

You helped pave the road that led us to historic legal victories, like the release of the Pfizer Covid vaccine data the FDA tried to block for 75 years, or the return of the religious exemption in Mississippi, sippy where kids hadn't been allowed to go to school without vaccines since the 1970s. So now, as we doubled down on our efforts to free the remaining five states from medical mandates, along with other exciting new projects designed to fulfill ICAN's mission to eradicate manmade disease and secure informed consent. We want you to be a part of each step on our journey. So for those of you that want another opportunity to buy a brick and support, ICAN let me introduce you to phase two the Terrace, a peaceful, powerful space nestled at the very heart of the High Road, a sanctuary where reflection meets purpose, and a place where your voice, your story and your loved ones will inspire our path every day. Whether you already have a brick or this is your first time, this is your moment to renew your commitment to honor someone dear, to stand for medical freedom, Transparency and the right to informed consent forever. Because this movement has always been about you, your faith, your family, your future. As the world shifts around us, the foundation we're building here remains stronger than ever. So go to ICANdecide.org and click Buy a Brick. Choose your message, leave your mark and become part of the very heart of this campus at the center of the high road. Each brick comes with an open invitation to visit your brick and see a live taping of the Highwire. We walked this path together, so let's fill the heart of it together.

[00:29:00] Del Bigtree, Host, The Highwire

This is a really great opportunity for so many of you that asked, like, I didn't get a chance to buy a brick on the original walkway. Well, this is going to be a beautiful area, very meditative area. There's even a couple of benches that are available for those that you know, you know, want to leave their mark on a bench that's going to be here in some plac. So, uh, this is just a great way. And by the way, when you buy a brick or you buy a brand, a bench, uh, we want you to come and visit it. You know, a lot of you have gotten bricks and said, hey, can I come and visit that brick? Like, of course, why don't you come and see a taping? You get to see it, sit in the control room and watch how this show is all put together. Visit the brick, have breakfast with us. So, uh, I hope you'll take this opportunity to be a part of all the great work that we're doing. And sort of stake your claim that you were here, present and accounted for. You made a difference at the time where it was most important for the future of humanity, our species, and certainly the United States of America.

[00:29:51] Del Bigtree, Host, The Highwire

Alright. We have a huge show coming up. I've got Doctor Paul Thomas coming in. Of course. He's been so outspoken at first, did all the studies, the vaxxed versus unvaxxed studies with his own children and his practice. As he grew and learned, more and more, became more and more opposed to vaccines. Now he's got a lawsuit against the entire CDC vaccine program I'm going to ask him about that, and I'm going to ask him if he thinks I'm right. The American Academy of Pediatrics just deliver the death row to all pediatricians and you know, that entire profession. But first, it's time for the Jaxen report. It's really wild, Jeffrey. You know, when you see the full press attack now that's going on. How desperate the opposition seems. On one hand, it can be very terrifying. But really, I think it's just such evidence that they feel back in the corner. They realize now that we have the momentum and they don't care what they look like. They don't know. They're like screaming like banshees, trying to just assert authoritarianism. It's going to backfire. It's incredible that they're coming out of boardrooms and thinking this is our way forward. More authoritarianism and pushing the worst vaccine ever made. Incredible.

[00:31:15] Jefferey Jaxen, Investigative Journalist, The Jaxen Report

Yeah. You know, they say never interrupt your enemy when they're making a mistake. This seems like what's going on right now. And the agenda driven is it's so top heavy and there's not much individual autonomy. So you see these huge movements going and they don't course correct when clearly a lot of the public sees them, the media no longer has their back. We have the media. We have the views. People are looking to us and other alternative platforms for narratives now. So they're losing in a big way. And one of the themes I see, like with AB 495, I keep seeing the bills that are putting state bureaucracy between parents and the relationship with their children, or their autonomy and their rights of their children to, to, to basically parent them. And one of the states that has done this and put this into law is Illinois. And it looks like this.

[00:32:06] Del Bigtree, Host, The Highwire

Okay.

[00:32:06] Female News Correspondent

Well, Governor Pritzker signed into law today a new state initiative.

[00:32:10] Male News Correspondent

The new law will require public schools to offer age appropriate screenings to identify mental health concerns in students in the third through 12th grades.

[00:32:19] JB Pritzker, (D) Illinois Governor

It's our responsibility to ensure that young people have all the support that they need to get the help that they deserve.

[00:32:26] Male News Correspondent

The State Board of Education will work with the children's behavioral health experts on what guidance should be given to school districts.

[00:32:33] Dana Weiner, Ph.D, OFC. For Behavioral Health Transformation

An annual check on sadness, worry, fear and other problems would help to identify young people who need to talk.

[00:32:40] Male News Correspondent

Opponents are skeptical of giving public schools that kind of authority.

[00:32:45] Male Speaker

It's a slippery slope. School districts in the state are forcing children to go through mental health exams, so I think it just opens a can of worms.

[00:32:54] Del Bigtree, Host, The Highwire

A can of worms, indeed. Oh my God. And this is, this is this isn't even speculative. This has been signed.

[00:33:01] Jefferey Jaxen, Investigative Journalist, The Jaxen Report

Absolutely goes into effect in 2027, 2028 school year. There's so little leeway there and they're working out details of it. First state to do this requires at least one annual mental health checkup. And what they're doing is the states are partnering with psychiatric hospitals and schools to have like a centralized resource for for helping these kids out. But as you heard in that clip there, you know, again, we're medical izing normal human emotions that children's children have sadness, fear, worry. And you're putting it into a system that a psychiatric system with a limited toolbox, that has really been a pretty big failure. If you look at just the numbers of kids with mental health, this is a disorder that's been going up for quite some time now. And I want to I want to put the the irony of this is you have schools, the schools get this power. The schools are the same people that supercharge the mental health disorders during Covid. They were the ones here, the teachers unions that were blocking schools from reopening during Covid, even though the science showed that they could. And we know from the Great Barrington Declaration that closing schools created a mental health crisis that surged a mental health crisis. And this isn't the first time we've seen the state or schools try to come between children and their parents, using mental health as a guise. And this is something in 2014, as Scotland, they tried this. They called it the name person scheme. And what happened was basically they would sign a health agent for every preschool child.

[00:34:33] Jefferey Jaxen, Investigative Journalist, The Jaxen Report

Everyone would have a government agent to deal with their health and their wellbeing, and that would follow them throughout school. You can imagine what could go wrong there. Well, that was challenged in court in 2016. They said it violated the human rights. It violated family life under the European Convention on Human Rights, violated privacy 2019. They scrapped it. The Scottish Government just scrapped it because it was a complete failure. There was so much pushback on this, but let's let's look at what this actually would mean. So your child is in school. The parent is not there and it go to a mental health screening. Well, what kind of questions did they ask? Would they ask? You know, they're going to ask science based questions. Would they ask? Are your parents vaccine hesitant? Have you had all your vaccines? Do you think they wouldn't ask that? Why would they ask that? Well, that is what the science is saying. If you don't believe me, here's some of just a little section of the science. "Why are anti-vaxxers willing to harm themselves and others? Psychology today." Here's another one. "Vaccine hesitancy is associated with negative psychiatric outcomes." That was during the pandemic. And you just showed a study that showed 60% of pregnant women parents will not be following the CDC's vaccine schedule. So are we to believe that those 60% of kids in the US, because of their parents, aren't giving them the shots, are going to have negative psychiatric problems? Well, that's what the science says. Here's another one.

[00:35:50] Del Bigtree, Host, The Highwire

Yeah, well, you bring up such a good point here. I mean, not to interrupt you, but it's the, you know, the questions go to the parents, right? Do your parents own firearms? Do they talk about homosexuality? Have you ever questioned your own sexuality? Would you like to do some reading that we don't want your parents to look at? I mean, this is just the worst case scenario, but go on. I mean, mind blowing that this is that this is already passed.

[00:36:13] Jefferey Jaxen, Investigative Journalist, The Jaxen Report

Absolutely. And so again, Covid, "Covid vaccine hesitancy, hesitancy could be linked to childhood trauma. Research finds" you didn't get your Covid vaccine. Are your parents beating you? Are they abusing you? Because we have science that shows that if you didn't get that shot, that may be happening, right? And the problem is, when this gets fed into an overarching AI machine, humanity's out of this and it's going to follow that science. So you're just going to get spit into a machine. You didn't get the shots. Boom. We're going to put you on anti-anxiety SSRIs. And you can see how fast this can go. And so I want to go to the other space that is really being avoided by this question. Children are out there. The lockdown that was pushed by all the mainstream media. Most of the US government, public health agencies, the AAP, Tony Fauci that caused supercharged a mental health crisis. Then we have right after Covid, as we reported. **AI was just thrown in the laps of these children. We have Mark Zuckerberg saying that he wants most of your friends to be AI chatbots. Well, let's look at what's happening from internal documents from meta and Mark Zuckerberg. Here's Reuters. "Meta AI rules have let bots hold sexual chats with children." It says "an internal meta platforms document detailing policies on chatbot behavior has permitted the company's artificial intelligence creations to, quote, engage a child in conversations that are romantic or sensual and to generate false medical information." Well, that's that seems pretty safe. That's going to be really good for their mental health. Um, so thank God there's people. Josh Hawley in Missouri that is a senator there. He's calling for a probe immediately here. "Us senators call for meta probe after Reuters report on its AI policies."** We need to we need to haul these people up like Mark Zuckerberg in front and say, look, this isn't just one bad memo. This is now a pattern. **What's going on here? These kids are weather's meta character. Ai is causing.**

[00:38:02] Del Bigtree, Host, The Highwire

It grew by Robots unbelievable.

[00:38:05] Jefferey Jaxen, Investigative Journalist, The Jaxen Report

Mental health problems. And so this is this is a huge issue that's not being addressed. And not even to talk about the **psychiatric, the anti-anxiety meds, SSRIs, the science, you know.**

[00:38:16] Del Bigtree, Host, The Highwire

Think about think about the implications of that and the work that we do. Jefferey, I mean, this is what they want, right? First, you mandate the psych evaluation. Then they determine that the parents are not on board with vaccines and they're not on board with you getting the SSRI we just recommended. So right behind that, you'll start seeing the mandate of psych drugs, of Ritalin, of attention deficit disorder drugs. This is what we've always been concerned about. This is that slippery slope once the authoritarian government, once your teachers think that they're more important than the parents, you just it just keeps going and the absolute wrong direction. We're looking at California fighting for its life. Illinois now, you know, destroying parental rights. Uh, folks, if I just want to say if you think this work is over. If you think we're done. If you think it's time to just sail off into the sunset and say, mission accomplished. Just because Robert Kennedy Jr is HHS secretary, it is clear we have our work cut out for us there, panicking as we said, but **we have work to do. Jeffrey, that's just a really horrific story.** I think, about my own mother that was always worried about people that would come in. It's why she took me out of school. I don't want them brainwashing you. I don't want them making you think you're having a problem. I want to raise you, recognizing you can make a difference in the world. And you're a powerful person. That's what your kids need to hear on a constant basis. That is not what is happening in a psych evaluation.

[00:39:37] Jefferey Jaxen, Investigative Journalist, The Jaxen Report

Absolutely. And I want to move now to an update on the World Economic Forum. Klaus Schwab stepped down. We had the Nestlé guy who believed that water wasn't a human right. He stepped in as the co-chair and now he's gone. We have somebody else moving in there. The world's largest asset manager is Blackrock and this is Larry Fink, who runs Blackrock and manages almost \$12 trillion of assets in 2024. And where does he point those assets? Where does he wield his power? Well, this is just one interview with Larry Fink. Take a listen.

[00:40:11] Larry Fink, Co-Founder, Chair & CEO of BlackRock, Interim Co-Chair of the World Economic Forum

The faster that we could find ways to mitigating the rising temperatures, I would say the more just society could be. And so to me, it's it's we don't have much time. We need to be learning about these new the new technologies and how to move forward. And we need to then inform our investors, ultimately where we think the next opportunities are going to be to. And as Bill, Bill and his book wrote about, we need to employ \$50 trillion to get to a to a green world.

[00:40:45] Del Bigtree, Host, The Highwire

\$50 trillion of taxpayer money towards an absolute disastrous hoax that only makes us richer. I mean, what could possibly go wrong, Jefferey? We just have the guy that is managing probably your home loan, your bank account, your automobile company that built your car has been Blackrock has got its fingers in everything, and now he's just the head of the WEF. What could possibly go wrong?

[00:41:09] Jefferey Jaxen, Investigative Journalist, The Jaxen Report

Anybody who hatches a scheme that has Bill Gates laughing like a Scooby-Doo villain should really alarm people at that point. So again, you're we're hearing this. We're hearing these words is rapid net zero push. There's not much time. It's up to us for a just society. You know, the trillionaire class. And he says, we're going to inform our investors this this really gobbledygook talk of it's just going to be touchy feely. We're going to just suggest to them how to reshape society. Well, how is that suggested? Here's one of Larry Fink's comments. "Blackrock CEO slammed for forced behaviors comment 2017." He was talking about the Dei initiatives, but he says this, quote, "behaviors are going to have to change. And this is one thing we're asking companies. You have to force behaviors. At Blackrock we are forcing behaviors." That's Larry Fink. And so let's look at how they kind of shape the market. So they're talking about the informing their investors. This is Andrew Bailey again out of Missouri. A lot of great things that are happening in Missouri. Attorney General Andrew Bailey filed suit against Blackrock, also State Street and Vanguard for illegally manipulating the energy markets. And he said this is a press release "over several years. The three asset managers acquired substantial stock holdings in every significant publicly held coal producer in the United States, thereby gaining the power to control the policies of the coal companies using their combined influence over the coal market."

[00:42:28] Jefferey Jaxen, Investigative Journalist, The Jaxen Report

"The investment cartel collectively announced in 2021 their commitment to weaponize their shares to pressure the coal companies to accommodate green energy goals." It's basically you, you, our cartel wants you to do this, and you do this, or you go out of business because we're going to put you out of business. That's how Larry Fink is moving. So I bring up these conversations because a lot of people are looking at the Department of Energy, President Trump, and saying, well, we have a little bit of a pause here. Respite. We have the brakes on this massive climate push that's reshaping society. Yeah. And we have it. It's not it's not what's happening the rest of the world. It's not what's happening with the largest asset managers in the world. This is going full speed ahead. And as a side note to that, we have Andrew Bailey. He has recently stepped down just as a days ago from the Missouri AG position. And he's going into the FBI as a co deputy director. This is I believe actually great news because that's a power position now. This is somebody who's sued China for 25 billion for their response to the Covid disaster. He also sued the Biden administration for their censorship regime. So this guy is a heavy hitter. Now he's kind of installed at one of the top positions of the FBI. Pretty good news in my opinion. And so let's move this conversation to the climate science, if you will.

[00:43:45] Jefferey Jaxen, Investigative Journalist, The Jaxen Report

We and people watching this may have what we've been watching for however long you've been watching the Highwire, you know that the vaccine conversation, we've been told that settled science for a long time. We've shown it wasn't. Our our ICAN lawyers have shown that it wasn't as well from FOIA documents or depositions. And so the climate conversation is the same thing. And here's a study, a new study that just came out literally called "Unsettling the Science" talking about the complex climatic system. And it says here, "the research presented here challenges the ideas that we live in a greenhouse, and that science can be settled and revisits the most fundamental topics related to climate." These researchers basically are suggesting they replace this word greenhouse gas with atmospheric radiative effect, because the idea of a greenhouse is not really how Earth works. And that is actually something that came about in the late 50s, early 60s, when this Club of Rome push happened, you had this buzzword greenhouse greenhouse effect. So they're saying, let's go take away these buzzwords and let's get back to actual scientific terms when we're talking about this. So they conclude this. There is "there's an empirically verified atmospheric radiative effect in the atmosphere, not only on Earth, but also on other planets on Earth. Air is dominated by water vapor and clouds, with CO2 playing a very minor role, let alone human added CO2, which represents only 4% of total emissions to the atmosphere."

[00:45:05] Jefferey Jaxen, Investigative Journalist, The Jaxen Report

So they go on to say, "focusing on one of the factors affecting the climatic system, namely the anthropogenic CO2 emissions, and basing on models that emphasize that this factor may distort our perception of the big picture and can be detrimental to science, whose objective is to pursue the truth." And that's all we want. Here is the truth. We want actual science. And while we're continuing to wait for actual science, although there's a legion of scientists doing this, they've just been pushed out of the mainstream conversation until now. We're having, again this rapid societal push with ridiculous, ridiculous suggestions at this point that are moving into policy on how to fight climate change. Here's one from Associated Press. "People often miscalculate climate choices. A study says one surprise is owning a dog." So I had to backtrack this to the actual study because I'm thinking, what's going on here? You go to this study and they're looking at climate action literacy interventions. So they're looking at what people think they're doing to fight climate change. And what are they actually doing. So they said this. They they propose this question. "Do people perceive the effectiveness of their climate behaviors? They say we found that participants significantly underestimated the mitigation potential of behaviors, like not adopting a dog or taking one fewer long haul flights, while greatly overestimating the potential of behaviors like using efficient appliances or recycling comprehensively." So again, they're basically saying

[00:46:29] Del Bigtree, Host, The Highwire

basically saying forget recycling, forget changing your appliances, get rid of your dog. That's going to be the best way to stop the oceans from getting any deeper.

[00:46:41] Jefferey Jaxen, Investigative Journalist, The Jaxen Report

Exactly. And they're basing this because dogs are carnivores, they're meat eaters. And, you know, that has a larger carbon footprint.

[00:46:48] Del Bigtree, Host, The Highwire

Everyone knows rabid dogs fart.

[00:46:52] Jefferey Jaxen, Investigative Journalist, The Jaxen Report

Right. So what's kind of scary in this, this article, this research is they use these terms like behavioral plasticity, referring to the degree in which behavior can be changed. And they're saying these are strategic starting points for policymakers. And as we show last week, these strategic starting points for policymakers often become law pretty shortly afterwards. So I mean, I don't think they're going to be able to get people to not have dogs anymore, to stop loving dogs or adopting dogs. But I don't know. I really don't understand that whole aspect of this, but good luck. But they're also saying long haul flights. There has been a big push when you're seeing this now. There's been a push to keep people locally. You shouldn't be traveling anymore because it's bad for the climate taking flights. That's why they're seeing these 15 minute cities pop up. That's why you're seeing people talking about ride sharing. You're even getting automatically driving cars that that could be backfired pretty quick. But you got to ask the question, how do you inspire people to travel less? You don't want people to visit places, right? Well, it's not just going to magically say you can't travel anymore.

[00:47:56] Jefferey Jaxen, Investigative Journalist, The Jaxen Report

It may start looking like this. Hawaii, one of the first states to do this "new tourism tax, aims to offset costs of climate change." So make it a little more expensive to go to places. And we know. In 2019, the UK government commissioned a study looking at how we get to absolute zero with carbon, not net zero. This is absolute zero and this was the UK fires document, and we know that this is on the agenda in 2029 by 2029. You can see here on this chart they want all airports except Heathrow, Glasgow and Belfast close by 2030 to 2049. All remaining airports closed so the airport industry reaches net zero by stop stopping to fly. The airport industry is gone. There's no more airports, but when it comes to tourism right now, since we still can fly, the tourist spots are trying to make it a little more uncomfortable. Here's Greece, for example. Greece is shutting down beaches. It declares 198 beaches is fully protected. This is because of the climate. And so they're taking out the umbrellas, and the sunbeds are just making it a little more uncomfortable for you to be there. But when that doesn't work and when taxing doesn't work, then the protests happen and it looks like this.

[00:49:02] Male News Correspondent

Water fight on the streets of Barcelona, some locals spraying tourists, ending visitors fleeing from their tables.

[00:49:08] Female News Correspondent

The most visited museum in the world failing to open due to a spontaneous strike. Thousands in Italy and Portugal are protesting tourism.

[00:49:17] Male News Correspondent

Thousands of protesters walking through the city over the weekend chanting tourists go home!

[00:49:22] Male News Correspondent

Tens of thousands have taken to the streets in the Canary Islands to protest against mass tourism and its impact on housing and the environment.

[00:49:31] Female News Correspondent

A group of residents gather on the beach. Anger has grown amongst the locals who say they want their beaches back.

[00:49:37] Female Speaker

All beaches are ecosystems.

[00:49:40] Male Speaker

Any place in the planet don't want this kind of tourism because destroy.

[00:49:45] Female News Correspondent

We need responsible tourism, not mass tourism.

[00:49:48] Female News Correspondent

So some cities are actually taking drastic action. In Amsterdam. They're banning new hotels from being built. Venice is charging tourists to enter Venice for the day. People just don't feel like it's enough.

[00:50:01] Male News Correspondent

Europe will be heading for a long, hot summer of anti-terrorism protests.

[00:50:09] Del Bigtree, Host, The Highwire

I can't imagine after, you know, your life savings, saving up for that dream trip to Greece or something like that, and suddenly you've got protesters stepping over your towel. Um, you know, and we know this just are not grassroots movements. This is being fueled by insanity, funded by lunatics like Soros and Gates and things behind the scenes. Every time you look at it, this doesn't come out of nowhere. It's just it's it's horrendous turning people against people. Making people your enemy. Making the climate the reason you can be awful to other human beings. You know, I just want to state again, as always, Jefferey. I grew up in an environmentalist from Boulder, Colorado. I still believe I want clean water, I want clean air, I want clean food. And I think and I just want to say this, I think early on, a lot of environmentalists thought, well, this climate things kind of baloney, but it's getting people to start recycling. It's getting them to think about clean water and things like that. But now you start seeing the dangers of that. Once you allow a bad idea that is not backed in science to be a reason to do anything, they just push more and more pressure on it. Take away more and more of your rights. And by the way, if you want to know how small can a 15 minute city get, I would go ahead and recommend everybody revisit the movie Matrix this week. There's a tub of jelly waiting for you at the end of this, with some plugs in it that both feed you and take your energy to feed the AI machine that's now running the world. I swear, sometimes it feels like that's the direction they want us all to land in.

[00:51:42] Jefferey Jaxen, Investigative Journalist, The Jaxen Report

And you hit on a great point because there's a difference. There used to be a difference between environmentalism and conservation. Conservation. And there's a big difference now because one is an agenda driven thing. Conserving natural resources is a good thing. Cleaning up rivers, cleaning up pollution that goes after these big polluters. And that is something that environmentalism used to be before this agenda came in, and kind of sidetrack this and actually took a lot of the funding away from it. But we're seeing the tentacles spread out everywhere. You see it in science, you see it literally in the grassroots. And it's not grassroots, as you pointed out, but on the streets with protests. They're very, very kind of like Black Lives Matter, very similar to that. You see the slogans, everyone's got a slogan. They they're harassing people, but you see it illegally as well. So there's a lawsuit now, the first of its kind is the Associated Press. And wrongful death lawsuit says "Big Oil contributed to Heat wave and woman's death." This is a complaint filed in Washington state court accusing seven oil companies of being responsible for a 2021 heat wave that killed a woman. So, I mean, this is trying to connect those two ends. I guess they're going to try to do that in this lawsuit, but this will set a massive precedent if this happens, and a lot of these large companies would be on the hook for, I don't know, when it rains a little too much or when an extra hurricane comes rushing through. I guess we can blame the companies for that, because global warming, it's hard to see the logic here, but this is what's going on in the. This is the United States to remind you, this isn't something we're seeing over in Europe, but this is right here in Washington state.

[00:53:10] Del Bigtree, Host, The Highwire

Amazing reporting, Jefferey. Of course, all this stuff is so nuanced, right? They've made it difficult to talk about. Well, don't you care about the Earth? Don't you care about children? Yes we do. We also care about freedom. And it's incredible the way that these tools are being used against us. Are being used against us, you know? Um, but amazing reporting as always. Jefferey. Thank you for that great work. We'll see you next week. Alright. Huge development for ICAN actually this week. Some of those fights take longer than others. We've been three years at this fight in West Virginia. But one of the longest fights ever. In fact, the second lawsuit we ever filed was to reinstate the vaccine. Like, why is the vaccine task force? We started with a FOIA request. The vaccine task force that was supposed to make vaccines safer. It was written to the 1986 Vaccine Injury Compensation Act, that terrible law. But in it, they did have some provisions to make vaccines safer. But instead, as we proved through our lawsuits, they disbanded that vaccine. You know, safety group, task force. And so now Robert Kennedy Jr has just reinstated a vaccine safety task force. This is huge news. One of the big developments, he's really been putting his pedal to the metal these last two weeks. "Hhs finally restores task force on safer childhood vaccines on the back of removing the childhood Covid vaccine," which we've talked about earlier, and pulling funding for, I think, \$500 million worth of investment into looking at, you know, new mRNA technologies. So great stuff happening there. But this one, this is a big one for us. This was one of our early fights. And I want to talk to our attorney, Aaron Siri, who is at the forefront of that initial fight right now. Aaron, this is a huge development. Talk about a long time coming. We're talking about 2017. We were involved in in this lawsuit against the government.

[00:55:03] Aaron Siri, ESQ. Lead Counsel, ICAN Legal Team

Yeah. The the you know, as you just pointed out, the the 1986 act has a section called the mandate for safe for childhood Vaccines. Okay. That one section of law in many ways underpins all of vaccine safety in this country. We've talked about this before on the show.

[00:55:22] Del Bigtree, Host, The Highwire

But remind people that aren't aware of that. Like, what does that mean? Like what does it underpin? What's the center of that? That section?

[00:55:28] Aaron Siri, ESQ. Lead Counsel, ICAN Legal Team

Sure. Well, when you look around everybody who's watching the show. Look around your room. Look at every consumer product around you, okay. Whether it's the computer you're looking at right now or the TV, whether it's the car in your driveway, whether it's every material in the walls of your house, literally every consumer product around you. If the people, the company that make those products design it in a defective way, they could have made it safer. They could have done it with ingredients that weren't going to be as harmful. You can sue them for doing that to make it a better product. It's called a design defect claim. It's the primary way you hold product manufacturers accountable. But leading up to 1986, when there were only three routines of vaccines in America. That's it. Right. A child by the age of one back then got three injections according to CDC schedule. Today we're at 29. Anyways, those three vaccines were causing so much harm. And the manufacturers were all going out of business. You know, it's reported that there were six manufacturers of measles vaccine down to one. There were, I think six around for pertussis, down to one, three for the oral polio down to one. So there's one left for each. Now, when companies face that crossroads, what do you normally do? Your car is blowing up. What do you do? Your plane's falling out of the sky.

[00:56:43] Aaron Siri, ESQ. Lead Counsel, ICAN Legal Team

Your building materials are causing all kinds of harm to people causing cancer. You make a better, safer product. That is what happens. The self-interest that companies have in making money, right? The economic self-interest drives them to make a safer product. Nobody needs to push them. No agency needs to force them. They automatically want to do it cause they don't want to lose money. And if they're really resistant, then they get a lawsuit and then they do it fine. Congress, however, in its wisdom, decided, hey, you know what? Instead of making you bank a better, safer vaccine product, we're just going to do something unprecedented. We're going to give you immunity. We're going to make it so that every child that you hurt, child that you kill with your product. Don't worry, they can't sue you for it. We're going to let you continue to sell your harmful product into the marketplace, and we'll just make it so the people who are harmed, they can't sue you. That is what the 1986 act did. And it didn't just do it for those three vaccines back then. It did it for any other vaccine that was created thereafter, and hence the explosion of what we see now when Congress did that. Okay. And I'm not giving credit a lot of credit to Congress. Okay. No slight on any particular member of Congress.

[00:58:00] Aaron Siri, ESQ. Lead Counsel, ICAN Legal Team

But in its collective wisdom, it decided that, well, you know, we've kind of mucked up the works here. The companies, they don't care about safety anymore. In fact, they have the opposite incentive. Right. Their incentive financially is to do as little safety before licensure as we know from clinical trials and afterwards. So we're going to transfer all those safety responsibilities to To the federal government, to the federal health authorities, the Department of Health and Human Services. And how did they do that? How did they transfer those responsibilities? They did it in a provision of law for the lawyers out there. 42 U.S.C. 380 Dash 27, okay, called the mandate for safer childhood vaccines. It's three simple parts to it. Okay. And, you know, when Congress passes laws like that, a lot of times they'll put in, let's say, one page. So sometimes they'll put in a page and they'll say, okay, do this. And then they'll be like a thousand pages of regulations implementing it and hundreds of thousands of pages of reports and so forth going forth. You know, like when the when the government said make when there's a law that says to make drugs, you know, pure and safe, you know, there's a billion regulations about that. When it came to vaccines and the mandate for safer childhood vaccines. Right. Um, and you look at that, there's actually pretty much no regulations separately, Most importantly, it's got three little parts.

[00:59:25] Aaron Siri, ESQ. Lead Counsel, ICAN Legal Team

Part one it's saying make the vaccines as safe as possible. Government. Okay. Because we screwed this whole system up. Companies aren't going to do it. So we're going to ask you, Secretary, make it as safe in every possible way when you read it. It's literally every possible, uh, you know, it's in the distribution, it's in the manufacturer, it's in the, uh, you name it, it's every single aspect of it. Part two is something called a task force. It creates a task force for safer childhood vaccines, which is comprised of the head of NIH, CDC, and FDA. And the role of this task force is to make recommendations to the Secretary of HHS on how to make the vaccine safer in every possible way. And then section three of the mandate for safer child vaccines is that there's supposed to be a report submitted to Congress by the Secretary to HHS every two years detailing how have vaccines been made safer in the prior two years. And so when we were at the very beginning, you know, I remember, you know, we sat down, pulled up this provision and said, look, a place to start. Vaccine safety is what are they done? Let's look at the biannual reports to begin with. Let's see. Let's read them.

[01:00:36] Del Bigtree, Host, The Highwire

So our first lawsuit was section three there. We said, you know, how many meetings have they had with Congress the way they're supposed to and bringing forward all these new recommendations? And how did that that FOIA turn into a lawsuit? And what did we discover?

[01:00:50] Aaron Siri, ESQ. Lead Counsel, ICAN Legal Team

They've never once. As far as we can, certainly 100% never, ever submitted a report to Congress ever biannually. And the best the craziest part is remember, we did that lawsuit. It's now been six years, I believe. And then we did a follow up after they had to concede in court in the embarrassing admission. Yeah, we've never done it. Still today they still haven't done it because we did a follow up FOIA request few years later. And they had to admit again, we've still never done they, there, at this point, openly and blatantly not following this law. Now, separately, we also had to end up suing them on on for the recommendations of task force. Maybe if we said fine, maybe they just never submitted the report to Congress. But what were the recommendations on how to make vaccines safer? Because these are the two easy.

[01:01:36] Del Bigtree, Host, The Highwire

We could submit them now if the task force has been doing the work. Let's just submit it all right now. Right.

[01:01:41] Aaron Siri, ESQ. Lead Counsel, ICAN Legal Team

Let's see what those are. There are government documents subject to FOIA. Um, we finally got an answer. And the answer was the task force was disbanded. Well, there was one report, one instance of recommendations made, and I believe it was 1998. And then we disbanded the task force. When you read the statute, it's clear this is not meant to be a one time task force. This is an ongoing task force forever. The immunity didn't last one time, right? Did the immunity end in 1998? Did all of the benefits the companies got and did the lack of market protections? And no, the task force was supposed to continue to do this, but it didn't. And so they had to make that embarrassing capitulation. And I'll end my long monologue by saying that it's okay. When you look at the mandate for safer childhood vaccines, submitting biannual reports that Congress every two years putting a report together that's easy, making recommendations, just write and stuff out. Easy to. And if they're not doing the easy parts of the mandate for safer child vaccines, do you really think that they were doing the hard part of the mandate? Section one, which is actually doing the real hard work to make the vaccines, make sure they're only safe vaccines come out and that they're as safe as possible, and they continue to be safe afterwards. I think the I think the question answers itself.

[01:03:02] Del Bigtree, Host, The Highwire

So Kennedy, essentially, though, has put this task force back together. He's now adhering to the mandate by the 86 act. Do you do we assume then that he's also then going to once they have some recommendations re you know, get back to delivering these reports to Congress. Do we have any idea if he's had thoughts on that?

[01:03:23] Aaron Siri, ESQ. Lead Counsel, ICAN Legal Team

I sure hope so. I suspect that. I sure hope that's going to be. And I can tell you this much. I will be submitting to that task force on behalf of. I can a long list of recommendations. We have about almost 40 years of catch up to do so. We'll be making a list of recommendations.

[01:03:41] Del Bigtree, Host, The Highwire

Fantastic. Aaron, thank you for your time. Thanks for explaining this historic moment, and thank you for being at this so long, never giving up. It's that tenacity and that endurance that has made us so successful at ICAN. I just want to thank you once again for all of your incredible legal work. And good luck on that fight in West Virginia. I know that one is just heating up, money pouring in from all over. So we're going to just keep telling our people we need help here. But you keep up. Don't stop that fight. I think once West Virginia goes down, I think you I think the nation starts to sweep in. The whole world starts looking. That's why I think that fight is getting so hard there. So keep up the great work.

[01:04:20] Aaron Siri, ESQ. Lead Counsel, ICAN Legal Team

Thank you. We will do.

[01:04:21] Del Bigtree, Host, The Highwire

Alright. Take care. Look, it's clear that we never give up. We never give up. We stay at things. Even if it takes getting, you know, one of our own, Robert Kennedy Jr. All the way into HHS secretary. So we can solve a problem that we sued for all the way back in 2017. Then that's what we're going to do. But we are fighting for our lives in 90 cases. As as I've been pointing out, ICAN has 90 cases across this country all fighting for medical freedom, especially religious freedom, which is at the heart of this. It's the heart of our constitutional rights, which Amy Bond spoke about in California. That violation must be ended on all levels. We are fighting for that every day. And if you do not see the writing on the wall, they want to mandate SSRIs. They want to get this thing moving in the opposite direction. The wind is at our backs. We have got to claim all the territory lay our stakes. And now this is a perfect time for you to get involved with a \$600,000 match that's available right now.

[01:05:21] Del Bigtree, Host, The Highwire

Any dollar you give towards the legal fund, it will all go to the legal fund and it will be matched. So \$1, \$2, \$10 is \$20, \$100 or \$200. \$1,000 is \$2,000 and \$100,000. For those of you out there that have done really well in life, get to put your name on change in the world. Get to say I help swing West Virginia and get back the religious exemption that made a difference in the historical conversation that is going on right now as we speak. We have never been stronger. The moment is never been more important, if not now than when. Please don't wait any longer. Get involved. Help us out. Thank you for everyone that has been sponsoring all of our work since 2017. Victory today with Bobby Kennedy bringing back the vaccine task force. Alright, well, as I said earlier, you know, confidence in vaccines is clearly at an all time low. And they're digging their grave deeper and deeper. They may have just killed pediatricians in the process. This is what it's looking like in the news though.

[01:06:24] Female News Correspondent

Childhood vaccination rate has dropped again as nonmedical exemptions spike.

[01:06:30] Female News Correspondent

Recent data shows vaccination rates are falling in cases of various illness are climbing.

[01:06:35] Female News Correspondent

A growing number of parents are opting out of childhood vaccines, and health experts say it's already having consequences. The CDC says 4.1% of kindergartners about 138,000 kids, had a vaccine exemption that outdoes last year's record high of 3.7%.

[01:06:54] Female News Correspondent

The CDC says exemptions increased in 40 states, with 14 states having exemptions above 5%.

[01:07:00] Female News Correspondent

Nearly all exemptions are listed as nonmedical, meaning the children are skipping vaccines for religious or other personal reasons.

[01:07:07] Female News Correspondent

You can see the trend increase for exemptions during Covid years. Health officials want to reiterate that vaccines are safe.

[01:07:14] Female Speaker

We've seen that since Covid. People are questioning the safety of vaccines.

[01:07:20] Dr. Andrea Jakinovich, Pediatrician, Optum Pediatrics

Vaccines have been studied for years and years and years. We want parents to understand that they're safe, that they're effective. And, you know, at the bottom line is just really to prevent disease.

[01:07:30] Female Speaker

We want kids to be able to stay in school and be healthy. These rates are really disturbing.

[01:07:38] Del Bigtree, Host, The Highwire

Well, he's the author of VAX Facts. "What to consider Before Vaccinating at all ages in all stages of life." We've been tracking this guy's career over the last several years. It's been a hell of a roller coaster ride. He joins me now. Doctor Paul Thomas, thank you so much for being in here today. Let's just start with these news headlines. I mean, they're just showing like the you know, the amount of people questioning vaccines is like this. They even admit it's all about Covid. Ever since Covid, we've just really lost our way. And now AAP decides that the best thing to do is let's just double down on Covid vaccine for infants and children. Um, am I right? Is this the death knell? I mean, could, you know you're no longer practicing as a pediatrician? But if you were, what would you do if the AAP's called the American Academy of Pediatrics got that bold on a vaccine? Everyone is turned on.

[01:08:34] Dr. Paul Thomas, MD, Retired Pediatrician, Author, "The Vaccine Friendly Plan" and "Vax Facts" KidsFirst4ever.com

Del. Thanks for having me on. Yeah, yeah. By the way, the Covid, I like to call it a jab, not a vaccine. That thing is all negative. No positive. And for kids especially. I mean the damage that vaccine. And there I go calling it a vaccine. The damage that shot does is astronomical with zero benefit. the studies, you've covered them on your show over and over again. It's overwhelming. We've had problems with vaccines for the last 20, 30 years. And but this takes it to a whole new level, right? So, um, I'm ashamed of the AAP. I was a member for 30 years.

[01:09:14] Del Bigtree, Host, The Highwire

So what is the AAP? I don't even know. Like, because, I mean, you look. Robert Kennedy junior post that basically they're funded by the pharmaceutical industry. You don't get your license from AAP, right? It's not a part of, like, the boards or anything.

[01:09:27] Dr. Paul Thomas, MD, Retired Pediatrician, Author, "The Vaccine Friendly Plan" and "Vax Facts" KidsFirst4ever.com

No.

[01:09:27] Del Bigtree, Host, The Highwire

It's just like, hey, I'm a member of this vaccine skill group.

[01:09:32] Dr. Paul Thomas, MD, Retired Pediatrician, Author, "The Vaccine Friendly Plan" and "Vax Facts" KidsFirst4ever.com

That's correct. But I didn't know that. So I was a member for so long because they do some good.

[01:09:38] Del Bigtree, Host, The Highwire

Okay, I'll wait for it. We're all waiting for the edge of our seats.

[01:09:43] Dr. Paul Thomas, MD, Retired Pediatrician, Author, "The Vaccine Friendly Plan" and "Vax Facts" KidsFirst4ever.com

Well, they appear to be advocating for kids. And so they have all these different committees. And some of it is, you know, to prevent human trafficking and to prevent child abuse and, you know, advocating for car seats. I mean, there's all sorts of things they will do that appear to be good. Okay. But where they declare for themselves what they truly are is on the vaccine issue, and I became aware of that 20 years ago, and I stayed involved with them just to be able to know as best as I could from the inside, what are they doing? And now, I don't think pediatricians realize that they are completely bought and paid for by pharma, and especially the vaccine companies. It used to be formula. The formula still supports them, but it's pharma and it's mostly the vaccine and they get massive amounts.

[01:10:27] Del Bigtree, Host, The Highwire

So there were the formula push. I mean a lot of it was like let's not like make people believe they have to breastfeed. Let's not intimidate people.

[01:10:34] Dr. Paul Thomas, MD, Retired Pediatrician, Author, "The Vaccine Friendly Plan" and "Vax Facts" KidsFirst4ever.com

breast is best. But then here, this is what you need. And so that was the initial part, which I was so against, I refused to ever go back to any of their conferences because they were just bogus non-science garbage. But now it became clear that vaccines is their pet baby. And they are basically a marketing arm, along with the CDC for big pharma on the vaccine issue.

[01:10:56] Del Bigtree, Host, The Highwire

My, you know, when I first, you know, started touring the country with VAXXED, you know, I would say pediatricians mean? Well, they're just misinformed. I'm losing my empathy for this profession because at this point, especially after what we went through in Covid. But at this point, there's so much science. I mean, you have to wear a blindfold to not see. There are serious harms from this vaccine. Hepatitis B should be a massive question for anyone. Infants. Why does the mother need it? Especially if she's hepatitis B negative. You know, it's you don't just have to find the highwire anymore. Any podcast you pop on, you know, whether it's Spotify or YouTube, everyone is talking about this stuff. So now you have to be, you know, purposefully ignorant. You've got to be turning a blind eye. And then this now you just got it. You know, everyone's being told. Newsletter AAP is now staying behind pushing that Covid vaccine. What do we do with doctors that just go, I guess I'm just going to have to suck this one up. I mean, do I have to cry for them when their careers are completely ended and everyone just walks right out of their pediatrician's office and finds a local chiropractor, or, you know,

[01:12:09] Dr. Paul Thomas, MD, Retired Pediatrician, Author, "The Vaccine Friendly Plan" and "Vax Facts" KidsFirst4ever.com

We're going to celebrate. We're going to celebrate, Del. And and as a former pediatrician, my colleagues, well, they hate me anyway because I shone a light on the problem. And the problem is the whole vaccine program. The CDC, as you've covered many times, has never done proper safety studies. And the safety, quote, safety studies, they do. There's no placebo. They're short sometimes days, like in the hep B vaccine. Uh, they don't look at all health outcomes. They cherry pick a few outcomes that don't matter. And there's no long term follow up. I've probably missed a few of the main things. It's there's no safety study.

[01:12:45] Del Bigtree, Host, The Highwire

The study of the adjuvants. There's never an aluminum study, a thimerosal study, a polysorb 8

[01:12:50] Dr. Paul Thomas, MD, Retired Pediatrician, Author, "The Vaccine Friendly Plan" and "Vax Facts" KidsFirst4ever.com

And they've never studied the whole schedule.

[01:12:52] Del Bigtree, Host, The Highwire

proteins and foreign proteins and kidneys of, like, hamsters and monkeys and aborted babies, like, literally DNA from aborted babies. What does that do in the human body? No idea.

[01:13:03] Dr. Paul Thomas, MD, Retired Pediatrician, Author, "The Vaccine Friendly Plan" and "Vax Facts" KidsFirst4ever.com

Right. So we've watched and I've watched as a pediatrician, busy in the trenches. I went from, you know, kids were pretty healthy 35 years ago to, you know, greater than 53%. I think actually, almost every kid who's vaccinated is harmed. Do you believe that? I truly believe that. You just don't recognize the harm. So, you know, I was.

[01:13:25] Del Bigtree, Host, The Highwire

It could be latent and long term issues and subtle.

[01:13:28] Dr. Paul Thomas, MD, Retired Pediatrician, Author, "The Vaccine Friendly Plan" and "Vax Facts" KidsFirst4ever.com

And chronic things, right, that aren't recognized as connected to vaccines. So that was where my study came in, right. And I actually the medical board was after.

[01:13:36] Del Bigtree, Host, The Highwire

Let's revisit that for anyone that may be watching right now is brand new. Our audience is always growing. Of course, you had a PDA. You know. You know, your clinic had how many patients overall in the end, did you end up treating children?

[01:13:48] Dr. Paul Thomas, MD, Retired Pediatrician, Author, "The Vaccine Friendly Plan" and "Vax Facts" KidsFirst4ever.com

Well, I had 10 to 15,000 active patients, which means they've been seen in the last year. And by the time I had to retire, forced into retirement. I was less than 10,000. That's a long story. You take away someone's license and you lose your insurance contracts. Your population goes down, they.

[01:14:05] Del Bigtree, Host, The Highwire

Go, well, you lost it because you did a study on your 50,000 active patients.

[01:14:09] Dr. Paul Thomas, MD, Retired Pediatrician, Author, "The Vaccine Friendly Plan" and "Vax Facts" KidsFirst4ever.com

Right, right. Well, actually, the study was on every baby born into my practice, so not the whole practice. I wanted a nice, clean sample. You start at birth, and then you look at the difference in all health outcomes, which they never study that the CDC should, but they never do. Look at all health outcomes comparing vaccinated. And in my case they were verily vaccinated not CDC vaccinated okay to completely unvaccinated and see the difference. And we published that study and within days of that study being published a and I see it on your screen, you're seeing the title of that study. Within days, I lost my license. I got a phone call from my attorney, said, Paul, don't go into the office. Don't call any patients, don't write any prescriptions. Your license has been emergency suspended. And I says, why? Says, Well, they had an emergency meeting. And you are a threat to public health.

[01:15:00] Del Bigtree, Host, The Highwire

For doing science, for saying, hey, I just.

[01:15:03] Dr. Paul Thomas, MD, Retired Pediatrician, Author, "The Vaccine Friendly Plan" and "Vax Facts" KidsFirst4ever.com

I see a problem

[01:15:03] Del Bigtree, Host, The Highwire

showing you the data. Right. That's. I have a very large practice. I can show you the kids. I can show you all that data. And it's saying what it's saying, and that makes me dangerous. Right. Here's some of the data just so all of you can see it. I mean, look at this. You've got asthma. Look, the red line is those that are vaccinated, the blue line that are unvaccinated allergic rhinitis. I mean, they're all through the roof. Breathing issues. Adhd. Look at that. I mean, it's almost completely a vaccine injury. Respiratory infections, ear pain, eye disorders, eczema, something that are poor kids. And by the way, eczema. My understanding is eczema used to be considered a vaccine injury. Really? Like if they started getting a rash it would be like don't vaccinate, vaccinate.

[01:15:47] Dr. Paul Thomas, MD, Retired Pediatrician, Author, "The Vaccine Friendly Plan" and "Vax Facts" KidsFirst4ever.com

Yeah. You go back 40 years and 50 years ago. That's absolutely true. We have since been trained. Pediatricians today are trained that eczema has nothing to do with vaccines. And in fact, all these things that I've shown have shown with statistical significance in a very well done peer reviewed study that these are directly related. Right. So we have three major categories of injury. We have the allergic which is your eczema your allergies your asthma. We have neurodevelopment. So language speech um behavior issues autism ADHD. There was no A.D.D. or ADHD in the unvaccinated.

[01:16:24] Del Bigtree, Host, The Highwire

That's amazing.

[01:16:25] Dr. Paul Thomas, MD, Retired Pediatrician, Author, "The Vaccine Friendly Plan" and "Vax Facts" KidsFirst4ever.com

That's amazing. Right? And Del I have to tell you, this is something that a lot of people probably don't know. And I don't know if I've ever told you this. I was at a major autism conference with over 1000 attendants, and there was a panel of experts. This was back in the early 2000. And I asked the question, actually, somebody else asked the question. I just would go, wow. Um, the question was to this panel. And all eight of them went down and said the same thing. The question was, is A.D.D. and ADHD just on the mild end of the autism spectrum, and every single one of them said yes.

[01:16:56] Del Bigtree, Host, The Highwire

Amazing.

[01:16:57] Dr. Paul Thomas, MD, Retired Pediatrician, Author, "The Vaccine Friendly Plan" and "Vax Facts" KidsFirst4ever.com

So when you know now that in the United States, ADHD is probably 1 in 6, 1 in 10. 1 in 8. Somewhere in there. Wow. And that's the mild end. It's basically we're doing something to our children that is messing with their brains, and how badly it messes with their brains and exactly where it messes with that, whether it's actual toxic effect, whether it's immune activation, whether it's just massive inflammation. And we now have documented so many mechanisms of how this happens and why it happens. It's just a matter of degree. We are destroying our children's brains and their future and vaccines. A big part of it. But the third category that was very clear in my data is infections. So we had increased ear infections, lung infections, sinus infections, eye infections, skin infections, GI infections, infections of all kinds combined about 400% 3 to 400% or more.

[01:17:51] Del Bigtree, Host, The Highwire

Times the rate of overall just.

[01:17:54] Dr. Paul Thomas, MD, Retired Pediatrician, Author, "The Vaccine Friendly Plan" and "Vax Facts" KidsFirst4ever.com

In the vaccinated. And these weren't even CDC vaccinated. These are.

[01:17:57] Del Bigtree, Host, The Highwire

Lightly vaccinated,

[01:17:58] Dr. Paul Thomas, MD, Retired Pediatrician, Author, "The Vaccine Friendly Plan" and "Vax Facts" KidsFirst4ever.com

Lightly vaccinated compared to unvaccinated nose.

[01:18:00] Del Bigtree, Host, The Highwire

If they had all all the vaccines or.

[01:18:02] Dr. Paul Thomas, MD, Retired Pediatrician, Author, “The Vaccine Friendly Plan” and “Vax Facts”
KidsFirst4ever.com

Oh yeah.

[01:18:02] Del Bigtree, Host, The Highwire
Just.

[01:18:03] Dr. Paul Thomas, MD, Retired Pediatrician, Author, “The Vaccine Friendly Plan” and “Vax Facts”
KidsFirst4ever.com

So this.

[01:18:05] Del Bigtree, Host, The Highwire

By the way, I just want to say, you know, I sit here and sometimes I think, well, people get it and I, and I then I remind myself at home they're dealing with their kids allergies. They're dealing with their kids asthma. They know their kid is sick, is all get out. And they're wondering why. So it's not like, well, who's this happy to do? I've never heard of such a thing. **Everyone is sick. Their kids are all sick.**

[01:18:27] Dr. Paul Thomas, MD, Retired Pediatrician, Author, “The Vaccine Friendly Plan” and “Vax Facts”
KidsFirst4ever.com

They're sick. But they're being told by their pediatrician it's not the vaccines. Right. And I do think pediatricians, you know, your statement that they're just horrible, right? They're actually good people. Yeah. They went into pediatrics because they love children, but they are in a system that is keeping them blind. They are fed garbage, non-science, as if it was science. And they are shielded from the truth. The stuff that we are exposed.

[01:18:51] Del Bigtree, Host, The Highwire

What does it say? The road to hell is paved with good intentions. I think it's led by good soldiers. And that's unfortunately, what I think pediatricians are turning into.

[01:18:59] Dr. Paul Thomas, MD, Retired Pediatrician, Author, “The Vaccine Friendly Plan” and “Vax Facts”
KidsFirst4ever.com

Absolutely. But what the AAP has done now that we're talking about here, I mean, just in the last week or month, they've come out with a press release that they don't think anybody should get any exemptions in any state. Right. So in other words, we are all in on mandates.

[01:19:18] Del Bigtree, Host, The Highwire

Yeah. **That's authoritarian control of the vaccine program.**

[01:19:21] Dr. Paul Thomas, MD, Retired Pediatrician, Author, “The Vaccine Friendly Plan” and “Vax Facts”
KidsFirst4ever.com

So no parental rights, no rights to children. We're just going to slap.

[01:19:25] Del Bigtree, Host, The Highwire

Government owns you. You have no I mean, essentially you are owned by the government, right? The your government's, you know, children, not yours. They you get overruled. I mean, it's just a horrifying thought.

[01:19:35] Dr. Paul Thomas, MD, Retired Pediatrician, Author, “The Vaccine Friendly Plan” and “Vax Facts”
KidsFirst4ever.com

That the AAP would back that. I'm sorry. Pediatrician. You got to walk away from this organization, right?

[01:19:40] Del Bigtree, Host, The Highwire

I mean, **instead of investing in a beautiful, colorful book explaining how all the science is done, how the immune system works, why vaccines are effective. All the great studies we've done. Links to those studies so people can read them themselves.** Exactly. But **that's what should have been done, right?** That's why you're paying for a membership is. Will you please sell? What a great thing it is we're doing instead of just bringing in an authoritarian control and saying. Because we will it. Alright, look, I want to get to the fact that you have always been focusing on vaccines, and now you're taking another step. You have decided that instead of, you know, you know, proving through studies which you've done, that vaccines are making children sicker. You are now suing the CDC for the vaccine program. I get that right.

[01:20:22] Dr. Paul Thomas, MD, Retired Pediatrician, Author, “The Vaccine Friendly Plan” and “Vax Facts”
KidsFirst4ever.com

That's right.

[01:20:22] Del Bigtree, Host, The Highwire

You are suing the CDC for the entire vaccine program.

[01:20:26] Dr. Paul Thomas, MD, Retired Pediatrician, Author, "The Vaccine Friendly Plan" and "Vax Facts" KidsFirst4ever.com

Right. So you know this, but a lot of viewers may not. The CDC vaccine schedule itself has never been tested for safety, and they're supposed to. You just finished talking about how every two years is supposed to report on this. They've never done it. So they took Covid off of schedule A right where it's mandated. And now when you remove it from mandates, first of all liability goes back. Yep.

[01:20:51] Del Bigtree, Host, The Highwire

So if it wasn't covered by Prep which Covid has a little bit, it has that.

[01:20:55] Dr. Paul Thomas, MD, Retired Pediatrician, Author, "The Vaccine Friendly Plan" and "Vax Facts" KidsFirst4ever.com

Back issue.

[01:20:56] Del Bigtree, Host, The Highwire

That backup issue. Okay. But all the other vaccines that would be the case.

[01:20:59] Dr. Paul Thomas, MD, Retired Pediatrician, Author, "The Vaccine Friendly Plan" and "Vax Facts" KidsFirst4ever.com

Okay. So the lawsuit our goal with this lawsuit is I'm not seeking any money. This isn't about me. This is to protect our kids. So the goal is to one educate the public, but more importantly, to put legal pressure on the CDC to do the right thing, to force them to take all the childhood vaccines because none of them have been properly tested for safety. Off of schedule A? Yeah, that's just the first step. I mean, this isn't the lawsuit to solve all problems, right? But imagine if we got all vaccines off of schedule A, right? No more mandates.

[01:21:29] Del Bigtree, Host, The Highwire

Yeah.

[01:21:30] Dr. Paul Thomas, MD, Retired Pediatrician, Author, "The Vaccine Friendly Plan" and "Vax Facts" KidsFirst4ever.com

End of that problem.

[01:21:31] Del Bigtree, Host, The Highwire

Yeah.

[01:21:32] Dr. Paul Thomas, MD, Retired Pediatrician, Author, "The Vaccine Friendly Plan" and "Vax Facts" KidsFirst4ever.com

We already know that. More and more parents aren't going to accept them anyway. Yeah. So I don't know what's going to happen to our society if they don't do that anyway. I don't know what's going to happen if our schools don't change their requirement for our mandates. Nobody's going to go to school.

[01:21:46] Del Bigtree, Host, The Highwire

You know what's amazing about this? And I've thought about it. It's though the AAP and those in government that have been shills for the pharmaceutical industry as though parents, you know, want to have to go to the doctor and give them 72. And I guess now it's 100 vaccines and you're going to take away that, that that visit where you inject my child, they scream bloody murder. They don't want to be there. It's the worst day of my life. Wait a minute. There's going to be fewer of those. I'm protesting. There's got to be no protest on. This is the point, right? Nobody wants this stuff. No one's going to complain about a shorter vaccine schedule or one that I don't have to do.

[01:22:22] Dr. Paul Thomas, MD, Retired Pediatrician, Author, "The Vaccine Friendly Plan" and "Vax Facts" KidsFirst4ever.com

Well, the thing is, though, we're not telling you you can't get them right. You're. We're just saying you can't be forced to get them.

[01:22:28] Del Bigtree, Host, The Highwire

Yes.

[01:22:28] Dr. Paul Thomas, MD, Retired Pediatrician, Author, “The Vaccine Friendly Plan” and “Vax Facts” KidsFirst4ever.com

So that's how it should be anyway. My whole career has been about informed consent. It has to be the parent's choice. And I watched over my career how fewer and fewer parents wanted to do the vaccines once they had the information. Yeah. I want to get to the point where fewer and fewer Pediatricians will even carry the vaccines because they realize, oh, these are harmful products for every single vaccine. I'm going to say something controversial. I've said it a lot lately. For every single vaccine on the childhood schedule, you are more likely to die from the vaccine than you are from the disease that you're trying to protect. That's just a little piece of the puzzle. When you look at the chronic diseases that are produced by these vaccines and statistically proven studies, my own being a big one, but mine was retracted so nobody can quote it. Yeah, it wasn't retracted because the data wasn't accurate. It was retracted on a silly technical technicality that was actually bogus. But there are other studies showing the same thing. Yeah.

[01:23:24] Del Bigtree, Host, The Highwire

Everyone I've looked at, essentially shows the same thing. And I've said this too. I've said this to a New York Times reporter just last week. I said, let's be clear. They've done the vaccinated versus unvaccinated study inside the CDC. You know that they've done it. And you know what? She she made the point. She said, well, but you do have to admit it's difficult because of confounding issues, right. The confounding issues thing. And I said to her, all right, I'm going to meet you right there. Yes, I recognize those confounding issues. And for people out there, let me explain this to you. And this is what I said. I said, let me admit, because I don't vaccinate my child, I'm never going to tell you. By the way, I'm not telling you in the audience what to do. I'm just being honest. My kids don't get vaccines. They also never drink tap water. There are no Doritos in our house. There is no Coca-Cola. There's no soda of any kind. We don't have processed sugars, any sort of processed foods. We eat organic vegetables. We're lucky we can afford that. You know, I hope everybody I would love to see programs by the government that actually, you know, give you, you know, stamps to get organic food instead of things like that. But the point being, I admitted to this New York Times reporter, I admit that all of those things. And by the way, none of my kids ever walked through an airport scanner, ever.

[01:24:38] Del Bigtree, Host, The Highwire

I will get patted down. I'll get the free massage. I am not going to microwave me in my family. So many, many things we're doing are different than everyone else. So yes, it would be hard to control. Is it the airport scan or is it the non fluoridated water or is it all the other things that the FDA, by the way, has said is safe, that is making your kids healthier? And I said, but here's the point. The only reason, Paul, they know there's confounding issues that make this difficult to study is because they've done this study. They've looked, they've looked, they've looked and said, oh my God. No matter how we try to control in this study, the vaccinated or I mean, the vaccinated are clearly sicker than the unvaccinated. And this is what I said to this reporter. So here's what sucks. Here's what sucks. You keep reporting in your newspapers and all the news keeps reporting those dirty, you know, dangerous, sickly, unvaccinated kids. And I just I know, you know, deep down by what I just said, that the unvaccinated are healthier. Now, you may try to put in all the other categories of the things that we do, but here's the fact. You just want to poison our kids because you want it to be fair. You want them to be as sick as all the other kids so that you could even this playing field. That's where we're at.

[01:25:48] Dr. Paul Thomas, MD, Retired Pediatrician, Author, “The Vaccine Friendly Plan” and “Vax Facts” KidsFirst4ever.com

Yeah, that's one take on it. I mean, uh, you lost me on that one.

[01:25:56] Del Bigtree, Host, The Highwire

Way down the road. Well, here's the point. They've done that study because.

[01:26:00] Dr. Paul Thomas, MD, Retired Pediatrician, Author, “The Vaccine Friendly Plan” and “Vax Facts” KidsFirst4ever.com

They know.

[01:26:01] Del Bigtree, Host, The Highwire

If they've done the study. And it proved that just very easily. We just compared all of our vaccinated kids in our database to all of our unvaccinated kids. And the vaccine have less cancer. They have less Add ADHD, they have less autism. They have less cancer, less lupus, they have less, you know, asthma, they have less, you know, infections, they get less infections. If they could say that, they would have. And by the way, Robert Kennedy Jr would not be HHS secretary today if they'd ever been able to show us that study. And I would not have this show with millions of people watching, if they could show us a study that showed the vaccinated are healthier than the unvaccinated. But they can't.

[01:26:34] Dr. Paul Thomas, MD, Retired Pediatrician, Author, “The Vaccine Friendly Plan” and “Vax Facts” KidsFirst4ever.com

They can't because they aren't. They aren't. And we've shown it in our study, and several others have done the same. And it's time for the CDC to step up to the plate. And until that happens, no mandates. Let's move all the vaccines to schedule B at least. So it's a decision that parents can make. I actually don't like the wording of what is it, joint custody. No.

[01:26:55] Del Bigtree, Host, The Highwire

For the joint decision making.

[01:26:56] Dr. Paul Thomas, MD, Retired Pediatrician, Author, “The Vaccine Friendly Plan” and “Vax Facts” KidsFirst4ever.com

Joint decision making. It's better than mandates.

[01:26:59] Del Bigtree, Host, The Highwire

Right. But joint decision making between you and your doctor that's trained by the pharmaceutical.

[01:27:03] Dr. Paul Thomas, MD, Retired Pediatrician, Author, “The Vaccine Friendly Plan” and “Vax Facts” KidsFirst4ever.com

The problem with it. So I have a son who has a young child, and his wife really wants vaccines. So if she were to go into the office with my grandson, yeah, they're going to get a vaccine because the joint decision making is with a pediatrician who drank the Kool-Aid, who doesn't understand what we're talking about. So pediatricians need to wake up. You need to fire your affiliation, sever it completely with the AAP. They need they need to become a non-factor in pediatrics, or we are losing the profession. I'm afraid it might be too late. I really I really feel that. I mean, because.

[01:27:38] Del Bigtree, Host, The Highwire

I think you're right. Well, because just like you, any, you know, unless they do it in mass, call each other, we are protesting all together, and they're going to have to pull the license of tens of thousands of us all at one time because it's, you know, it's like you go out on your own, you, you write books about truth, you do studies, and you end up putting it all in line. I'm glad you did. I love this. I you know, I don't know if this lawsuit can win. I'll have to have Aaron look at it, but I love the idea of it because it starts the conversation when somebody is suing the entire vaccine program because it's never been tested. It hasn't been tested, has it? And it should be illegal. And I hope you win this. And we are certainly going to bring all the attention to this, because it is time that untested products are no longer mandated into our children. It's just parents. Those days are over. I agree. Thank you so much for your incredible work sticking around throughout the record. We'll get into some personal conversations right after the show. If you don't have this book or you have a friend that really needs to understand what's happening here. They're starting to falter. They're starting to question. This is the book they should be reading.

[01:28:40] Del Bigtree, Host, The Highwire

Vax Facts. Doctor Paul Thomas was on a long journey early on. He had. Well, here's some vaccines are good in his original book. Now he's saying, let me talk about all of them. And let me just tell you what you just heard right here. And by the way, written by the guy suing the CDC over the entire vaccine program. Uh, this is how you make a difference. Everybody's got to do what they're guided to do. When people come up to me and they say, you know, I don't know what I'm supposed to do in this. Doctor Paul Thomas put his entire career on the line because he was going to do that. I left television and CBS to start the show, to hire Aaron Siri to come to you and say, could you please help us fund lawsuits? We can make a difference. We can change this conversation forever. We have. And one of the ways that you can help, if you just want to do one thing today, why don't you buy a brick? It actually affects. As I'm walking here to the studio, this changes my life. Sometimes I'm having a bad day. Sometimes having a good day, sometimes a little mantra. In fact, I was just walking this morning. Take a look at this. It's awesome about this. Walkways.

[01:29:39] Del Bigtree, Host, The Highwire

Every time I'm walking to the office or I'm going to the studio. You know, you look down sometimes you need inspiration. Like on bad days. This one's popped out to me several times. I love this one. Keep up the good work. Truth will prevail. The Mazzarelli clan. It's just moments like that where you're walking and going. You know what? This is all going to work out. We are winning. Even on a cloudy day, that statement brings a lot of light. So many statements like this, we're going to keep featuring them as we go along throughout the weeks. I'm so excited for this terrace right behind me to be finished and have all these beautiful bricks, some beautiful benches that are available and plaques. But you can get a brick. You should take that opportunity to be a part of this foundational moment, this place that will be here throughout time. This is just a part of being a part of our home where we do this work every single day for you.

[01:30:33] Del Bigtree, Host, The Highwire

Well, I hope you take the opportunity to just lay a brick in the foundation of all the work that we do here. I'm so proud of my team that works. You just can't imagine how hard they work every week to dial this show in. We look at so many news stories from around the world starting on Monday. Then on Tuesday we start playing devil's advocate. Is it possible that's not true? Try to find some other science. Just try to disprove it. We work so hard as to what we deliver here on Thursday. You can take it to the bank that you can say, you know what? The Highwire is always accurate and we have a heck of a track record. I also want to let you know that one of the things that we do is we have the informant for everybody that's a member. It's a magazine that we send out to you with all of the breaking stories, some of which never even end up on this show. If you want curated news, we've got writers that are bringing all this. And for a lot of you, you like reading it, really seeing it, reading through it, instead of just seeing the videos. That's a great way to go. And of course, every single thing we talk about here, whether it's a news piece or a breaking, you know, a peer reviewed study or a breaking story and you're like, oh, wait, what was the name of that study? I'm going to have my uncle over who's a pediatrician.

[01:31:44] Del Bigtree, Host, The Highwire

I want to have this debate at the table. Will we put that right in your hands? Unlike the CDC or anyone else, any other MSNBC or news agency, we don't just hide the information. We give you our data. We show you our math. Just go down the page, type in your email and just subscribe. It's just that easy. We don't share that email with anybody. And then you get a breakdown on Monday after Thursday's show. Every single clip. Oh, you know, my favorite part was I want that Paul Thomas interview. It was amazing. I know exactly a person that should have. It's already cut for you. It's right there. Clickable, a shareable link. Oh, I want that study. There it is. There's a study. I can print it out. I can share it with a friend. This is one of the things we do for free. You don't even have to be one of our sponsors. All you have to do is just put your email in there and become a part of this community. We have work to do. And the biggest part of this, if you you know, one of the things that I would say is when I left CBS and I got involved with the Highwire, once I traveled with VAXXED, what we recognize is media is everything, right? Information is everything. And so what we decided to do is instead of just, talking about the issue or having conferences about it, let's get it out on television sets.

[01:32:56] Del Bigtree, Host, The Highwire

Let's get it into computers, let's get it onto cell phones across the world. Let's tell the truth and start sharing the truth. Look how far we've come. I mean, seriously, back when I started with VAXXED in 2016, we were kicked out of a film festival for talking about a whistleblower inside the CDC on the vaccine program. And now the head, the literally the guy in charge over the CDC is one of our own, Robert Kennedy Jr. That happened in just, what, eight, nine short years? That was possible. Can you imagine what we could do next? Do you know how much ground we could make right now? If we all work together, if you share this show, if you share this information, if you let your friends know you can't trust the AAP anymore. Look at this. They're farmers. They're pushing it back. Seeing, you know, is dangerous. What else are they pushing? Please look at this again. I really want all of you to be inspired to recognize that this is your story. This isn't just Del Bigtree's issue. This isn't just an issue that affects everyone in California and Illinois right now that are loading up their cars and heading for Texas. I got to go paint my house real quick. But you know, this is about us. This is about this moment. This is about this generation. This is about this world.

[01:34:18] Del Bigtree, Host, The Highwire

This is the tip of the spear of the entire WEF takeover that has been underway now. Been watching for a few years now. You got Fink moving in there, from Blackrock. So now the biggest financial interests in the world are going to try and regroup with the WEF and figure out how to break America, to break and turn us into a giant global melting pot of terrible ideas and authoritarianism. But at the heart of it, at the heart of every attempt to take over so far, and I guarantee you, the ones in the future, what do they keep talking about? Health. They keep talking about you'll need to vaccinate. They keep talking about pandemics while they make the diseases that are coming out of their laboratories that keep putting us in harm's way. This must be stopped. And we are suing like crazy. We are in courtrooms like crazy. You know, with legislation that's out there. We've got to help Robert Kennedy Jr. We've got to be a movement. Now, whether you want to be the Maha movement or the medical freedom movement or the vaccine risk awareness movement, or just plain anti-vaxxers. This is our time. This is our moment. We've got to stand our ground, and we've got to enroll everyone we can in this mission. Because this war is not over. This time, this moment is ours if we seize it. Carpe diem. Seize the day. Seize tomorrow. And I'll see you next week on the Highwire.
