

## NAME

EP 481 6/18/26.mp4

## DATE

June 19, 2026

## DURATION

1h 38m 8s

## 18 SPEAKERS

Del Bigtree

NARRATOR VO

Brian Hooker

Female Speaker

Jefferey Jaxen, Investigative Journalist, The Jaxen Report

Female News Correspondent

Ron Johnson, (R) United States Senator from Wisconsin

Male News Correspondent

Tulsi Gabbard, U.S. Director of National Intelligence

Jen Psaki, Former White House Press Secretary during the Biden Administration

Justyna Socha, Social Activist, Journalist &amp; President of "STOP NOW"

Roman Fritz, Polish Politician, Member of the 10th Term Sejm

Dorota Sienkiewicz, Pediatrician &amp; Rehabilitation Specialist

Arkadiusz Tetla, Attorney at Law, Kancelaria Adwokacka

Piotr Witczak, PHD, Polish Biologist

Adam Niezgodna, MD, Neurologist, Professor

Crowd of People

Kelly Gallagher, 5x Cancer Survivor

## START OF TRANSCRIPT

**[00:00:05] Del Bigtree**

Have you noticed that this show doesn't have any commercials? I'm not selling you diapers or vitamins or smoothies or gasoline. That's because I don't want any corporate sponsors telling me what I can investigate or what I can say. Instead, you are our sponsors. This is a production by our nonprofit, the Informed Consent Action Network. So if you want more investigations, if you want landmark legal wins, if you want hard hitting news, if you want the truth. Go to ICANdecide.org and donate now. Alright everyone, we ready?

**[00:00:44] NARRATOR VO**

Yeah. Let's do this.

**[00:00:46] Del Bigtree**

Action. Good morning, good afternoon, good evening. Wherever you are out there in the world, it's time for us all to step out onto the Highwire. Well, I am finally just getting re-acclimated to the United States of America. Got my sleep schedule just about back on track. Had, I think, maybe one full night's sleep genuinely last night, and I am now bracing myself to prepare for another journey to Japan, where I will be premiering An Inconvenient Study and be on several panels. June 20th and 21st is the event. Go to zero spike.com to check that out. I want to thank Zero Spike for sponsoring An Inconvenient Study in Japan. We had a great trip with them in Italy, so I'm really looking forward to that. Uh, but today we're going to celebrate my journey in Poland. A little bit later into the show, I'm going to go through some of the very important interviews that I did there. You'll see similarities, but also things that are very unique to Poland. One of them. Is it possible that there's a nation that has even more rebellion in their blood than the United States of America? I'm going to get into that. But first, just for a taste of our trip to Poland, take a look at this.

**[00:02:19] Del Bigtree**

We're here in the first day in Poland, where we're going to be giving testimony in the parliament. We're here trying to check in, giving my passport. Brian Hooker gave his passport. For some reason, we're the only two people that have not been approved right now. Mission accomplished. Essentially, every government of the world agreed to measures that had no basis in science.

**[00:02:45] Brian Hooker**

When there is a risk in any type of medical intervention, there must be a choice.

**[00:02:52] Del Bigtree**

I believe this is the most important issue in the world.

**[00:03:04] Del Bigtree**

So you're really one of the lead voices of the medical freedom movement here in Poland.

**[00:03:09] Female Speaker**

So not trusting the government is in our blood and fighting for freedom as well.

**[00:03:14] Del Bigtree**

It's been a long day. I got two hours sleep last night, totally jet lagged. But we had an incredible hearing, just did some amazing interviews. And now as soon as they can get that wrapped up, we're racing over to where they're screening An Inconvenient Study. We must reject this global use of health against our freedom. The people that stood their ground were fierce, and, some will say, was one of the most controversial films in the world.

**[00:03:55] Del Bigtree**

If not now, then when? If not us, then who?

**[00:04:03] Del Bigtree**

Our children need us now. You have the power.

**[00:04:08] Del Bigtree**

Use it.

**[00:04:10] Del Bigtree**

So the speech I gave was in front of the presidential palace. And actually the president, when he was running for that position, ran on. I'm going to end vaccine mandates. Uh, apparently there's been no movement on that whatsoever. They still have a pretty serious vaccine mandate law going on there. So there's a lot of people upset about that. But I'll get into those issues and discussing that later on the show. First, it's time for the Jaxen report. Alright. Jefferey what we got going this week.

**[00:04:50] Jefferey Jaxen, Investigative Journalist, The Jaxen Report**

Oh it's a packed week. A lot being uncovered this week. I sometimes don't even know where to start, so I think we'll start with our friend, Senator Ron Johnson. Um, if anybody's in politics out there or wants to get into politics and wants to understand how to really confront or talk to the corporate media, take a page out of this Ron Johnson clip. Look at.

**[00:05:12] Female News Correspondent**

Senator Johnson. Can we get you on the Covid cover up? Why do you think legacy media such as CNN is not covering this?

**[00:05:19] Ron Johnson, (R) United States Senator from Wisconsin**

Why aren't you covering that?

**[00:05:20] Male News Correspondent**

I want to ask you about Iran, the war on Iran.

**[00:05:22] Ron Johnson, (R) United States Senator from Wisconsin**

You know, you really ought to cover the fact that Peter Marks knew on March 1st of 2021 that their algorithms were hiding safety signals on 26 Days Later found out 25 serious adverse events like sudden cardiac death, pulmonary infarction, Bell's palsy, different types of strokes. And they buried it. They hid it. It's a major scandal. It's even as big a scandal. The major media is completely ignoring the story. It's been out now for almost six weeks.

**[00:05:54] Male News Correspondent**

I'm sure that was a question. Trying to ambush me, but.

**[00:05:59] Ron Johnson, (R) United States Senator from Wisconsin**

Me Ambush you? Alright?

**[00:06:03] Del Bigtree**

Turning the table just a little bit there, I love it. That's awesome.

**[00:06:07] Jefferey Jaxen, Investigative Journalist, The Jaxen Report**

Yeah. And you can see the CNN journalist reflexively, as they always do, just plays the victim. Amelia, I can't believe you're ambushing me and making me cover one of the biggest stories of the century here of our government covering up vaccine injury. But I want to talk about Iran. Yeah.

**[00:06:21] Del Bigtree**

So amazing.

**[00:06:22] Jefferey Jaxen, Investigative Journalist, The Jaxen Report**

That's that's Ron Johnson. Um, but really the conversation as we've been reporting is just it's just starting to snowball. This is Axios. And for once, I think they got the headline right, "the fight over America's vaccine future." And that is exactly what's happening right now. And then it goes on to say, as it typically does, "despite the setbacks in court, public health experts say the administration's moves are already having a lasting effect on the public that became more skeptical of vaccines during the pandemic. School immunizations exemptions are up. The vaccine skeptics" I don't know about that "are trying to carve out more accommodations on religious grounds. Red state legislators continue to try to do away with vaccine mandates with mixed success." So obviously they're sprinkling politics in there, throwing out some names, vaccine skeptics, but you know, they're missing the boat on this. Clearly, this is a lot of the country is thinking like this now, and the fight is on. And we can't talk about vaccines and vaccine safety without talking about SIDs, sudden infant death syndrome. And that's kind of what they just gave it to children. Infants are dying and they don't know what it is. Well, it's called a syndrome. And we have some really independent researchers doing great work here. This is Neil Miller. This is his study. This came out in 2021.

**[00:07:30] Jefferey Jaxen, Investigative Journalist, The Jaxen Report**

"Vaccines and sudden infant death." They analyze or he analyzed the Vaers database from 1990 to 2019 and all the medical literature. And they really found a lot of things. One of them was infant deaths post-vaccination are often classified as SIDs or suffocation in bed, so they're not getting classified correctly. Really screwing up the tally for us to do the research well. For some reason, that study was retracted just recently. And it's interesting, you know, years after it was published, it suddenly retracted. But the interesting thing about this is we have HHS Secretary Kennedy swooping in and posting this this week. He says this. "I sent a letter to the editor in chief of toxicology reports demanding a full explanation for the removal of a published article examining vaccines and sudden infant death. Americans have a right to know why scientific papers are removed, who made these decisions, what evidence supported them, and whether the same standards are applied consistently." This is how the federal government should be acting to scientific gatekeepers. This is a major move, a shift, a paradigm shift. And I really hope this administration keeps doing this because not only vaccines, you have oncology industry, you have pretty much every gatekept industry. Science treats them like this and their researchers. So this was a huge move.

**[00:08:46] Del Bigtree**

Yeah, I love it. I mean, this is what, you know, a lot of people say this is what I voted for. This is what we voted for transparency in government. And can we stop all of the, you know, sort of corporate capture and corruption that is driving science in this country? Fantastic.

**[00:09:01] Jefferey Jaxen, Investigative Journalist, The Jaxen Report**

Exactly. Exactly. And again, the fight, like Axios said, the fight for the future of vaccination debate, really who's going to own this thing is happening. And the headlines show this. So with that headline with Kennedy, with that move, now we have, um, a US government contractors bidding the CDC using taxpayer money to buy what? Well, let's look at this first one here. These are adult Covid vaccines to the tune of over \$500,000,505 million. Um, they're buying the updated versions of the Covid vaccine that were just that was just greenlit because of near unanimous FDA vote. But then we have the, the pediatric vaccines for kids, infants, children. They're spending more. They're spending more than the adult vaccines, 735 plus million dollars. Why are they doing this? I thought we were supposed to have a decision making. I thought these vaccines were supposed to have the brakes pumped on them. We're going to investigate them a little more. I know there was deaths that Vinay Prasad when he was in reported in children. They found some various signals that there was they were killing some children. Well, we have a legal update that we pushed to understand this decision. We want to know why this happened. This is not supposed to happen. Why did this happen? And our lawyers put a legal update to the CDC, NIH, Jay Bhattacharya, to ask why? Why did this happen? The public wants to know. So this is Informed Consent Action Network taking it to the administration when things like this happen.

**[00:10:30] Jefferey Jaxen, Investigative Journalist, The Jaxen Report**

But I want to go back to Kennedy for a second, because we're supposed to have an ACip committee coming up at the end of this month in June, June 24th. And right now, a judge has stopped that, even though there's an executive order by Trump saying these are the decisions that have to be aligned with other countries, European countries with the vaccine conversation, the schedule. But that ACip committee is in limbo. So this is Kennedy again. He takes two ex post this "today we filed a motion asking the First Circuit to expedite our appeal of the district court's order. In a lawsuit that left ACip, the nation's vaccine advisory committee, without a quorum, the court's order has left ACip unable to carry out its core responsibilities. As a result, the committee cannot issue new recommendations, review newly approved vaccines or complete important work ahead of the fall flu season. Families, physicians and insurers, and public health programs deserve certainty, not paralysis." So ironically, the American Academy of Pediatrics, who cares about the vaccine program, has essentially paralyzed it, allowed it to make no progress whatsoever. They're actually hindering vaccination schedules in America in just an ironic twist there. Uh, and so that's up in the air right now. We don't know where this is going to go. Um, it's uncertain if that ACip committee is actually going to happen is on the CDC calendar. But no word on that to date.

**[00:11:49] Del Bigtree**

Wow. I'm in such a strange thing to have a judge overriding a federal regulatory agency. And as I think Bobby rightly points out, what happens if there was a biological attack this week or, you know, anything like that, how how is our government supposed to respond if judges can just come in and say, you're not allowed to have a conversation inside government agencies? Just a really bizarre thing. And we've reported extensively on this. It's amazing. You know, there's no we can't seem to find standing in this case, how is the American Academy of Pediatrics even? How are they allowed to even bring this case? What is the damage to them? But, you know, this is this is the world we live in. I know for a fact Bobby wasn't expecting it to be easy. Um, when it's all said and done, I'm sure we'll get a good book from him on. Was it harder than he thought?

**[00:12:40] Jefferey Jaxen, Investigative Journalist, The Jaxen Report**

Yeah. Now, this has been a packed week of, uh, of news. We had our friend Bill gates. He was drug up in front of the congressional committee behind closed doors to testify on his ties to Jeffrey Epstein. Bill gates testifies about his ties to Jeffrey Epstein. That's AP news. Um, and there's another headline out of New York Post. Bill gates tells Congress, Jeffrey Epstein use his affairs to leverage to as leverage to keep billionaire close. Well, it sure seemed like that leverage acted and looked a lot like a business dealings that he benefited from. Um, but there's another kind of, uh, we're gonna, we're gonna go over some documents. There's a lot of documents that came out and that were outed this week. These are, this is an investigation from Real Clear Politics "viral influencer, how Bill Gates billions shaped us medical research," real clear investigation. Sorry. Remember Bill and Melinda Gates Foundation? It was supposed to be a philanthropic. It's a nonprofit. We're here to help people. We're not here to make money. We're here to save the world and save children and give vaccines and stop infectious disease. Well, not according to this investigation. Before the pandemic, The Nation magazine reported that the Gates Foundation had a \$40 million stake in CureVac. This was not a grant, but an investment. "Curevac was one of many companies the nonprofit bought stock in that were working on Covid vaccines and therapeutics. Around the same period, the Gates Foundation announced that it had begun to leverage a portion of its 2.5 billion strategic investment fund to advance the nonprofit's Covid work. The Gates Foundation also turned a \$55 million investment into Pfizer's Covid vaccine partner, BioNTech, into over 550 million when it sold stock a couple of years later after the vaccine hit the market." Okay, that's nonprofits, I guess.

**[00:14:24] Del Bigtree**

Slight conflict of interest there, it seems. And you're right. I mean, it's a nonprofit that clearly makes a lot of profit. I mean, ten times the amount it invested coming back to it. It's amazing.

**[00:14:35] Jefferey Jaxen, Investigative Journalist, The Jaxen Report**

Yeah. And and and Bill Gates make headlines. Makes the headlines this week saying, uh, Jeffrey Epstein leveraged my, my affairs, his knowledge of my affairs and really just kept me under his thumb. Well, I want to I want to really illuminate the, the pandemic industrial complex that we're looking at here. And Bill Gates is really at the forefront of this because you see, he's betting on vaccine technology, but he was also preparing the space before the Covid pandemic happened for over a decade before that. Um, and this is one of the articles here that really lays it out. The Epstein files illuminate a "20 year architecture behind pandemics as a business model, with Bill Gates at the center of the network." And so again, he's complaining he was leveraged by Epstein. But look at this. Here's some emails that were uncovered. He's talking to Jeff Staley. He's a head investment banker at JP Morgan at the time. And this is to Jeffrey Epstein. Hey. "Hi, Jeffrey. Jess asked me to pass along these questions from the JP Morgan team that is putting together some ideas for Gates. If there's any, if there's any you can answer, it would help to narrow down the options for providing recommendations." So they're putting together a fund for basically a pandemic health fund for Bill gates. And they didn't go to Bill Gates. They went to Jeffrey Epstein. Jp Morgan did to ask how to set this up. Okay. Well, here and finally, we have the rollout of this fund, JP Morgan launch of the Global Health Investment Fund.

**[00:16:03] Jefferey Jaxen, Investigative Journalist, The Jaxen Report**

And you can see here Bill Gates is the guest of honor. And you can see Jamie Dimon there, the head of JP Morgan, and then the heads of GSK, Merck, Pfizer. They were all there to get their money on this. And that was preparing this pandemic architecture before Covid even hit that they made money on, as you just saw, that Gates made money on betting on the stocks and really steering the public health response to this so he could make that money and his organization could make that money. And even in 2014, you saw him leveraging the white House With this fund, because this fund that was in 2013 and you see him starting. Here's another internal email. He says, "next week, I start Monday in Washington, D.C., mostly seeing executive branch people, including the president on the budget and Ebola." Um, so he's talking about the Daff fund. So he can say, I can easily talk about the Daff approach at the dinner. So this is this this health fund. He's he's promoting, he's talking to the president about it. He's talking about it with the Ebola fund. And so that that's Bill gates, that's Jeffrey Epstein. That's that's the leverage that I guess he didn't really want to do. But it sure seemed like he was working it pretty well and making a lot of money from this at every stage of, of this conversation.

**[00:17:12] Del Bigtree**

Well, I mean, look, it's the question I asked all through Covid is Bill Gates all the way up on top? Is he working for someone even bigger than him? But nobody had the vision that he had to essentially take your money. You're being accused of running a monopoly, say, oh, no, okay, you got me. I'll just defer all that funding into NGOs, nonprofits, and then goes to be the number one provider of financing to WHO when the America when America steps out. So number two, there starts Gavi. You know, all of these things invest in vaccines, invest in testing, uh, I think, and essentially invested in health. And then all of a sudden we found ourselves in Covid health being used as an authoritarian weapon on the entire world. And who was there? Bill gates, I mean, pretty visionary, uh, when you look at it. And then to think, you know, characters like Jeffrey Epstein and bankers like JP Morgan Chase are all inside of this cabal. I'm still, as I travel the country, I am trying to unpack what really happened there. It's, you know, we see a lot of these pieces, but really, Jeff, it's still hard to connect all the dots.

**[00:18:25] Jefferey Jaxen, Investigative Journalist, The Jaxen Report**

Yeah, this is a global crime scene we're looking at at this point. So yeah, absolutely. And there's more information that just came out. This is Rand Paul. He's making headlines also this week with more pieces of the puzzle. This was what he released just recently. "Rand Paul released his timeline of Doctor Fauci's extensive contracts with the US intelligence community." So here's the other angle. And let's just go right to this document he released, he put out. And this is all backed up by data and actual internal emails. And it shows here from 2003 to 2020, it says Fauci's ties to the intelligence community predated Covid by nearly two decades. So Fauci was embedded in the intelligence community. And why is that important? Well, we go from to 2020. This is a lot of stuff we reported on with the internal emails. Doctor Fauci helped steer the early Covid 19 origins debate through NIH, NIAID funded experts. We had all those emails saying the origins paper, calling them up immediately, saying we have to have a talk, we have to talk about how we're going to construct this paper. But then in 2021, Fauci circles back around to complete the circle. Fauci then fed the intelligence community the very science he helped to orchestrate. So he was giving them the internal information. And here's one of the documents that was pulled out of this, this large dump that Rand Paul put forward. And this is from DARPA, the Defense Advanced Research Projects Agency. You can see it says unclassified at the top, and you can see the date there is the 13th August 2021.

**[00:19:52] Jefferey Jaxen, Investigative Journalist, The Jaxen Report**

That was five days before they released the booster shots for the third vaccine for the rest of the public. Keep that in mind as I read this. So this is a DARPA memo to the Department of Defense. So we're pretty high level here when we're reading this. And this was the breaking news at the time. It says SARS-CoV-2 is an American created recombinant Bat vaccine or its precursor virus. It was created by by an EcoHealth Alliance program at the Wuhan Institute of Virology, as suggested by the reporting surrounding the lab leak hypothesis. The details of this program have been concealed since the pandemic began. Again, Publix not getting this. The reason why non-pharmaceutical non pharmaceutical interventions like masks and medical countermeasures like mRNA vaccines do not work well. Well can be extrapolated from the details. The reasons why the early treatment protocols work as curatives are apparent. And it goes on to talk about specifically why both of those statements are true. A imagine where we'd be if the public could have read this, if this was if the president at the time, or if Kennedy was HHS secretary, and he took this memo and confirmed it and said, this, we're releasing this right now. It's going out on all social media. We're going to have a public conversation about this pandemic so we can get to the bottom of this.

**[00:21:03] Del Bigtree**

Wow. I mean, it's I mean, this thing keeps unfolding as we get deeper and deeper into it. I'm glad Rand Paul hasn't taken his eye off the prize. So important right now.

**[00:21:14] Jefferey Jaxen, Investigative Journalist, The Jaxen Report**

Yeah, yeah. And a couple other people. I haven't taken their eye off the prize. Just to move on to the next story, here is the Director of National Intelligence till June 30th, Tulsi Gabbard. Tulsi Gabbard went to social media and released this video recently with some bombshell information. Take a look.

**[00:21:32] Tulsi Gabbard, U.S. Director of National Intelligence**

After months of searching through Intelligence Community holdings and files, today I'm releasing new evidence of long standing U.S. government funding of more than 120 Biolabs in over 30 countries. Now, these biolabs include labs in places like Ukraine, which could be at risk of compromise due to the ongoing Russia Ukraine war. In fact, the intelligence community had previously warned that a US funded bio lab in Ukraine likely housed dangerous pathogens and remained vulnerable to long standing threats of Russian attack, seizure or damage. Now, until now, evidence regarding the full existence and funding of these laboratories had been knowingly withheld from you, the American people. Many of these U.S. government funded Biolabs are currently or have previously engaged in research using hazardous and highly contagious pathogens and in some cases included dangerous gain of function research with very little visibility or oversight. Now, President Trump clearly understands the serious threat, dangerous gain of function research poses to the American people. And this is why he took decisive action over a year ago. On May 25th, 2025, he signed an executive order to end federal funding of gain of function research around the world here at O.D., and I issued new guidance to the intelligence community directing increased collection on these laboratories and facilities overseas.

**[00:23:01] Tulsi Gabbard, U.S. Director of National Intelligence**

And we're already seeing the results of this increased collection. We're learning new details, for example, on clinical trials that are underway at these facilities and that are raising significant ethical, financial and security concerns regarding the supposed public health initiatives and U.S. national security. Now, despite the obvious potential for catastrophic global impact, that research on dangerous pathogens and bio labs can have, politicians and so-called health professionals like Doctor Fauci, as well as entities within the Biden administration's national security team, lied repeatedly to the American people about the existence of US funded and supported bio labs. Not only did they lie, they threatened those who attempted to expose the truth. So this release today breaks new ground as the information surrounding the existence, history, locations and funding of these US funded bio labs has been intentionally covered up by very powerful people who falsely claimed that these bio labs didn't exist. Now they accuse anyone who says otherwise to be foreign assets and traitors to America.

**[00:24:18] Del Bigtree**

Both. Well, she's obviously I know she's already put in her resignation, but she is not leaving without making a statement. That's incredible.

**[00:24:32] Jefferey Jaxen, Investigative Journalist, The Jaxen Report**

And researchers are still really the public's really trying to wrap their head around this. This is such a big revelation. And notice, she said clinical trials we've revealed are underway at bio safety labs with biological weapons around the world. This isn't the end of the story. I mean, this is the beginning of a massive, massive unraveling here. You can go to the press release here from DNI, the office of the Director of Department of National Intelligence. Um, and but we want to talk about here when she's talking about lies from previous administrations. Remember, there were questions during the beginning of the Russian Ukraine war about US funded Biolabs. And look at how the Biden administration handled those questions. Take a look.

**[00:25:15] Del Bigtree**

Okay.

**[00:25:16] Female News Correspondent**

I wanted to follow up on your tweet yesterday about being on the lookout for Russia to use chemical or biological weapons in Ukraine and possibly creating false flag operations to use them. What is the evidence to back that up beyond what you said in the tweet? That it's a pattern from Russia? Is there is there more to this than it just being a pattern with them?

**[00:25:35] Jen Psaki, Former White House Press Secretary during the Biden Administration**

Well, they have a large biological and chemical weapons program. So it's a pattern, but they also have the capacity. Well, I'm not going to get into specific intelligence. We look at all of those factors. And we also know. And one of the reasons one of the the the main issue that prompted my Twitter thread yesterday was that Russia has a history also of inventing outright lies like this, which is the suggestion that the United States has a chemical and biological weapons program, or Ukraine does that. They're operating. Russia is the one is the country that has a chemical and biological weapons program. So Uh, the objective was to, uh, make clear the inaccuracy of the information, the misinformation they're trying to put out and make clear to the world that they not only have the capacity, they have a history of using chemical and biological weapons, and that in this moment, we should have our eyes open for that possibility.

**[00:26:34] Del Bigtree**

Wow. I mean, it's wild to just hear Tulsi saying lie to the American public and then just reflect back on that. All the things that were said to just be Russian disinformation, one of them being the vaccine issue. They said that was being driven by Russian bots. I was like, that's interesting, because I think I'm a part of the movement around medical freedom and vaccine risk awareness. I haven't run into a bot. Then we saw the Hunter Biden laptop make its way all the way into the debates saying that was Russian information. It was not misinformation. It was not. And now we see Tulsi laying out all these bio labs, as Rand Paul has been saying the entire time, and to watch the bold faced lie coming to us that that's just Russian disinformation. Um, it's scary, man. It's scary to think that they believe they would get away with it, I suppose is, you know, shocking in itself.

**[00:27:28] Jefferey Jaxen, Investigative Journalist, The Jaxen Report**

And it's a it's a lie with such global consequences. And you can see it wasn't just a press statement there. The media ran with this, um, outright lies. Psaki calls out Russian disinformation on non-existent US weapons labs in Ukraine. Okay, well, let's go to this press release from the office of the DNI. Gabbard. She reveals the evidence there. And you can see here in this first paragraph, 120 bio labs in over 30 countries. So it's not just Ukraine. Um, and then she goes on to say, until now, evidence regarding the full existence and funding of these lab laboratories have been knowingly withheld from the American people. The information surrounding the existence, history, locations and funding of these US funded biolabs has been intentionally covered up by powerful people falsely claiming that they they do not exist, and accusing anyone who says otherwise to be a foreign asset and traitors to America. I mean, those are huge, huge words, huge statements. That's just that puts a stake in the ground. We're in a new world now where you can have these people in the government, these certain people just fighting and exposing this much information. And with that press release came unclassified documents. So let's look at those. These are the declassified bio lab reports from the office of the Director of National Intelligence. You can see here, um, this is the capital city of Ukraine, Veterinary Research Institute of Experimental and Clinical Veterinary Medicine. They say it probably at least some dangerous pathogens and almost certainly remains vulnerable to long standing Russian information operation seizure and damage. Then you go down. Everything's redacted at the second paragraph, but you can see that that, that um, organization there is focused research on diagnostics and diagnostics and vaccines.

**[00:29:07] Jefferey Jaxen, Investigative Journalist, The Jaxen Report**

Um, and then it goes on even further. It It says as recently as 2019 had at least some biosafety and biosecurity deficiencies, most notably in rooms handling contagious brucella bacteria, according to reports. And again, the DoD was part part funding this under the Biological Threat Reduction program. We can go down to another one. Another picture here you have an image of Ukraine, the map, and you can see all the biosafety labs here. And you can see there there's a BSL three. There's quite a few of those there. This says over 40 labs built and supported. This is by the United States. And they have BW pathogens. These are biowarfare bioweapon pathogens from the Soviet era. They're calling they're calling them, quote, especially dangerous pathogen certifications. Um, and then final final image from this declassified document, you can see, um, according to the Ukraine labs, the web of connections to US bioweapons defense industries. And you can see there, USDA, CDC, um, all of these places collaborating in Ukraine with these bioweapons labs that were supported and helped, funded and built by the United States. And at the bottom there, there's a little tiny company called Metabiota. Well, it's interesting because why would they cover this up? Why would Jen Psaki go up there and lie to the American people? Well, maybe because the son of the current president at the time was securing was securing deals, backroom deals to get these bio labs set up. Here's 2022 New York Post. Hunter Biden helped secure funds for US bio lab contractor in Ukraine, and they actually posted the emails here. You can read them. And this is this is the emails.

**[00:30:42] Jefferey Jaxen, Investigative Journalist, The Jaxen Report**

As promised, I've prepared an attached memo which provides an overview of metabiota our engagement in Ukraine, and how we can potentially leverage our team, networks and concepts to assist Ukrainian culture. Economic. Then it goes on to say, please find few initial points to be discussed for the purposes of analyzing the potential of this, as you called, Science Ukraine project. And then sure enough, you can see there in 2014 you have The US spending.gov. They give a start date and you can see anywhere between about 18.4 to \$23.9 million. Metabiota is receiving from the Department of Defense to help with these Ukraine based biolabs. But it's not just Hunter Biden. It goes back previous administrations and two, when Barack Obama was an Illinois senator, he was actually. You got a question. How deep is this web and what's going on? Is this a money laundering operation as well? So here's another headline. Uncovered web pages show Barack Obama led an effort to build a Ukraine based bio lab, handling especially dangerous pathogens. This goes so deep. And like I said at the beginning of this this conversation, we're just starting to find out the implications of this and how politically deep it goes, but also how it's shaped the science community. Because on the back end, you have the US funding these bio labs, but then you have people like Gates and Fauci leveraging, you know, the oops accidents that come out the other end when the gain of function work spills out and they leverage it to make money off the vaccines. So this is this is groundbreaking, groundbreaking from Tulsi Gabbard. So I really her work in there cannot be understated.

**[00:32:16] Del Bigtree**

Absolutely incredible reporting. Jefferey. Um, you know, it feels like things that I on one hand, I just keep thinking how much we had it right all along. We were we were letting people know where we were skeptical where we had hypotheses. We didn't have all of the information, but we were pointing to all of this. We believed this was out there. And now it's like it's all coming full circle. And, you know, as I keep reporting, as I travel the world, I know we all want to just look the other way, put Covid in our rear view mirror as though it was an anomaly. But we've got to take what Tulsi Gabbard is saying to us very seriously. First of all, the American government now feels fully justified to lie to its people. Which means, you know, there are certainly times where maybe we are in a **place where it is no longer a government of, for and by the people. We should be thinking very clearly on that as we come into the 250th anniversary of our freedom here in America.** But you also see, as I travel the world, a concerted effort to make us terrified of a virus that was not that terrifying. It was scripted from the beginning to remove products that actually worked for us, to get as many people killed as you possibly could with a relatively benign disease and everyone Jefferey as I travel the world, every doctor, I mean, I'm just this may seem simple. You know those things Jefferey we report on it all the time. But here's the simple truth. Every doctor, no matter where they were in the world, usually they were the best and brightest. As it's turning out, they had already worked in the health departments. They were. They certainly were best friends with people in the health department.

**[00:34:02] Del Bigtree**

They were the top doctors, just like Peter McCullough is here, the top heart doctor in America. I'm talking to the top, you know, disease, infectious disease experts in Poland or the best cancer doctors in England or, you know, you name it. But every doctor that found cures for Covid that were having 100% success protecting and saving their patients, all had the same result. They were excited about it. They called the health department and said, hey, we don't need to panic. I have found the way forward. Everyone in my department is using it. Our success rate is better than anyone else in the country. Every single one of them immediately met. Stop what you're doing. Immediately cease and desist. What do you mean? I thought we were looking for a cure. You know, Henry, it's me, Bob. It's me. Like we're friends. And just the health department acting so strange and then saying no. Do you want me to do a double blind trial or do a trial? If you do that trial, we will pull your license. So essentially around the world, Covid removed the licenses of every single doctor with a solution and celebrated those that took their marching orders, did not treat their patients, sent them home to get more sick, brought them in, stuck them on ventilators, and then essentially murdered them. That is now the hierarchy of medicine that exists in the world, because the best and brightest have lost their licenses. It's really quite stunning. And I'm just using that to put an exclamation point on how dark these times are, and to appreciate Tulsi Gabbard for the risk that she's taking in telling us the truth. So amazing reporting, Jeffrey, thank you for bringing us up to date on that. I'll see you next week.

**[00:35:46] Jefferey Jaxen, Investigative Journalist, The Jaxen Report**

Alright. Thank you.

**[00:35:49] Del Bigtree**

Well, look, I say it all. You know, I say it every week. You are funding lies. You're funding liars, you're funding liars in your government, you're funding news agencies to lie to you. Like when you see, you know, Ron Johnson being asked about an issue and CNN doesn't even want to cover it, doesn't want to cover the biggest. Think about it. If this is true, which clearly we know that it is, but even for CNN or any reporter, if our government lied about the dangers of a vaccine they were forcing us to take, and more people were dying than we knew. How is that not a story? I'm not interested in that story. I'd rather talk about Iran or whatever is going. You know, these are amazing things. Journalists not having any sort of question inside of them, running on scripts that they're just presenting to us. Uh, when the world is starting to turn that direction, especially if you live in a free country, the moment you start realizing that even the news agencies and the letters you used to trust, those news anchors you used to trust can no longer be trusted. The party. Maybe you grew up in can no longer be trusted. Uh, that's a crisis. That's a crisis in which you need to work. And we all need to work very hard in finding our community. Where are the truth tellers and where am I going to get my information? Because clearly, this isn't the end.

**[00:37:11] Del Bigtree**

Clearly, we can't think that this is over. Silicon Valley hasn't stopped making vaccine passports. They're going to go in your phone. They haven't stopped social credit scoring systems. Pharma hasn't stopped making mRNA vaccines. Whether Bobby is getting them tested or not or blocking them for the moment. So everything that was supposed to be brought in place by Covid is still full steam ahead. And as I travel the country, I start realizing we are all just in different, you know, timelines with authoritarian global takeover, if you will. So I'm about to get into Poland, but I just want to say, if you actually want real investigations, if you actually want to invest in truth over lies. And if you want a news agency that doesn't just report on the problem, but then hires like the best constitutional attorney in the world to go and fight on behalf of, you know, not necessarily our news agency, but for my kids. I'm psyched I get to do this because I'm trying to save the world for my son and my daughter and your children. We are. We're going to get one shot at this, right? We're coming into the close out. Can you imagine if that administration that completely and totally lied to us was still in position today? Where would we be? What would this country look like? What would the world look like? So while we have some wind at our backs, I hope you'll help us get it done.

**[00:38:39] Del Bigtree**

We have the \$1.5 million match right now. It's going great. Where are we at? There we are, \$550,000, which is awesome. But we only have till the end of June to make up about \$950,000, so I would love it if you would recognize this opportunity to double your money, to double your investment, to make the world a better place, but most importantly, to make sure that this 250 year anniversary is not just an anniversary of the death of a nation, but the celebration that our light continues, that freedom continues, that free speech continues, and free free press continues, and freedom of religion. All of it is contained in this vaccine issue, and no one is better at fighting for it than we are. So I hope you'll become a recurring donor. Just hit that donate button at the top of the page. Whatever you can give. We're asking for \$26 for 2026. \$26 a month. That just means drop one lunch or maybe one breakfast really a month intermittent fast, and send it over to us. It does actually make a huge difference. But if you can do more, or if there's a special project you want to get involved with and all that you're seeing, or want to have a list of the things we're working out, why don't you send us your information at info@ican.org, and just let us know that you want to have a completely private conversation. They all are.

**[00:40:06] Del Bigtree**

And we'll discuss maybe how you can donate. We take donations by mail stock, international transfer, crypto vehicles, gift cards, legacy giving. Because we are in the crisis point right now. Aaron Siri, we're going to be sending him to the Supreme Court maybe within the year, but certainly on the horizon. So really, anything you can do to help, if you're listening right now, just pick up your phone, text the number 72022 right in the word donate. And I'll respond with a text to you to get you involved, to let you be a part of the Informed Consent Action Network so that you feel the victory every time we have a victory. So that when you hear that news, you say, you know what? I funded the news agency that told me that four years ago. Um, that's what we're doing here. And I want to thank everyone that has made the high wire possible. I want to thank everyone out there in New York, the people that have funded my going out to France and Poland and zero spike in Italy and Japan, um, where I am this week. But, um, ultimately this journey is, is in a way blowing my mind. I guess some of you might be thinking del like, no, duh, you were reporting on it the whole time, but there is just something to hearing different nations, different doctors, and different places when they tell the story. And it's identical. Like, I had a cure and I lost my license for talking about it.

**[00:41:35] Del Bigtree**

It's insane. We kind of I think we've just become numb to these statements. But how was it? It happened on day one in Italy. How does it happen in every hospital, every head of the hospital is like, oh yeah, yeah, no, no, no, we are suddenly going to reverse a centuries old, if not longer idea of early treatment is best. No, we're going to, you know, delay treatment, something medicine had never done before. And everyone was okay with that. It was amazing. Well, thank God for the freedom fighters. And there's really one of the biggest ones I've ever met. There's one mom that everyone, if you're in Poland credits with no. She runs the medical freedom movement in Poland and is able to get at times hundreds of thousands of people into the streets of Poland for some of the biggest protests we saw during Covid. She got a couple thousand out just for me and Brian Hooker and a few politicians to give a speech in front of the presidential palace. I'm talking about Justina Socha. Uh, her stop knob is the nonprofit that she runs everything through. I had an opportunity to sit down with her and just get a sense of, how are you in this? How big is this? Are you going to win? Take a look at this. What is your area of expertise? What are you doing in this discussion?

**[00:43:01] Justyna Socha, Social Activist, Journalist & President of "STOP NOW"**

My name is Justina Sawyer. I am the president of the Polish Association on the Knowledge of Health and Vaccines. I am a mother of four children and I'm a mother of a son with post-vaccination complications. Currently, I've been cooperating with Polish members of parliament, medical doctors and with lawyers, and we are about to change the system.

**[00:43:24] Del Bigtree**

So you're really one of the lead voices of the medical freedom movement here in Poland.

**[00:43:30] Justyna Socha, Social Activist, Journalist & President of "STOP NOW"**

And corporate media. Call me the leader of anti-vaxxers in Poland.

**[00:43:34] Del Bigtree**

Good for you. Was the injury to your child? What first got you into this?

**[00:43:44] Justyna Socha, Social Activist, Journalist & President of "STOP NOW"**

That was the first thing, but it was the financial penalties that were imposed by the Polish government on me that made me act because I sued those decisions. I won at court and I started helping other parents.

**[00:43:58] Del Bigtree**

When did, uh, Poland begin the vaccine mandate that would then cause fines if you didn't do it?

**[00:44:10] Justyna Socha, Social Activist, Journalist & President of "STOP NOW"**

The mandate of vaccines started even before the Second World War with vaccination against the pox, and it was always mandatory and there were fines, and there was even a risk of going to prison. But it definitely intensified with the regime change in Poland, when Poland actually started to become the colony of the corporations.

**[00:44:34] Del Bigtree**

What happened to the movement during Covid? Did you see an expansion in the anti-vaccine movement.

**[00:44:43] Justyna Socha, Social Activist, Journalist & President of "STOP NOW"**

The association has become a fundamental element in this movement, and on the 28th of November 2020, the Chief Sanitary Inspector, Jaroslav Pinkas, who was in charge of managing the pandemic in Poland. He said a very specific thing. He said that the artificial intelligence that was used for counseling to the government did not anticipate the anti-vaccination movement, did not anticipate that people would get information so quickly.

**[00:45:18] Del Bigtree**

They say here in Poland, maybe 50% got the Covid vaccine. If that's true, that's the lowest vaccine rate, maybe in the modern world. Um, what is it about Poland or Polish people that the resistance was that big?

**[00:45:38] Justyna Socha, Social Activist, Journalist & President of "STOP NOW"**

Polska Poland is the third EU country with the least vaccinated people, the first one being Romania and the second one Bulgaria, which are all ex-communist countries, are so not trusting. The government is in our blood and fighting for freedom as well. And we had seen several times in the past that when the authorities go too far, they lose. And the harder it gets, the sooner we win.

**[00:46:11] Del Bigtree**

Okay. Thank you for your time, I appreciate it. Very good. It was interesting.

**[00:46:15] Del Bigtree**

It was some of the things that, you know, we've talked about here. Um, can a movement continue if it doesn't have the pressure, if the pressure of Covid obviously woke so many people up, our ratings on the high were exploded at that time. And what she's saying is it really brought attention, but so fascinating, right.

**[00:46:33] Del Bigtree**

That Poland, of all the places I've traveled to Poland, has the lowest vaccine rate, especially when it comes to Covid. More than 50% did not receive the vaccine. In fact, when you talk to people in Poland, they'll say it wasn't even 50%. Most of us were just signing fraudulent documents and telling them to screw off. So there's a chance they didn't get any vaccines at all. But they point to Romania and Bulgaria as even being ahead of them. But all those nations, what do they have in common? Communism. They all realize they know what communism looks like, and they know a red flag goes off when it starts looking like we are sliding in that direction. You really wish these people could get a chance to go and speak at the universities in the United States of America, where it appears that kids are starting to believe that communism might be a good idea. We just haven't given it a fair shot. Unbelievable statements, and we see it in the voices of our youth right now in America. Wish they could have visited Poland, but Houston is a dynamic character.

**[00:47:42] Del Bigtree**

What an amazing person. Her own vaccine injury and her family a pushback. She fought in courtrooms and won. And now she's leading this movement. There's about they say there's about 3 or 4 members of Parliament that are now on their side. They, too, have, you know, a Rand Paul, a Ron Johnson, a Thomas Massie. They're in Poland. And every one of those individuals pulled me aside and said, Will you please talk Justina into running for MP? We need her inside of government. All this stuff outside is great, but we need her power inside of government. We'll see where all of that leads. But one of those MPs that made it possible for Brian Hooker and I to deliver like 30 or 40 minute power points in Parliament that was recorded like just like we were in the Senate was recorded on their system broadcast live from the government channel. A super awesome opportunity. Uh, his name was Roman Fritz, uh, a great guy dynamic who believes in freedom and is in the fight of his life in Poland. Here's what he had to say.

**[00:49:00] Roman Fritz, Polish Politician, Member of the 10th Term Sejm**

I'm a member of Polish Parliament and my name is Roman Fritz. I'm one of three MPs of the Polish party, of the Crown of the Republic of Poland.

**[00:49:10] Del Bigtree**

Justina is the, you know, a leader, I guess, of a movement. Do you see that movement as having some voting power, you know, to help politicians like yourself get elected?

**[00:49:25] Roman Fritz, Polish Politician, Member of the 10th Term Sejm**

Well. As you have heard Justina speak, she mentioned that 70% of young people in Poland are below the age of 30, are not planning to vaccinate their children. It is a very clear signal to me and an indicator that it may have a political importance and elections as well, because there is no other political party in Poland who would officially speak about not having a mandate on vaccinations in Poland in their political agenda. To us, it's obvious because it infringes upon freedom, and freedom is our main value.

**[00:49:59] Del Bigtree**

Did you did you push back against, uh, mandates?

**[00:50:08] Roman Fritz, Polish Politician, Member of the 10th Term Sejm**

At that time, I was not a member of Parliament, yet I was a politician and deputy president of the Confederation of Polish Crown Party. So what we did in the time of Covid, it was in autumn 2020, we convened a parliamentary commission session and we called it Nuremberg 2.0. And that was the atmosphere as well, because we wanted to speak out about the absurd and the criminal nature of the activities that were imposed on citizens during the Covid 19 regime. So we had witnesses and we had accounts of people who were hurt, and the regulations that were imposed were not legally correct. They were not in line with the research on health and medicine.

**[00:50:49] Del Bigtree**

Here in Poland. I'm hearing that the Covid vaccine uptake was only about 50%. I'm traveling the world right now. That means in the industrialized first world nations, Poland may be the least Covid vaccinated. What does that tell us about the Polish people?

**[00:51:13] Roman Fritz, Polish Politician, Member of the 10th Term Sejm**

Well, lots of I think one of the features the Polish people have is their ability to really maintain common sense. They are quite distrustful. I think this quality that people have in Poland is due to our past with communism. We learned not to trust whatever was said on TV Because back then these were things that were not quite true, to say the least.

**[00:51:35] Del Bigtree**

I'm hearing rumor of a potential vote for a law to take away the right to holistic medicines, herbal medicines, things like that.

**[00:51:48] Roman Fritz, Polish Politician, Member of the 10th Term Sejm**

So here's the plan. This is a plan, and it has been present for two years. When the Polish Parliament was trying to process this draft law, that there is only one correct way of treating people, which is based on so-called science based medicine, science based medicine. And anything that does not fall into that category would not be accepted. The plan is to have punishments to persecute practitioners of non-conventional medicine, which would be anything different than the medicine governed by the system created between pharma and the government. There is an example of a medical doctor from a town in Poland where her medical license was revoked because she uses homeopathy to treat patients.

**[00:52:33] Del Bigtree**

What is the likelihood is the energy in Poland moving in that direction?

**[00:52:41] Roman Fritz, Polish Politician, Member of the 10th Term Sejm**

In this very building, we had a small debate regarding this draft and the members of Parliament and representatives of governmental agencies and bodies, plus the lobbyists from Big Pharma, they behaved as if they were the sales representatives of the pharmaceutical industry. So I am convinced that this draft can pass and it may enter into force. The only question is, will the president, Carlo Navrotsky, veto it? Because he may, and I hope he will. If he does, it will be blocked.

**[00:53:14] Del Bigtree**

It seems this law would take a step further than almost any other nation in the world. Do you feel that Poland is on the front line is being used as a test group, maybe for the EU, but also for America and the world.

**[00:53:36] Roman Fritz, Polish Politician, Member of the 10th Term Sejm**

I think it's quite possible. And if the test works in Poland, it then may be promoted or spread out throughout the entire European Union. To answer the question, why Poland? I think a good reason might be the very strong mandate that the governing coalition received in 2023 when they gained their power. And since then, those people have been trying very hard to make our lives harder and harder. That's the way I see it.

**[00:54:04] Del Bigtree**

Thank you for your time. I appreciate it.

**[00:54:06] Roman Fritz, Polish Politician, Member of the 10th Term Sejm**

Thank you for coming here. Yes. Yeah. Welcome again to Poland. Thank you.

**[00:54:11] Del Bigtree**

Well, Roman was a really cool guy. I was psyched to get to spend some time with him. Um, I had made a mistake. He wasn't in Poland, in Parliament during Covid. He was sort of running the party that he would end up getting a place in Parliament. But, you know, hosted Nuremberg 2.0. That's what they called it. That's how they saw it. So, you know, fighting for freedom right there in Poland. But this law, everyone's talking about it. And we should really be considering this to look at this. The government has adopted a Lex imposter. That's the name of the bill. Up to a million zloty fine for violating patients rights. Essentially, if you use any form of natural healing modalities, you could be fined up to a million Polish currency for doing that. I don't I mean, this is the first time I've heard of something like that, but I have seen the writing on the wall. I've been saying, as I speak to chiropractors, conventions and all health conventions, all of America, the pharmaceutical industry's ultimate agenda is to get rid of any competition. It's the end of sort of when Rockefeller, you know, went out against homeopathic homeopathy, started creating drugs made out of the petroleum that he was getting out of the ground. The hole in the Lexton report. All of these things get down to that. But as I said, when you travel the world, you start seeing we're just in different stages of an overall global goal.

**[00:55:41] Del Bigtree**

And in Poland, they're attempting. And as he said, it looks like it will pass unless it gets vetoed by their president. A total removal of your ability to any holistic health modalities. I believe there'll be chiropractic, acupuncture, homeopathy, herbals, who knows what happens with vitamins. Um, and that's happening in a nation where they can't even get 50% of the people to believe in the vaccine program. Um, so just something to keep our eyes on. Do we think that that's impossible in America that will never happen in America? I would point to Covid. We were locked in our homes. My kid wasn't allowed to go to school. That happened in America anyway. As you know, I sort of talked to many doctors and scientists. One of them was Dorota Sinkovics. I'm not sure. I'm sure I did not say that. Right. But she is really one of the leaders. She represents the group of all of the doctors that got disenfranchised during Covid that lost their licenses or had them under review. They now have a consortium together that she's in charge of. A pediatrician by trade that had some interesting views on what was happening in Poland around the world, and what she thought was science gone astray when it comes to dealing with children. This is Dorota.

**[00:57:00] Dorota Sienkiewicz, Pediatrician & Rehabilitation Specialist**

My name is Dorota Sinkiewicz, a medical doctor. I have a specialty in pediatrics and medical rehabilitation, and I have worked many years in university clinics. I am the head of Polish Association of Independent Medical Doctors and Researchers. It has been set up in 2021 as a response to the pandemic and decisions that were taken by the Ministry of Health at the time, including the proposals to get vaccinated, and that would cover children as well. We wanted to express our opinions and to ask questions. We wanted an open public debate.

**[00:57:40] Del Bigtree**

What were your biggest concerns that you were bringing attention to during the Covid pandemic?

**[00:57:46] Dorota Sienkiewicz, Pediatrician & Rehabilitation Specialist**

I guess vaccinations was the highest concern.

**[00:57:49] Del Bigtree**

Why?

**[00:57:51] Dorota Sienkiewicz, Pediatrician & Rehabilitation Specialist**

I guess it was the highest concern because we had had by then some information from international researchers and also some Polish professors of genetics saying that these vaccines were not actually vaccines, but experimental products that could disrupt human genetics and cause serious adverse effects. I was most concerned when I learned that the plan was also to vaccinate children and according to clinical principles, the children may receive vaccines only after the trials on adults are finalized. And we knew that the vaccine products were only at the third phase trials, which made it even more scary.

**[00:58:35] Del Bigtree**

Prior to Covid, had you questioned vaccinations of children?

**[00:58:42] Dorota Sienkiewicz, Pediatrician & Rehabilitation Specialist**

My first specialty is pediatrics, and then I specialized in medical rehabilitation, and I worked at neurology departments. And even before that, I was interested in natural healing and natural remedies, homeopathy. For example, I had realized that vaccinations posed a problem, and I took part in debates in the Polish parliament around vaccines. Speaking about the dangers that substances such as adjuvants bring, and about the complications in my day to day practice, I had seen children with post-vaccination injuries, with developmental delays and with neurological deficits.

**[00:59:24] Del Bigtree**

In America. We've seen an incredible decline in overall health. Of our children, roughly 13% had chronic disease in the 1980s, and now it's over 5,054% in that range. What have you seen in your career as the health of children in Poland?

**[00:59:47] Dorota Sienkiewicz, Pediatrician & Rehabilitation Specialist**

I worked at Gastroenterology and Allergology clinic with children. The main narrative was that allergy and GI problems are civilizational diseases, the diseases of the 21st century. Now, I am certain that GI and allergies, their chronic nature is related to the amounts of vaccinations that children received, I had seen an increasing and intensified increase of chronic diseases prevalence in Polish children.

**[01:00:22] Del Bigtree**

That's interesting. So they blame it on modern society allergies, but don't recognize the big change in modern society as vaccinations. Yes. Wow. Is there persecution of doctors that speak out in Poland?

**[01:00:37] Dorota Sienkiewicz, Pediatrician & Rehabilitation Specialist**

So recently in the association, we had covered the topic of HPV vaccines, and we addressed that on our website and in the parliament. And we got sued. And there's a court case in this doctor's court. It's like disciplinary proceedings march this year. My license was unsuspending. It had been suspended when I recorded a short video to children, to adolescents and young adults, warning them of the dangers of the vaccination against Covid 19. So I got my license suspended for one year. It got unsuspending and now I have the next court case about HPV.

**[01:01:21] Del Bigtree**

What gives you the courage to speak up the way that you do?

**[01:01:27] Dorota Sienkiewicz, Pediatrician & Rehabilitation Specialist**

I'm a pediatrician and I know too much to stay quiet and not to raise an alert. I want to be able to look myself in the mirror. There is a quality about Polish people. I think we have some gene of resistance. We have also kept some common sense, at least a group of us. Historically, we had been fighting many times for our freedom and sovereignty. We could be the ones to show the world how it is done.

**[01:01:57] Del Bigtree**

I hope you're right. Thank you.

**[01:01:59] Dorota Sienkiewicz, Pediatrician & Rehabilitation Specialist**

Thank you very much and thanks for your coming.

**[01:02:02] Del Bigtree**

It's amazing when I was watching that clip again and I just thought, you know, we don't hear on the news anymore. There's one doctor named Andrew Wakefield that's made a connection between vaccines and autism. Those days are long gone. There's not clearly there's not one doctor now. There's, you know, what, 20, 50, 100 in America that are vocal about it. But now you're seeing doctors all around the world that were all on the same research, coming to the same conclusions. But wasn't that an amazing statement? She said that in Poland they train you that these all this rise in autoimmune disease and, you know, neurodevelopmental disorders and gut dysbiosis, those are all products of what they call a civilizational diseases. There's a rise in civilization diseases, meaning the more civilized we get, the sicker we get. What a bizarre thought. Yet in some ways, it's really honest. Yeah. If we keep being as antiseptic as we are, if we keep putting antibacterial soaps on everything and, you know, taking away the priming of our children's immune system through natural childhood illnesses. They're right. We are seeing a rise. It's kind of a good way to put it. Our modern society that is weak and moving us towards Wall-E, if you will, we're all just floating pointlessly in space is slowly just destroying the health of our species, essentially. We're not going to the gym and working out anymore.

**[01:03:35] Del Bigtree**

We're not working out our immune systems. And so, as I've said before, we're the only mammal on the planet whose bodies can no longer handle the environment. Instead of protecting us, our immune systems are attacking our own bodies. Just happens to be the smartest man mammal. Or in this case, I guess, the most civilized that are having such a problem with illness. Well, obviously, if you have doctors like Dorota, whose license was revoked for a year, and other scientists and doctors like America that are, you know, having their license under threat. All of these people, there's a forced vaccine program that really took hold right around the same time as SB 277 in California, which is something I'm finding too. Right around 2014, there was this surge all around the world, and California just happened to be a part of it. Or was it planned? Were they all going to the WEF and say, guess what we're working on this year? Certainly seems like that's the case, but you need a good attorney, right? Just like we have in America. Well, I sat down with really Poland's Aaron Siri, who's had a lot of success in courtrooms fighting both for vaccine injured people, but also doctors who are losing their licenses. This is Arkadiusz Tetla to take a look.

**[01:04:55] Arkadiusz Tetla, Attorney at Law, Kancelaria Adwokacka**

I am an attorney at law, and I have been supporting the parents and scientists that fight the vaccination mandate. So I represent the parents at court when they file complaints against post-vaccination injuries. In 2018, I was counseling and supporting the Citizens Legislative Initiative that was aimed at stopping the vaccination mandate in Poland.

**[01:05:18] Del Bigtree**

What made you focus on vaccinations?

**[01:05:24] Arkadiusz Tetla, Attorney at Law, Kancelaria Adwokacka**

My son, after one of his vaccines, he developed complications. And before that, I hadn't realized how serious the risks were. I started noticing how much of the medical procedures are being imposed in Poland, the procedures that involve risk, and to what extent the institutions that should protect the rights of the citizens really don't do that. And quite the contrary, they seem to be acting in the interests of pharmaceutical companies. The Covid 19 pandemic made me realize how serious this problem was, particularly when doctors started to be really persecuted. So I got involved in supporting them and helping these doctors. The court trials reminded me of witch hunting, where the statements of the doctors didn't matter, and the evidence they would put forth didn't matter. What I saw back then was unparalleled to anything that I had witnessed before. The accused doctors, they were charged with no evidence of their guilt. Their licenses were suspended, not as a result of a medical error, but preemptively based on their opinions. And it was like a protective sort of measure for them not to practice. So to regain our medical freedom, the first thing is to exclude a possibility where they are punished for their medical opinions. The second thing we do is if we see problems like these ones, we put forth citizens legislative initiative, like a draft of an act of law. And we did that in 2018 when we wanted the vaccines to be voluntary and not mandatory. The third way that we act is when every parent, if they receive the financial penalty, the fine for not vaccinating their child, they may go to the court. So the fines in Poland, they are up to 50,000 Polish zloty, which would be like maybe 15,000 USD per dose. And there are 29 doses.

**[01:07:23] Del Bigtree**

Per dose.

**[01:07:24] Arkadiusz Tetla, Attorney at Law, Kancelaria Adwokacka**

Per dose. So if they lose the administrative court, they can appeal to the Constitutional Court. And there are 300 cases about the mandatory vaccinations waiting to be reviewed by the Constitutional Court, which is the largest number out of any other topics that are at the Constitutional Court now. And the fourth way is the civil lawsuit for the compensation for the post-vaccination injuries.

**[01:07:48] Del Bigtree**

So they don't have liability protection here.

**[01:07:52] Arkadiusz Tetla, Attorney at Law, Kancelaria Adwokacka**

So we don't have the liability protection as the active in 1986 by Ronald Reagan in the US. We may sue the producers. We do that and we also sue the state, the Ministry of Health, the doctor that administered the vaccine, the center, the clinic where they work and the insurer. And these trials are really interesting because oftentimes they would just ping pong the blame, saying that it is the doctor that made the wrong decision and so on. So we expect ruling in many of such cases. For instance, in Warsaw, there's a case of a boy, Adam, and after vaccination he developed autism and he had metal poisoning when his brother, who was not vaccinated, doesn't have any metal poisoning in his a healthy boy. So we are expecting expert opinion on that. My hope is to free ourselves from the influence of the big corporation on our lives, and also to enable an open medical discussion for doctors to regain our freedom. So when Polish people realize that they had been lied to, they really mobilize a huge power. So I think we will have this enormous power to change our country and the world, and the determination of parents whose children were injured is an unparalleled determination.

**[01:09:06] Del Bigtree**

Some amazing things, he pointed out there. First of all, what really woke him up was the fact that he felt like he was watching witch trials, watching doctors losing their license, and in court, they could provide no evidence for any wrongdoing. What have they done wrong other than just seeing solutions where you're saying there are no solutions, really incredible situations. He's doing brilliant work. But the bombshell was that Poland does not have liability protection. And he said to me, let me connect with Aaron Siri. We may have a way in to Pfizer, to Moderna here in Poland that you don't have in America. Uh, he'd like to team up. And these are the types of things that I'm discovering, right? We may actually be able to help each other. There may be benefits that certain nations have a different set of rules or laws. If we want to, you know, deal with Pfizer or get data or Moderna, Maybe America's not the strongest place to do it. Should we be working, you know, with allies across the ocean? I definitely think so. And this is some of the work as you're watching this that is now taking place. We're not just the high wire and international news show. How about our C four in the legislation, the work that our legal is doing, uh, working with other nations where they may have some strengths.

**[01:10:19] Del Bigtree**

So certainly capitalizing on several moments like that. There's a couple of attorneys I've met in our travels, one great one in France too. So just so you know, if you're like, well, why are you, you know, traveling the world? Because our answer may not actually be here. Our, our Constitution, our legal system. Since we've got liability protection, this may not be the best place to fight this. So why don't we go fight it where maybe we can win? So some of the things are in the works from that. Um, ultimately there was a great scientist. He was in the FDA, uh, just brilliant is focused on autism and all sorts of neurodevelopmental diseases. He was a hero in Poland until he decided to speak out against Covid. Like every other great scientist and doctor who had blood moving through their veins. Only thing is, he hasn't stepped down. He hasn't stopped. Doesn't matter that they removed him from Poland's FDA, he happens to have one of the biggest social media followings right now. People are tuned in to his every statement, and they're dramatic. This is Piotr Witzak. Take a look at this.

**[01:11:30] Piotr Witzak, PHD, Polish Biologist**

I am a medical biologist, and for many years I have worked in governmental agency that is equivalent to American, FDA or European EMA. It is the Polish Agency for Health Technology Assessment and Verification, where I assess the safety and efficacy of drugs. And I have a PhD in medical biology and immunology.

**[01:11:52] Del Bigtree**

When you first began your work. Were you a fan of vaccinations? Did you believe in vaccines?

**[01:12:01] Piotr Witzak, PHD, Polish Biologist**

I believed that vaccinations were one of the biggest inventions in human history, and that was undisputable. But then when I worked at the governmental agency, I noticed that something was wrong. The wake up call was for me, one of my close friends who regularly received the flu vaccines, and he had some other toxic metal exposure, and he noticed how his health started to decline very rapidly. And he associated that with the regular flu vaccines. He presented some data to me, and it was the first time where I verified the source data, the materials that are the basis for modern vaccinology and the mainstream science.

**[01:12:35] Del Bigtree**

What did you discover in that investigation?

**[01:12:40] Piotr Witzak, PHD, Polish Biologist**

What I discovered, it shocked me. None of the vaccines were tested in a trial that would use an inert placebo just to check for safety. What also surprised me a lot was how many toxic ingredients were there in vaccines? For instance, the ethyl mercury, which was not tested for safety and there was no justification, proven to even use it in a vaccine. And we keep injecting those substances to infants. Plus, the load accumulates in the body throughout the time, and the agency that is supposed to protect the health does not take that into account. So that was a moment when I stepped out of this matrix and started connecting the dots.

**[01:13:25] Del Bigtree**

Why aren't more health department officials seeing the problems with safety and vaccines?

**[01:13:35] Piotr Witzak, PHD, Polish Biologist**

When I worked at the agency for Health Technology Assessment and Certification, I actually tried to talk to my colleagues to make them realize these facts about the composition of vaccines, about the problems with assessment, and it was not an easy task. I think the most difficult part is to actually believe that the medical establishment in vaccinology is just wrong. For instance, Professor Plotkin, that is just wrong and that this entire world is either so corrupt or buys so easily into this narrative.

**[01:14:07] Del Bigtree**

Would you describe vaccine injury as rare, or would you have a different description?

**[01:14:16] Piotr Witzak, PHD, Polish Biologist**

I can state with high probability that vaccines constitute an important risk factor in terms of developing autism allergies, neurodevelopmental diseases and others, both in children and in adults. And I believe that these complications are not rare. In my practice. I deal with injured children and I can see how underreported the post-vaccination injuries are. The doctors do not report them, and the parents are discouraged from doing so.

**[01:14:42] Del Bigtree**

In the first film I made, VAXXED, I interviewed a scientist named Doreen Grandpa, who has more autism centers around the world than I think anybody. And, um, I asked her if, you know, if autism keeps going, does she imagine we could have a world that is autistic? And she said, I believe we're already designing that world, that the cell phones and our disconnection from each other is making it easier for everybody to communicate when they're all starting to have social, you know, issues. I think America is maybe the worst, but what is your assessment of what you're seeing in the population in Poland?

**[01:15:36] Piotr Witczak, PHD, Polish Biologist**

I do agree that we are looking at the society that will be autistic soon, and I think it will be due to several factors. There is this civilizational progress that plays a role and there are sociocultural changes. But what we also need to take into account is the toxicological burden. And people, when they have their bodies full of toxins, they react in a different way to stimuli. For instance, children with autism, they have quite a negative reaction to electronic devices, which is a very intense reaction, and that is due to hormonal disturbances that can be treated. They can be controlled. So there is a contributing factor and there is the main driver, which I think is the toxic poisoning that starts already in the fetal period with the mother's health condition, plus the quality of food, the diet and the lifestyle.

**[01:16:30] Del Bigtree**

Are you concerned? For your career? Are people at risk for speaking out on these subjects.

**[01:16:40] Piotr Witczak, PHD, Polish Biologist**

In the time of Covid? I criticized the official narrative and official recommendations. So I would speak out about the lockdown and as a result, I had to give up my job. And then I decided to do what I was always motivated to do, which is helping children with neurodevelopmental diseases and adults with some injuries. As a result of this persecution, we may end up in a situation where many people won't be able to get help. But what I find comforting is that an increasing number of people are really seeking information, and they don't trust the media narrative anymore, so blindly. So my activity in social media is to put out the word and to show people that there are safe and effective ways to control autism, or even to bring people back from autism.

**[01:17:23] Del Bigtree**

What is your hope for Poland and the vaccine program?

**[01:17:30] Piotr Witczak, PHD, Polish Biologist**

We are a nation of rebels which was really visible in the pandemic of Covid. Polish people do not appreciate their freedom being taken away from them, although with better life conditions we may be becoming a bit lazy and a bit passive. But with this act of law that is now being preceded in the Polish Parliament against the natural remedies. I think it may be a factor that in Polish language there is a saying like it's a nail to the coffin. So I hope people will really go and watch the speech.

**[01:18:05] Del Bigtree**

Amazing the work that he's doing. His social media has been very powerful. He actually wants to reach out and speak to some of the neurologists in America that are waking up to this issue. He has some hypotheses on what's happening with both autoimmune disease, how it's affecting the gut biome, but also then how that translates into autism and neurodevelopmental disorders. Super fascinating. Brilliant guy. That's doing great work there in Poland, you know, holding on to his license still. So our prayers are with him. The last interview I did, so many people says you've got to talk to Doctor Adam Niezgodą that Adam is, you know, a neurologist. He was a superstar in the country that was supposed to be running the university that he worked at, until suddenly he spoke the truth about Covid. And as always, watched his career and everything change around him. But a brilliant man who who still showed up to speak at Parliament when I did, has stood before the government and said, you are dangerous. What you are doing is dangerous to our society. It's dangerous to our children. He's never held back just a really great dynamic individual to watch this.

**[01:19:18] Adam Niezgodą, MD, Neurologist, Professor**

My name is Adam Niezgodą. I'm I'm a physician, a neurologist, and I work with patients who have disorders of the nervous system. So central nervous system, peripheral nervous system. And I work also as an Electrophysiologist. It is a functional exploration of the nervous system. I used to work as a as a teacher at the University in Poznań, in the west part of Poland. So I had an activity as a clinician, as an investigator, scientist, investigator, and, and a teacher.

**[01:19:56] Del Bigtree**

When did you start to investigate or look at vaccines and how they're affecting people?

**[01:20:07] Adam Niezgodą, MD, Neurologist, Professor**

Very early because due to my specialty, I dealt with many patients with complications concerning the nervous system. And I noticed quite early a link between hyperimmunization hyperactivation of the immune system and the result, which is a chronic disease of, in this case, of the nervous system, like for instance, multiple sclerosis or Guillain-Barre syndrome or other types of polyneuropathies.

**[01:20:37] Del Bigtree**

We're seeing this dramatic rise in immune issues. Shouldn't we look closest at the one product that is hyper stimulating our immune system?

**[01:20:51] Adam Niezgoda, MD, Neurologist, Professor**

Absolutely. You are right. But it isn't done. It isn't done. People just avoid this problem. It's a problem of lack of knowledge. Then there is a problem of lack of intellectual class to admit the lack of knowledge, maybe some fear about being bullied by, by the whole community, medical community. Because the one who asks too many questions or the one who has doubts is already labeled at once labeled an anti-vaxxer or something like that.

**[01:21:24] Del Bigtree**

Have you had any pressure on your career because of the position you've held?

**[01:21:30] Adam Niezgoda, MD, Neurologist, Professor**

Yes, one month or maybe two months after my public. When I spoke up for the first time here, the Parliament in 2021, when I was warning my nation about the problems and the threats, the dangers associated with too much hyper immunization, I was called to my boss and I was asked, do I want to work still here? So at the university. And so that was the first warning from that side. So don't speak too much. Otherwise probably we will not extend your contract or something like that, which finally took place. And I didn't try to get it extended because I was not interested into working in this type of community where the scientific truth is swept under the carpet and only legends have the right to exist.

**[01:22:29] Del Bigtree**

Have you looked at autism at all?

**[01:22:33] Adam Niezgoda, MD, Neurologist, Professor**

I have, and to my own surprise, after the massive campaign of vaccination during Covid time, there was also a very dramatic, skyrocketing increase in autism, including the adults. And the line of that increased incidence of autism is a line which reflects or is parallel to the line of saturation of the society of the nation with these preparations. So with the anti-Covid vaccinations. This is a proof, I would say 100% proof of causal link between these two events. I knew that autism in general is a kind of end state of inflammatory event, which takes place within the encephalon or central nervous system, which leads to a kind of encephalopathy and then finally to the. The end stage stage, which is this dysfunction, which we call, which we call autism, as well as in children. We can observe such an increased incidence in the adults. It was for me, a surprising thing, but we should not deny the reality we face in the numbers, statistics and so on. We should rather try to explain the the phenomena we can observe and eventually try to prevent them.

**[01:24:15] Del Bigtree**

During the pandemic, seeing an authoritative international, every nation, you know, seeming to have an agenda to bring even more vaccines, more mandates, more control through vaccines. What does this mean for the future of our species?

**[01:24:37] Adam Niezgoda, MD, Neurologist, Professor**

This means that there will be progressing progressive degradation, biological degradation of our species, and. We should stop this, this process. Otherwise the end is near.

**[01:24:55] Del Bigtree**

He had a way of putting things that. We are involved in a progressive biological degradation of our species. And this must be stopped. I love, you know, when he said he left the university, that he didn't even fight to keep his tenure there because he didn't want to work in a place where scientific truths were swept under the carpets, and instead, only legends are allowed to prevail. And then ultimately discussing how doctors and scientists go along with things, he said. They lack the lack of intellectual class to admit the lack of knowledge. Um, I'm going to try and remember that as I think about some of these doctors that just go along with what they're told. Anyway, what you see there as, as we keep showing you, there are brilliant scientists all around the world waking up. It's also what gives me hope. The genie, as I've said, is out of the bottle. There's no putting it back. There's no singular Andy Wakefield they can refer to anymore. Not in any nation in the world. And as you see, they're the best and brightest. Those that were the heads of their departments, the heads in the FDA, the heads of university, just as I said here, all end up having their licenses under review. And the people that killed more that had the least amount of success during Covid. They are who we now celebrate in established medicine around the world. Clearly, we need another system. Clearly, we need some way out of a hospital system, out of these government driven medical systems where the what they say is they fail forward. They're failing into their positions of power. And that failure means the death of innocent people.

**[01:26:50] Del Bigtree**

And I think I'm being nice, frankly, the murderer of innocent people. But as I had the opportunity the next day, after that long day in Parliament and doing all those interviews, and we went on to have a brilliant screening of An Inconvenient Study, some amazing questions. But then I they had set up a stage out in front of the presidential palace in a beautiful mall there in Warsaw outdoors. And, you know, at least a thousand, maybe 2000 people gathered there in the streets to hear it. Um, I kept thinking as I, you know, I always just sort of go with whatever I'm feeling as I step onto a stage. And I couldn't shake how everyone I met with. And you saw it in those interviews. We're talking about the G. We have a gene in Poland that makes us rebellious. Some even said they've tested and found this rebellious gene in the Polish people. I don't know if that science is true. I don't know how that study was done. But they all do have a sense of pride that they do not buy into the system the same way other nations do. And so my call to them in my speech in front of the presidential palace was we only had 30% not get the vaccine. And we got Robert Kennedy Jr and Donald Trump, the most hated guys in media elected. Can you imagine? You can't imagine what we could do if we had 50%. And so what are you doing? What are you doing as a nation? That was my call to them. In fact, here's a little bit of my speech in front of the presidential palace in Poland.

**[01:28:50] Crowd of People**

Freedom, Freedom, Freedom

**[01:28:54] Del Bigtree**

I bring greetings from America. Thank you for accepting us here in Poland. It's an honor to be here. During Covid, the authoritarian global system showed us their cards. They showed us what they think about us. They showed us how quickly they will take our freedom away. I'm traveling the world now and interviewing doctors and scientists and politicians in every country to understand what really happened. It's actually changed my perception of what took place. Every doctor that had 100% success healing people had their licenses taken away. This happened in every country in America, in Poland, in Italy, in Japan, across the world. That is why I believe this issue of mandatory vaccines is the most important issue in our lifetime. You already know this because you're voting for people that are telling you, I will make you free. I will not force vaccines on you. In America, we pride ourselves on our rebellious spirit. And that rebellious spirit during Covid made it that 30% of America did not take the Covid vaccine. But in my trip to Poland, I have discovered that there are people even more rebellious. Here in Poland, 50% said hell no. With 30% in America, we changed our president and we took the most hated man in health in media, Robert Kennedy Jr, and put him in the most powerful position of health in the world. I can't imagine what we would have achieved if we had 50% on our side. You have more power than even we do. So when are we going to change the world? If not now, then when? If not us, then **who? What are we waiting for? Our children need us now. Our grandchildren need us now. The future of our species needs us now. You have the power. Use it.**

**[01:31:20] Male News Correspondent**

**Thank you. Freedom. Freedom. Freedom**

**[01:31:34] Del Bigtree**

It's really amazing. I feel like we're finding kinship all over the world. We will be doing a show in the near future. Going through the interviews I did in France, I still have to show you the incredible interviews I did, uh, in England. Um, and of course, uh, Japan will be happening this week. So I just want to say right now, if you are in Japan, in Tokyo this week on the 20th and the 21st, a very important event, you can go to zero spike.com or click on this QR code. Please share it with anyone you know. In Japan, I've already been having meetings with, with.

**[01:32:12] Del Bigtree**

Uh, journalists in Japan, and they're very excited about it. On the second day on the 21st, we're doing a screening of An Inconvenient Study. Um, and then I'm going to have a Q and A after it. So that should be absolutely amazing. And also, as I return from that the following weekend, I'm going to be at Abby Rockefeller's farm in Hudson, New York. This is one of my favorite events that I do, the Churchtown Dairy. Um, this event is called Farm Food Freedom. You can get tickets to that at maxkane.com/events. Look at that venue. That's a barn. This barn she built in the round. Just phenomenal. The energy is amazing. Always a fantastic group of people and speakers and food. Natural cheeses and dairy, you name it. So if you're anywhere in the New York area, I hope you'll join us there. Uh, that's that's just always a beautiful experience every time I go. So I'm looking forward to seeing Abby out there, my good friend Max Kane, Um, **this week, um, we lost, you know, someone that's really, really critical and important to my being in this movement.** Uh, Kelly Gallagher was just a warrior. She was a warrior in her own life, fighting cancer multiple times, six pacemakers. You've never met anyone like her, uh, standing up trying to talk about the dangers of mercury in dental work and writing and and setting up congressional hearings on that.

**[01:33:46] Del Bigtree**

And then, of course, got into the vaccine issue and was actually working with, uh, Doctor Andrew Wakefield and Brian Burroughs on the film that would become VAXXED before I was even there. But I believe it was her, you know, you know, commiserating with Donna Schumann, the PR person that reached out to me at the doctors and of course, Sharon Winters. I, I did a talk recently talking about the people that had they not said yes, had they not done what they needed to do. Vaxxed might not have been here and who knows where this movement would be. But my journey starts because Kelly, Gallagher and Donna said, let's try to get this producer from CBS to take a look at this issue, to take a look at Andy's documentary. Kelly has been in my corner, um, countless times, always a source of guidance. And for everyone that knows her, uh, nothing but a source of the most amazing joy and, um, and, you know, pride and belief, belief that we were going to win. Um, so sit back just for a second and take a moment with Kelly Gallagher.

**[01:34:57] Female Speaker**

Kelly Gallagher is a poet and award winning filmmaker, strategist, writer, international speaker, researcher, and patient advocate. She also received two contaminated polio vaccines. At age 17, she entered the engineering program at the University of Florida. In her third year, she was diagnosed with Hodgkin's disease.

**[01:35:16] Female News Correspondent**

But over 20 years ago, one doctor told her she had less than a year to live. Kelly simply wouldn't accept that.

**[01:35:23] Kelly Gallagher, 5x Cancer Survivor**

I never really thought about cancer. I thought about what was on my to do list. I thought about my goals.

**[01:35:28] Female News Correspondent**

Kelly took charge of her own personal health plan. Even without health insurance, she never stopped searching for answers like when she opted out of chemotherapy.

**[01:35:38] Kelly Gallagher, 5x Cancer Survivor**

I've done everything. I did everything to survive cancer. They gave me a year to live 20 years ago. And and I'm, you know, still here. You know, I was in at the very beginning. Vaxxed one. And I came in, as you know, to help produce. And it needed somebody that really knew how to communicate from to the people. And, uh, my friend Donna Schumann had met this guy, Del Bigtree it just all kind of came together. It ended up launching us and going around the world and, you know, spinning into VAXXED one Vaxxed two Vaxxed three Highwire, all of these amazing things. God has put me in places where I have an opportunity to connect really big people for really big stuff and how I get there, I have no idea, but I think it's really time for everybody to, to wake up and stand up and, and let's, let's make our world a better place. I'm just so blown away. And how grateful and how the persistence and the commitment to the truth can really change the world.

**[01:36:41] Del Bigtree**

I had an opportunity to speak to Kelly a couple of times over the last few weeks. And, um, you know, there's something amazing that when, you know, your time has come to be able to look back and say. I did everything I could. She did what she dreamed to do. She felt complete. She knew she'd given it her all. She'd made things like VAXXED happen and so many other things. Docs who Rock. Great events. I hope we're all so lucky that when we look back, we can say we were present and accounted for, that we did what we could do, that we can look our children in the eyes. We can look at our grandchildren and think about a future and say, we stood up. We stood up for what was right. No one did that better than Kelly. **You will be missed.** And for everyone, we're going to continue to report the truth all around the world. We're going to share what we share, which is this existence, this life. And we're going to stand for what's right in whatever form that takes in every way we can. And I'll see you next week on The HighWire.

END OF TRANSCRIPT
