**NAME**

# EP 500 10/29/26.mp4

**DATE**

November 1, 2026

**DURATION**

2h 3m 54s

**95 SPEAKERS**

Del Bigtree
Jenn Sherry Parry, Executive Producer
Tony Sweet, CEO, United Broadcasting Network
Bill Nye, The Science Guy
Robert Kennedy, HHS Secretary
Paul Offit, MD
Jefferey Jaxen, Investigative Reporter, The Jaxen Report
Aaron Siri, Head Legal Counsel, ICAN
Dr. Stanley Ploktin, MD, World's Leading Authority on Vaccines
Kathryn Edwards, World Leading Vaccinologist, "The Godmother of Vaccines"
Dr. Peter Doshi, Associate Director, British Medical Journal
Dr. Rachael Ross, MD, PHD, Former Host, The Doctors
Dr. Sherri Tenpenny, DC, www.masteringvaccineinfo.com
Dr. Jim Meehan, MD, Internist
Dr. Paul Thomas, Pediatrician, Author, "The Vaccine Friendly Plan,"
James Neuenschwander, MD, Board-Certified in Emergency & Integrative Medicine, President, Medical Academy of Pediatric Special Needs
Denise Faustman, Director of Immunobiology, Massachusetts Hospital
Dr. Sin Lee, MD, Pathologist
Dr. Suzanne Humphries, MD, DrSuzanne.net
JB Handley, Author, How to End the Autism Epidemic
Jorge Araujo, Former Lead Supervisor, Vaccine Sterile Quality Operations, Merck, 1997-2004
Dr. Andy Wakefield, Director, Vaxxed, From Cover Up to Catastrophe
Female News Correspondent
Brent Wisner, Co-Lead Trial Counsel, Pilliod vs Monsanto
Prof. Christopher Exley, PhD, Aluminum Expert
Male Speaker
Female Speaker
Jenny McCarthy
Taylor Winterstein, Integrative Nutritional Health Coach, www.tayswaymovement.com.au
Dr. Soumya Swaminathan, Chief Scientist, World Health Organization
Male News Correspondent
Donald Trump, 45th & 47th President of the United States of America
Robert Redfield, Former Director CDC
Tammy Clark, OSHA Environmental Health & Safety Specialist
Denis Rancourt, PHD, Former Professor of Physics at the University of Ottawa
Darren Beattie, www.revolver.news
Tony Rogers, Political Economist
Reinette Senum, Mayor, Nevada City, CA
Dr. Daniel Erickson, MD, C.O.O. Accelerated Urgent Care
Scott Jensen, M.D. Calling for an audit of Covid-19 Death Certificates
Heiko Schoning, M.D., Organized Berlin Lockdown protest attended by over one million people
Dr. David Brownstein, M.D. , The Center for Holistic Medicine
Pierre Kory, MD, Founder, Front Line Covid-19 Critical Care Alliance, Expert in Treatment of COVID-19, Author, "The War on Ivermectin"
Bill Gates, Co-Chair, Bill & Melinda Gates Foundation
Dr. Peter Hotez, Texas Children's Hospital Center for Vaccine Development , Co-Director
Richard Mack, Constitutional Sheriff
Richard Bartlett, MD, Developed Budesonide Protocol for COVID-19 That saved countless lives worldwide
Simone Gold, Emergency Physician & Attorney
Mikki Willis, Director, Plandemic Series

Anthony Fauci
Peter McCullough, MD, MPH, Internist, Cardiologist & Epidemiologist
President Joe Biden, 46th President of the United States
William Makis
Brianne Dressen, Co-Chair, React 19, react19.org/study
Geert Vanden Bossche, PHD, DVM, Vaccine & Global Health Expert
Robert Malone, mRNA Vaccine Pioneer, Immunologist, Molecular Virologist, Vaccinologist, Pathologist & Physician
Alan M. Dershowitz, ESQ. Support Mandatory Covid-19 Vaccine
Neil DeGrasse Tyson
Sabine Hasan
Ron Johnson, (R) United States Senator from Wisconsin
Crowd of People
Joseph Ladapo, Florida Surgeon General
Five Times August, "Fight For You"
Ernest Ramirez, 16 year old died after receiving the Pfizer Vaccine
Hi-Rez and Jimmy Levy, "Welcome to the Revolution"
Russel Brand
Alex Jones
Naomi Wolf, Author, The Pfizer Papers
Sen. Rand Paul, MD. Chair, Committee on Homeland Security & Governmental Affairs (R-KY)
Jim Breuer, Stand Up Comedian and Actor
Rosanne Barr
Catherine Ybarra, ESQ. Attorney, Siri & Glimstad
Michael Connett, Attorney, Siri & Glimstead
Vani Hari, Food Activist, Author & Speaker, Founder, Truman, Blog: FoodBabe.com
Zen Honeycutt, Founding Executive Director, Moms Across America
Barbara Loe Fisher
Rob Schnedier
Brett Weinstein, PHD, Evolutionary Biologist & Host of Dark Horse Podcast
Marcus J. Zervos, MD,
Joel Salatin, Farmer, Owner/Operator, Polyface Farms
Ryland Engelhart, Co-Owner, Sovereignty Ranch, Co-Owner, Cafe Gratitude
Ian Somerhalder, Actor
Brandy Vaughan, learntherisk.org
Toni Bark, M.D.
Dr. Vladamir Zelenko, Family Physician
Sue Collins, Co-Founder, New Jersey Coalition for Vaccine Choice ,
Drea De Matteo, Emmy Award Winning Actress
Esai Morales, Award Winning Actor
Tyler Hudson, Singer and Songwriter
Libby Hudson, Singer and Songwriter
Andrew Wakefield, Academic Gastroenterologist
Dr. Aseem Malhotra, NHS-Trained Consultant Cardiologist, Heart Disease Expert, Professor of Evidence-Based Medicine
Dr. James Neuenschwander, MD, Board Certified, Emergency & Integrative Medicine, President, Medical Academy of Pediatric Special Needs, (MAPS)
Bob Sears, MD. Pediatrician, “The Vaccine Conversation”
Lindy Magee, Co-Director & VP of Mississippi Parents for Vaccine Rights

**START OF TRANSCRIPT**

**[00:00:06] Del Bigtree**
Have you noticed that this show doesn't have any commercials? I'm not selling you diapers or vitamins or smoothies or gasoline. That's because I don't want any corporate sponsors telling me what I can investigate or what I can say. Instead, you are our sponsors. This is a production by our nonprofit, the Informed Consent Action Network. So if you want more investigations, if you want landmark legal wins, if you want hard hitting news, if you want the truth. But Icandecide.org and donate now. Can you believe it, everybody? 500 episodes. We've been doing this for 500 Thursdays in a row. Yeah. All right.

**[00:00:56] Jenn Sherry Parry, Executive Producer**
All right, guys. Let's do this.

**[00:00:59] Del Bigtree**
Action. All right. Whew. All right. Good morning, good afternoon, good evening. Wherever you are out there in the world. It's time to step out onto the 500th episode of The HighWire. What an amazing journey this has been. So we're going to have a great time today. There's going to be a lot of reflection, a little bit of gloating, some honoring. And speaking of gloating, though, before I even get started, did you see the awards over there on that table? That is, I think it's 17 awards now won by An inconvenient study and festivals all around the world. So super exciting. That's been, you know, one of our journeys this year. And for anyone that's out there that has friends anywhere in the world that hasn't seen it, we now have 13 languages online at An Inconvenient study.com that this film can be watched. And it truly is helping us become that international sensation that we wanted to be. This is an issue. The issues we talk about, they matter all around the world, not just here in the United States of America. So starting out definitely want to celebrate that moment. I thought before I even get started with this show, I was thinking about, you know, 500 weeks ago was the first time that I ever did the Highwire. It's a crazy thought, but 501 weeks ago is actually how this all started. I was invited to be on somebody else's podcast in Los Angeles, and they gave me the address, and I showed up to this little podcasting studio at Gower Studios. I think there was like 5 or 6 little podcasting studios, and this person was in one of them, and I sat down and I did the interview. They were just asking me questions about the vaccines issues.

**[00:03:13] Del Bigtree**
And of course, I just spent a year where I'd been on tour with VAXXED, and I was talking a little bit about that, and I got up to leave and walk out and leave the studios, and the head of the studio stopped me. I'd met him when I came in. He said, you know what you are, you are really great on camera. You're great the way you, you know, talk about the issues you care about, you would be amazing in your own podcast. I was like, oh, I said, oh, thank you, I appreciate it. It was really kind of you. And I went to leave and he blocked the door. He said, and I said, I said, he said, I mean, it, you really need to try a podcast and I would love for you to do that here. We've got all of these studios set up. Why don't you choose a time next week. It's moments like that, right? There's these angels that come into your life. And I wonder, where would we be if this person hadn't stopped me at the door and said, you know what you should do? You should start your own podcast. Because the truth is, is up until that moment, really, I'd been at CBS, I was always behind the cameras. I was the one writing for the guy on the stage, and the thought of being in front of cameras, that was interesting. Well, I want to take a moment just to invite Tony Sweet on to this is the man, the myth, the legend. Tony. We wouldn't be here if you hadn't stopped me right there in your studios. And I want to honor you for that moment and ask you what made you think that this would work?

**[00:04:36] Tony Sweet, CEO, United Broadcasting Network**
Well, first of all, congratulations. 500. That's an accomplishment. You know, I've been doing podcasting since 2008, before it was even called podcasting.

**[00:04:46] Del Bigtree**
Wow.

**[00:04:47] Tony Sweet, CEO, United Broadcasting Network**
And, uh, when I, when I, in fact, it was my show who you were on.

**[00:04:52] Del Bigtree**
Oh, is that right?

**[00:04:53] Tony Sweet, CEO, United Broadcasting Network**
It was. Uh. And I always said I'm kind of like the, you know, hair clip for man. I'm, I'm, I'm owner of a network, but also I'm also a host. But and seeing someone like yourself walk into a studio with such a message, um, and passion that you had for, uh, your, your calling, I, I know was a calling. I just said I had to say something. You know, sometimes you people come into your life and you don't say something that really could maybe guide them in a direction. But with you, man, I, I was just like, this guy is a star. Um, he's he, he has so much to say. And and you were reluctant at first. I, I remember, I remember you were just one of those guys like, oh yeah, yeah, I'm more behind the scenes. I'll, you know, get interviewed. But who knew that? You know, just that conversation turned into such a empire. Really?

**[00:05:55] Del Bigtree**
It really is in so many ways. I mean, we're going to reflect on a lot of the achievements for The HighWire, for our legal team, all the work that we've done. But, you know, you really it was it was outside of anything I'd experienced. You genuinely did block me at the door. You dragged me back over. I'll never forget. And he had in the studio. So you had every day. I remember these little boxes were squared out. Like each hour there was like, you know, an hour spot available and you could pick which studio you wanted to be in. And a lot of them were taken up. You said, pick any open spot and it's yours. And I remember it was that moment I just looked and I said, you know what? Okay. And I went, uh, how about Thursday, 11 a.m.? Of course, this was in Los Angeles, California. 11 a.m. I'll come in next week and we'll try that spot. And we have been in that spot ever since. And I'll say the first person I interviewed was my wife, Lee. I just thought, well, we'll just talk about our journey and see how this goes. And the second the podcast ended, I realized you were right. I had a profound feeling that this was meant to be. And I kind of thought I should have done this a long time ago. So I want to just thank you for following that guidance. It represents, Tony, something I talk about all the time, which is how often are we being inspired, whether you believe in God or something bigger or just our connection inside of humanity. If we all just step into that, that that intuition, as you call it, that feeling. I think if we all promised to do that when those moments were happening, I think this world would be an even more amazing place than it already is.

**[00:07:38] Tony Sweet, CEO, United Broadcasting Network**
Yeah. And thank you for doing that. Thank you for trusting in my suggestion and faith in you. And because a lot of people don't take that up. So there was something in you that said, you know, what the heck, just just let's just move forward and do it. But I'm so proud of you. I'm proud of your team and how you've grown. And one day I'm going to come out and see your studio there. But, uh.

**[00:08:00] Del Bigtree**
So no bigger than I think that I think that original studio, I can almost reach both sides with pretty much fingertips. And, and I remember a lot of the, the wild things when I was doing these, you know, throwing pieces around and there's only one camera guy getting hit by all the stuff I was throwing. But there was it. That was the studio right there. Anyway, Tony, thank you for taking the time today to join us. I love you, I thank you, I honor you, uh, this may never have happened without you. So thank you for for for helping me find this moment.

**[00:08:31] Tony Sweet, CEO, United Broadcasting Network**
Take care. Congratulations. Thank you. You take care.

**[00:08:35] Del Bigtree**
Well, it was certainly a wild ride. There was just. It was just me and two other people trying to put this show together every single week in this little shoebox. We're playing with props. We're seeing what worked. What did people care about? I think the first show had maybe a thousand people watching. Then it was a few thousand, then it was tens of thousands, and it just sort of grew and it looked something like this. Why am I wearing rubber gloves? Because we're going to talk about propaganda here in the United States of America, and it's going to get messy. Good morning, good afternoon, good evening. Wherever you are out there in this beautiful world, it's that time. How about we.

**[00:09:19] Del Bigtree**
All step out onto this very precarious Highwire and I mean a real Highwire. This is death defying talk. Without the safety net of consumer advertising, I'm always going to be doing topics that maybe are not covered the way you're used to in mainstream media. Now, no saline placebo has ever been involved in any of these vaccines. Do you realize how problematic this is? What you're going to watch is me interviewing people trying to get to the truth myself. That's what I believe journalism is. That's why I'm not afraid of any topic.

**[00:09:58] Bill Nye, The Science Guy**
To make a vaccine, scientists take the bug and modify it.

**[00:10:02] Del Bigtree**
How do we modify this little germ? A little bit of mercury, antifreeze, formaldehyde? See this oozing, disgusting mess? That's what your vaccine is. Here in California, citizens across this great state have been standing on the Highwire this week.

**[00:10:22] Robert Kennedy, HHS Secretary**
It is a crime to pass a law that will mandate this dangerous and risky pharmaceutical product to every one of your children.

**[00:10:32] Del Bigtree**
Today, I am filing this notice against our Secretary of Health and Human Services about our vaccine program. Show us the proof of the safety test. The vax hole of the week is. Who is it? Drum roll please. Let's see. Senator Richard Pan, Chelsea Clinton, Bill Nye the science guy, representative Adam Schiff, Piers Morgan, Australia doctor Paul Offit.

**[00:11:03] Paul Offit, MD**
Get out of here. Get the out of here!

**[00:11:06] Del Bigtree**
Get ready for this, folks. This is breaking. Upper respiratory and gastrointestinal infections were reported in about 55% and 40% of Vaccinees. I don't know how no one in the media is covering this. If I stop you on the street, you'll say, oh yeah, I don't trust pharma. What is it, though? When we say vaccines are like, oh no, I believe in vaccines. To get to the bottom of what this story was really about, I want to bring in our favorite reporter, our in-house reporter, Jefferey Jaxen.

**[00:11:35] Jefferey Jaxen, Investigative Reporter, The Jaxen Report**
This story is a train wreck. I haven't seen the media fawn over a study. That is speculation at best. This badly. Everyone in the science and ethics community is saying this is appalling. Ask the question why didn't we have this debate when glyphosate was being rolled out, when all these vaccines were being added to the schedule?

**[00:11:53] Del Bigtree**
How is it that thousands of people are gathered outside of a Capitol on the issue of vaccines, yet no one is reporting on this.

**[00:12:01] Jefferey Jaxen, Investigative Reporter, The Jaxen Report**
They're not going to report on this. This is too much for the narrative. This goes beyond safe and effective. This goes beyond 1 in 1,000,000.

**[00:12:09] Del Bigtree**
You are being lied to. Acellular pertussis vaccines fail to prevent infection and transmission in a nonhuman primate model for groups of baboons. In this study, all in contact with pertussis. Who is the real wolf in this story? The DTaP group by the Godfather of vaccines. Here it is, in his own words. Plotkin on vaccines.

**[00:12:35] Aaron Siri, Head Legal Counsel, ICAN**
You're okay with telling the parent that Dtap Tdap does not cause autism, even though the science isn't there yet to support that claim?

**[00:12:46] Dr. Stanley Ploktin, MD, World's Leading Authority on Vaccines**
Absolutely.

**[00:12:47] Aaron Siri, Head Legal Counsel, ICAN**
Did the clinical trials rule out that the vaccine causes autism?

**[00:12:53] Kathryn Edwards, World Leading Vaccinologist, "The Godmother of Vaccines"**
No. You badgered me into answering the question.

**[00:12:57] Dr. Peter Doshi, Associate Director, British Medical Journal**
All the scientists around the world, all the doctors that are now recognizing, oh, snap. I'm on the wrong side of history.

**[00:13:06] Dr. Rachael Ross, MD, PHD, Former Host, The Doctors**
I didn't realize how many physicians aren't telling the truth. You know, they're giving shot schedules that they're not even using on their own kids.

**[00:13:13] Dr. Sherri Tenpenny, DC, www.masteringvaccineinfo.com**
I kept reading more studies and more studies, thinking that sooner or later I would find something that made sense, something that was really true science.

**[00:13:22] Dr. Jim Meehan, MD, Internist**
We're all being silenced and we're all just trying to be good scientists, good citizens, trying to, you know, bring some light and shed some light on an industry that is too powerful to wealthy and too likely to continue using tobacco science

**[00:13:37] Dr. Paul Thomas, Pediatrician, Author, "The Vaccine Friendly Plan,"**
3345 patients born into my practice in the last ten and a half years, there were 715 with zero vaccines unvaccinated. Out of those, 3345, one case of autism.

**[00:13:52] James Neuenschwander, MD, Board-Certified in Emergency & Integrative Medicine, President, Medical Academy of Pediatric Special Needs**
If we don't change the course of where we're at right now, we will have nothing but chronically ill children and adults.

**[00:13:59] Del Bigtree**
Finally, a doctor that is willing to tell the truth willing to put it on the line. Is it possible that we had less autoimmune disease when we were more often in contact with tuberculosis?

**[00:14:11] Denise Faustman, Director of Immunobiology, Massachusetts Hospital**
Absolutely. If you get tuberculosis before the age of 12, you do not get multiple sclerosis. You don't get type one diabetes.

**[00:14:19] Del Bigtree**
Did you support the HPV vaccine?

**[00:14:21] Dr. Sin Lee, MD, Pathologist**
No. At the very beginning, I thought it was unnecessary thing. If any woman develop cervical cancer in the United States under Regular gynecological care is practically a potential malpractice suit.

**[00:14:36] Dr. Suzanne Humphries, MD, DrSuzanne.net**
They found that there was a 20 times higher rate of autism in those children who were vaccinated and given fever reducers.

**[00:14:44] JB Handley, Author, How to End the Autism Epidemic**
We have 54% of children with chronic illness. We have 15 to 20% of children in special education in schools, and we are offering up a pretty plausible explanation for the primary, not singular, primary trigger of all those epidemics.

**[00:14:58] Jorge Araujo, Former Lead Supervisor, Vaccine Sterile Quality Operations, Merck, 1997-2004**
How do we know vaccines are safe? What do we do to determine their safety? These are basic questions. And what I'm suggesting is that while I was at Merck, the answers that come back are superficial. And that's usually code for, I don't know. That's disturbing to me.

**[00:15:13] Dr. Andy Wakefield, Director, Vaxxed, From Cover Up to Catastrophe**
I was trained in medicine to listen and to act upon what I hear. And. And that was my duty. And so here was a mother with a compelling story, desperately seeking help for her child. And I was in a position potentially to do something to help and to, to walk away from her and say, no, I'm not going to do it. It's not the way I was trained to practice medicine.

**[00:15:32] Del Bigtree**
One lawsuits against the National Institute of Health, Health and Human Services and the FDA. You should try. By the way, winning lawsuits against government agencies using misinformation. You can't do it. Well, it went all the way to court, and they decided to settle. They settled with something called this is a court ordered stipulation. We have HHS admitting right here, as we have been telling and reporting to you over and over since the beginning of The HighWire, HHS has shirked its duty to make your vaccine safer, meaning no one is doing the safety testing.

**[00:16:08] Robert Kennedy, HHS Secretary**
Really, del, what it shows is the the lackadaisical, the cavalier, the casual attitude I j towards vaccine safety.

**[00:16:19] Female News Correspondent**
A multibillion dollar verdict tonight for a husband and wife from Livermore. They say the weed killer roundup gave them cancer.

**[00:16:27] Brent Wisner, Co-Lead Trial Counsel, Pilliod vs Monsanto**
Mr. and Mrs. Pilliod, who both contracted the same type of non-Hodgkin's lymphoma after spraying glyphosate and roundup for over 30 years. They the jury awarded $2 billion verdict against them. A life changing event and more importantly, I get to see in real time how this litigation that we're doing is making a real difference.

**[00:16:49] Del Bigtree**
Live from Washington, DC. We are live from Israel. We are here in Lisbon, Portugal. Seattle, Washington, the capital in Mississippi. The Big Apple. Acapulco, Mexico. In Atlanta, Georgia. Home of the CDC. Down in Mexico. An incredible conference discussing the dangers of aluminum.

**[00:17:11] Prof. Christopher Exley, PhD, Aluminum Expert**
Why did this become an epiphany for me in terms of aluminum and autism, was simply because we measured some of the highest values of brain aluminum ever measured.

**[00:17:28] Male Speaker**
I'm the one that looks in his eyes when he's trapped in that, that prism of, of the spectrum of autism looking at me and he looks at me and I see it like, hey, pop, I know how to get out of here. What do I do? And the one thing that I will not do is tell him, son, I'm too much of a chicken to tell your story.

**[00:17:48] Male Speaker**
He started having seizures, like, 10 or 15 years ago. He's broken bones, collarbone, teeth.

**[00:17:54] Female Speaker**
What caused his injury was repeated vaccination.

**[00:17:58] Male Speaker**
If someone had talked to me when I was, you know, with Brandon for 18 months, and it told me all the things that I know now, I would try to avoid every vaccine I could.

**[00:18:09] Female Speaker**
Two needles, just two pokes and 36 hours. And her body and her brain were shutting down in front of me, and I just didn't know it.

**[00:18:25] Del Bigtree**
Bobby, I want to thank you for coming in.

**[00:18:29] Jenny McCarthy**
The first thing I did was Oprah, and it was pretty fantastic. You know, Oprah said to me, which I don't think I told many people, but just before we went live, she said, I just wanted you to know something. We've been trying to do the show for ten years. We've been getting letters, and I said, we have to wait until somebody tells the story. And you finally told the story and we have to do the show live, because otherwise I'll be prevented from doing it.

**[00:18:52] Taylor Winterstein, Integrative Nutritional Health Coach, www.tayswaymovement.com.au**
It is getting to be very scary in Australia, but at the same time, it's very exciting because a lot of people are asking questions. A lot of people are coming out now. A lot of people are being brave, as you always say, to really speak about what's happened to their children and, and the whole thing that with the hashtag do the study is we want to know, like, give us the proof.

**[00:19:09] Del Bigtree**
I want to show you the video that the World Health Organization put out four days before hosting the vaccine safety summit.

**[00:19:19] Dr. Soumya Swaminathan, Chief Scientist, World Health Organization**
Vaccines are very safe. If someone gets sick after vaccination, it is usually either a coincidence or very rarely a problem with the vaccine itself. That's why we have vaccine safety systems, robust vaccine safety systems.

**[00:19:35] Del Bigtree**
Four days after she just did a video saying it's the safest thing we do, you should absolutely believe in it and never question it behind closed doors in a room where she obviously forgot there was cameras. What did she say at this event? If you have food in your mouth, swallow it now because this is the whole kit and caboodle.

**[00:19:58] Dr. Soumya Swaminathan, Chief Scientist, World Health Organization**
We really don't have very good safety monitoring systems in many countries. We're not able to give clear cut answers when people ask questions about the deaths that have occurred due to particular vaccine.

**[00:20:09] Del Bigtree**
Am I allowed to say that this woman is lying? Can we say it?

**[00:20:13] Female Speaker**
One thing I give it to the industry I give to the industry is that they have amazing marketing PR let's make it socially unacceptable to say no to a vaccine.

**[00:20:21] Jenny McCarthy**
There's never been a time more than right now that we have to fight. We've got to fight with everything we've got.

**[00:20:33] Del Bigtree**
This is not just a fight in new Jersey. Today, you are fighting for the entire United States of America. What we're hearing is that there are between 1 and 2 votes short right now in the Senate.

**[00:20:50] Female Speaker**
Few minutes and you're going to know the outcome.

**[00:20:57] Del Bigtree**
There you have it. Victory is in the belly of the beast. We have won. This is our time. If not us, then who? If not now, then when? So now. This is the last time I'm sitting at this desk on this set. The Highwire studio in Los Angeles, California, we're packing everything up and we're moving down to Texas for many reasons. But we're getting bigger. We're expanding. We're growing. You have made all of that possible. So continue to be brave, continue to be bold and continue to step out with us on the Highwire. I'll see you on our new set.

**[00:21:48] Del Bigtree**
It's amazing. It's amazing to think all of that happened prior to 2020. In fact, you know, we were in California, we were doing our show in Los Angeles. And I said to my team, I have a really bad feeling about California. I have this deep, profound instinct. I have got to get out of here. I can't speak for the rest of you. You know, you have families. You have to make your decision. But I've got to get my family out of California. We started looking around the country and settled on Austin, Texas, partly because I'd made VAXXED here. I'd been traveling here and spent time here because Andy Wakefield lived here when we were working on VAXXED. And I remembered that. And luckily, amazingly, really, uh, my entire staff decided to, to join me in journeying to Texas. And so we all uprooted from California, came here to Texas. And now we sit in this incredible studio we're at right now. What an amazing growth. What an amazing journey you have been a part of that all along. Um, but from the very first episode, we were, you know, things were growing and there was one, uh, journalist that I ran into that first appeared on this show on the, I believe it was the eighth episode. And then we're like, wow, that was cool. Having somebody else come in from the outside. We tried it again on the 14th episode and then right around the 37th episode of The HighWire, we decided that it would be really great if every week I could say, you know what? It's time for the Jaxen report.

**[00:23:33] Del Bigtree**
Jefferey. It's pretty amazing, really. I can't really wrap my head around what a journey this has been.

**[00:23:41] Jefferey Jaxen, Investigative Reporter, The Jaxen Report**
Yeah. This is. It feels like a different lifetime. That long ago. It really does.

**[00:23:46] Del Bigtree**
Yeah. You know, I was trying to remember. When did we actually first meet? Like, I have this image of you of doing reporting at the same time SB 277 was going on. Of course, I'm making VAXXED and traveling, but when did we actually first meet?

**[00:24:01] Jefferey Jaxen, Investigative Reporter, The Jaxen Report**
Yeah, so that was 2016. I had started writing on this topic just a couple of years prior to VAXXED. And you were kicked out of Tribeca, and I was watching this and I saw, well, first of all, when I saw you come on the scene, I'm like, this guy's really slick in front of the camera. I'm like, I don't know if we can trust him. He's moving the ball too fast. I had a lot of that. I had a lot of people like, who are you?

**[00:24:21] Jefferey Jaxen, Investigative Reporter, The Jaxen Report**
So at that point, I'm like, this thing is a sensation. It's taking the ball further than anything I've ever seen in this space, in the short time in this space. And you went to Santa Monica for the VAXXED Premier. So I was in Oregon. I took a train down and watched. Watched the show for the first time, the documentary and I ducked out before the credits started rolling and the lights were down and I couldn't find the exit. And I'm like, well, this must be the door. So I open it and there's Polly, Tommy, you and Andrew Wakefield, and you went Jefferey. And I'd never met you before. And I went, hey, guys. And that was it. That was it.

**[00:24:52] Del Bigtree**
That was how it started. And you were you were forced then because we. I did know your name. You were one of the few people. I mean, it was a lonely world as a journalist that no one was going near the subject. So of course I knew who you were. You were like one of the 3 or 4 of us. Right. Reporting it all on SB 277. Given the perspective of of the parents that I had vaccine injured children and hadn't vaccinated their kids.

**[00:25:18] Jefferey Jaxen, Investigative Reporter, The Jaxen Report**
So it was career suicide. People don't understand that back then, the influencers weren't rushing to to throw a camera on themselves to talk about vaccines. It was you wouldn't touch with a ten foot pole. Yeah, yeah. So I want to talk about how far we've come.

**[00:25:30] Del Bigtree**
Okay, let's do that.

**[00:25:31] Jefferey Jaxen, Investigative Reporter, The Jaxen Report**
This is 500 episodes and maybe a lot of people are just woke up because of Covid or whatever the case, don't really understand what we came from in very short time. So I brought a poll here from 2014. This is smack dab in the middle of when this all started. And this is a Harris poll. And it says here over three fourths of Americans believe childhood vaccination should be mandatory. So it says that strong majorities of U.S. adults favor childhood vaccinations being mandatory for all children. That's 77%. Wow. Well, 7 in 10 don't think unvaccinated children should be allowed to attend either public or private school. So that's a little precursor to what we saw at Covid. So that ideology was already out there. That mindset was already out there. So think about that. Over three fourths of parents said, you know what? This pharmaceutical product that has liability, immunity, um, never really safety tested properly. We think all kids should have that. And if you don't get it, you should stay out of school. That was the mindset. And that was just kind of like, that was like breathing air back then. If you said something different, you were an anti-vaxxer. In fact, I brought some of the articles back then to give an idea of what it was like being a journalist or documentary filmmaker.

**[00:26:36] Jefferey Jaxen, Investigative Reporter, The Jaxen Report**
Here's New York Times 2015 title The Vaccine Lunacy. That's all it says. It's just you're a lunatic and it's all over the world. It's not just America. Here's Australia. Anti-vaxxers are free riders, not a persecuted minority. Anti-vaxxers are dangerous conspiracy theorists whose actions kill children. They don't deserve any support from our community. That's the title of the article. Wow. So they're just rolling off on this thing. And then, of course, the Disneyland outbreak, we covered that. You covered that quite a bit. Yeah. This is salon. They go off, this woman goes off on an op ed, she says, hi, Parents who don't vaccinate their children. Just thought you should know you are the worst. She goes on to call them crackpots. Uh, says that's a jerk move. Not not vaccinating your children. Basically trying to dehumanize them. But at the end, again, you see these these shadows of what happens during Covid, she said. If you feel very strongly about your children, again, 2015 not being vaccinated, then do the rest of us a favor. They really shouldn't go out to our theme parks and shopping malls and ball ball pits.

**[00:27:31] Jefferey Jaxen, Investigative Reporter, The Jaxen Report**
I mean, it's just for everybody's own good. And you can leave the happiest place on earth to the rest of us. That is what you faced. And there's a problem with that because as you and I both know so many others, there are parents with vaccine injured children who, because of those headlines, were shoved to the sidelines. They were neutralized. Their voices were never heard. And that's what started this show. That's what we were born in. And it really came to a fever pitch. It really hit the the low water mark in 2017. This is the Boston Herald. Their entire editorial staff. So when you see an entire editorial staff sign on to an article, That means they all sat down and said, this is a good idea. At the time Andrew Wakefield went to Minnesota, he gave a private gathering to people to talk about the vaccine safety around the measles vaccine, MMR vaccine. Well, the entire Boston Herald editorial staff said this. Of course, they go on to say these are the facts vaccines don't cause autism. Measles can kill. And lying to vulnerable people about the health and safety of their children ought to be a hanging offense.

**[00:28:29] Del Bigtree**
Wow.

**[00:28:30] Jefferey Jaxen, Investigative Reporter, The Jaxen Report**
So that's when it got really dangerous. And that's when we started. And we thought, this is getting this is getting violent. They're trying to hang people like Andrew Wakefield. They're calling for public hangings because he's talking to people about vaccine safety. Of course, during that time, you were labeled top anti-vaxxer. Okay, King of the anti-vaxxers. This is the Daily Beast here. Look at that nice little picture we got. And that's you at a rally spawned.

**[00:28:52] Del Bigtree**
I love that that was spawned. King of the anti-vaxxers. You got a ring to it.

**[00:28:58] Jefferey Jaxen, Investigative Reporter, The Jaxen Report**
So, so. And as we all know, Covid hit And it was probably, I mean, how do you put that into words, into a sound bite here? It was probably the most transformative, traumatic event in any of our lifetimes. And it woke people up more than any of us could ever do individually. And people now focus and question the science. They question public health. They question the government's role in mandating products. And after Covid, something really interesting happened. I don't think we could ever have imagined and remember Stanley Plotkin, that guy, we showed that Aaron was deposing the godfather of vaccines. Well, he went to the New England Journal of Medicine and wrote this. He said, maybe we should fund vaccine safety science. He started to sound like us, and I couldn't we couldn't believe that. And you go into this, you go into this, and it's really wordy. But he's basically saying the public's not satisfied with our traditional safety studies anymore. Well, of course not. And he said the public wants health authorities to mitigate and prevent rare but serious adverse reactions. But then, he admits, which are no longer rare when vaccines are given to millions and billions of people.

**[00:30:00] Jefferey Jaxen, Investigative Reporter, The Jaxen Report**
So he admits it right there. He's like, you know what? These people have something. They're on to something, and I'm going to sign my name to this. But then he goes on to say this. We should study it. But he said, currently the United States ACip only the only statutory resource they allocate, the only money they give is to vaccines for children and the Vaccine Injury compensation program, and that's it. He said there currently, no, there's no resources earmarked for this, but we need to find resources to study this. Well, isn't it interesting, because it's exactly what Kennedy is doing, is studying this and trying to study this. So he's aligned with Stanley Plotkin. So everything should be okay, right? Yeah. And finally here, I just want to end with this. We have our lawyer at ICAN, Aaron Siri. He was written up here in rolling Stone. And I read this article and it sounds like they're talking about a superhero. And I don't know if this is supposed to be a hit piece, but it talks about the front lines.

**[00:30:47] Del Bigtree**
Let me just state, because people are going to look. It clearly is a hit piece.

**[00:30:51] Jefferey Jaxen, Investigative Reporter, The Jaxen Report**
Yeah.

**[00:30:51] Del Bigtree**
But the way they describe Aaron is like superhero, like for sure.

**[00:30:56] Jefferey Jaxen, Investigative Reporter, The Jaxen Report**
Yeah, clearly. And as a writer, I'm reading this going, I don't know if this guy thought this through or whoever wrote this. So the front line of the vaccine wars, that's what we're in right now, apparently. And it says on a crisp day in Beckley, West Virginia, last September, 35 year old litigator Chris Smith. He is going basically against Aaron Siri. So Chris Smith wore his lucky purple tie to court. But as he slid into his seat for defense for defense counsel in a courtroom crowded with lawyers, luck did not seem to be on his side. Then it goes on to say, a lawyer now seated to Smith's right, Aaron Siri, bald and compact, with lively dark eyes, look ready to spar. It's a heck of a hit piece from 2015, and it finally says Smith, remember, Smith is coming in to fight.

**[00:31:36] Del Bigtree**
Back by pharma. Let's remember this is the guy backed by pharma, who has held the position that the entire country agrees with. And then under those contexts, read that paragraph.

**[00:31:45] Jefferey Jaxen, Investigative Reporter, The Jaxen Report**
Yeah, yeah, yeah. And ten years ago would be rubber stamping wins in the court. Now, Smith assumed loss was inevitable and shaped his strategy to create the best record we could appeal, as he recalls, with the only outstanding question being how long the death march was going to be. So now these because of Aaron, because of all the work everyone's been doing, these lawyers are walking into a death march in court because they know they can't win. It shifted that far. And as we started with these polls, here's the most recent poll. Remember, over 77%, 77% saying of parents saying kids should have vaccines, shut them out of society without that. Now here we are, 2026/40 6%. 46% of poll respondents said facts on vaccines are still up for debate, and it is damaging to enforce their uptake. Incredible 44% of polled adults said they believe vaccines should be mandatory for children to attend school, so we went from about 77% to about 44% there.

**[00:32:42] Del Bigtree**
Now in the minority there.

**[00:32:43] Jefferey Jaxen, Investigative Reporter, The Jaxen Report**
Now in the minority.

**[00:32:44] Del Bigtree**
That position is now in the minority. What an incredible, incredible thing.

**[00:32:49] Jefferey Jaxen, Investigative Reporter, The Jaxen Report**
What a journey.

**[00:32:50] JB Handley, Author, How to End the Autism Epidemic**
What a journey.

**[00:32:51] Del Bigtree**
Really amazing journey. And and Jefferey, You know, you've been astounding through this, you know, breaking stories. And now, of course, we are getting way outside of just discussing vaccines, so many things affecting the world today, whether it's AI and data centers. World War three looks like it may be on the horizon, something we're going to keep our eyes on glyphosate, you know, pesticides, all of it. So it's just it's been amazing to be on this ride with you. Jefferey. Yeah. And I don't think we'd be here without you.

**[00:33:26] Jefferey Jaxen, Investigative Reporter, The Jaxen Report**
Thank you. And I sitting here, I don't know what to say. Like you have been the fuel that propelled this movement so far beyond, I think, what it could have been. And I think a lot of parents and myself, we thank you for it.

**[00:33:37] Del Bigtree**
So thank you very much. I love you, brother. Thank you.

**[00:33:41] Del Bigtree**
I forgot to mention what an amazing show we have. We've got an amazing guest, a secret guest that's going to be in studio here in just a little bit. Maybe even two guests. Rebels in Hollywood. I'm really excited to decide to be a part of our 500th episode. But when you think about that journey, what did Covid actually do? I remember, you know, when, when Covid hit, we had The HighWire had been up since 2017, so roughly three years. Our viewership was around 250,000 viewers or so. And then suddenly Covid hit and it was like we were psychics. In fact, I was just doing a podcast yesterday with Jeffrey Tucker on his podcast. He's doing amazing stuff, reading through the, the open, um, v safe entries that they've turned into a book. And, and I said, you know, Covid didn't surprise us. We knew what was going to happen because we'd spent three years studying how our government covers up the truth and the childhood vaccine program. So we knew how we were going to handle, you know, putting a camera, a microscope, a view. I want to say to you, like, we really sat down as a team. Remember this Jefferey? And I said, this is the moment we've been waiting for. It's always been about the kids, but the kids can't speak to themselves. They're about to rush a vaccine on the market, and they're going to give it to adults, which means adults that were jogging and were healthy. And we're lawyers and we're doctors will suddenly be being injured, and we are going to make sure those stories get told. And this is going to change everything. And sure enough, it did. And it looked something like this.

**[00:35:17] Female News Correspondent**
A SARS like virus, which has infected hundreds in China, has now reached the United States.

**[00:35:23] Male News Correspondent**
The first confirmed U.S. case now in Washington state.

**[00:35:26] Male News Correspondent**
Second case, a woman in Chicago.

**[00:35:28] Male News Correspondent**
Third case, Orange County, Arizona.

**[00:35:31] Male News Correspondent**
It killed at least 81 people in China.

**[00:35:33] Male News Correspondent**
We don't know just how deadly this is.

**[00:35:36] Del Bigtree**
I personally am not afraid of Covid 19. This is the spike we're looking at in Italy. You go back to 2017. Clearly this spike right here went way above the line. Is this that dangerous a virus?

**[00:35:51] Donald Trump, 45th & 47th President of the United States of America**
This is a global pandemic.

**[00:35:53] Female News Correspondent**
Schools in entire. Cities and states have been ordered closed.

**[00:35:56] Female News Correspondent**
The CDC says social distancing is imperative.

**[00:35:59] Del Bigtree**
A 14 year old girl came up with social distancing as a part of a science project.

**[00:36:06] Robert Redfield, Former Director CDC**
These face masks are the most important, powerful public health tool we have.

**[00:36:12] Del Bigtree**
How in any way is that protecting my neighbor?

**[00:36:16] Tammy Clark, OSHA Environmental Health & Safety Specialist**
We have a director of OSHA saying using surgical masks as a form of personal protective equipment may lead to adverse health effects. Boom.

**[00:36:24] Del Bigtree**
This is my son, Evere. Okay. This measures the amount of CO2. Look at this. We've just passed 5000. Now we're in the toxic level. Right now, we could be doing 7000. This thing has gone off the Richter scale, folks.

**[00:36:36] Denis Rancourt, PHD, Former Professor of Physics at the University of Ottawa**
If there was any advantage using a mask, it would have shown up in one of these very reliable trials.

**[00:36:42] Del Bigtree**
If you're 0 to 19 you have a 99.997% success rate 70 plus, they have on average two and a half. Other life threatening illnesses.

**[00:36:52] Darren Beattie, www.revolver.news**
The Covid lockdowns amount to the greatest public policy blunder in our nation's history.

**[00:36:59] Tony Rogers, Political Economist**
Health impacts of the lockdown have been catastrophic.

**[00:37:02] Reinette Senum, Mayor, Nevada City, CA**
All they're doing is hearing 24 over seven. Be afraid, be afraid, be afraid.

**[00:37:06] Dr. Daniel Erickson, MD, C.O.O. Accelerated Urgent Care**
I called the CEOs of the local hospitals and they said, our volume is down. They've had to cut hours. Nobody's busy. Yesterday I checked and we had 14 people in the hospitals because of Covid. Out of a million people. These numbers are fairly low.

**[00:37:22] Del Bigtree**
Are these all really Covid 19 deaths?

**[00:37:26] Scott Jensen, M.D. Calling for an audit of Covid-19 Death Certificates**
If a hospital is able to reach the threshold of 161 Covid 19 admissions, they would receive $77,000 per admission on top of what they'd already been paid.

**[00:37:40] Heiko Schoning, M.D., Organized Berlin Lockdown protest attended by over one million people**
If you really go into the details, you see it's organized crime if you just follow the money.

**[00:37:46] Del Bigtree**
Earlier this week, there was an MD from New York saying.

**[00:37:50] Male Speaker**
These patients are slowly being starved of oxygen. I don't know the final answer of this disease, but I'm quite sure that a ventilator is not it. And I fear that this misguided treatment will lead to a tremendous amount of harm.

**[00:38:02] Del Bigtree**
We know that those ventilators killed nine out of ten people.

**[00:38:05] Female Speaker**
These people aren't dying from Covid. Nobody cares because they're all minorities and we're in the hood. The guy choked to death on his own blood. Covid didn't place that ET tube incorrectly.

**[00:38:21] Dr. David Brownstein, M.D. , The Center for Holistic Medicine**
Our therapies are working. We use a combination of oral vitamins and iodine. Then we're using IV, vitamin C and IV peroxide.

**[00:38:28] Del Bigtree**
Here is a scientist out of France. His name is Didier Raoult. He came out and basically said, it's time to party. This thing is over. Chloroquine brings a spectacular improvement. I'm joined now by Doctor Vladimir Zelenko.

**[00:38:42] Pierre Kory, MD, Founder, Front Line Covid-19 Critical Care Alliance, Expert in Treatment of COVID-19, Author, “The War on Ivermectin”**
Hydroxychloroquine is 65 years old and has been used by millions of people. Ivermectin it would be hard to design a drug better for this disease.

**[00:38:51] Female News Correspondent**
Ivermectin horse deworming medication for Covid.

**[00:38:55] Pierre Kory, MD, Founder, Front Line Covid-19 Critical Care Alliance, Expert in Treatment of COVID-19, Author, “The War on Ivermectin”**
They're literally killing people with this PR campaign to try to get the doctors to stop using it.

**[00:39:00] Bill Gates, Co-Chair, Bill & Melinda Gates Foundation**
Things won't go back to truly normal until we have a vaccine.

**[00:39:05] Del Bigtree**
The mythological beauty of this thing, this, this, this host that sits out there in the future is really a back seat unicorn. That's what we're waiting for. What happens if it looks more like this? Would you like to have the ability to opt out?

**[00:39:24] Dr. Peter Hotez, Texas Children's Hospital Center for Vaccine Development , Co-Director**
One of the things that we're not hearing a lot about is the unique potential safety problem of coronavirus vaccines. You get this immune enhancement phenomenon.

**[00:39:33] Del Bigtree**
When we saw the emergency use authorization, they said risk of vaccine enhanced disease remains unknown. You're seeing how reckless the FDA is.

**[00:39:41] Richard Mack, Constitutional Sheriff**
I want to be careful and I want to fight Covid, but I don't want to do it from my knees while I'm being destroyed by my own government.

**[00:39:48] Richard Bartlett, MD, Developed Budesonide Protocol for COVID-19 That saved countless lives worldwide**
We're helpless. We're hopeless. Stay paralyzed, waiting for Anthony Fauci to tell us that we have a vaccine to Covid.

**[00:39:56] Donald Trump, 45th & 47th President of the United States of America**
Under Operation Warp Speed, my administration is developing a vaccine in record time.

**[00:40:01] Simone Gold, Emergency Physician & Attorney**
It is irrational to take an untested, unproven medication shielded from liability.

**[00:40:08] Mikki Willis, Director, Plandemic Series**
I do believe that the pandemic has been manufactured and leveraged for political purposes, and for the gain of more power and control over our lives.

**[00:40:15] Female Speaker**
When you get into the realm of Big Pharma and all the rest of it, all that money, all the power players.

**[00:40:20] Male Speaker**
We must confront misinformation as a nation.

**[00:40:22] Del Bigtree**
Yesterday, our YouTube channel was deleted. Facebook finally deleted our page. I want to say to Pharma and the dark powers, we are still here.

**[00:40:37] Jefferey Jaxen, Investigative Reporter, The Jaxen Report**
The big news this week we knew it was going to happen.

**[00:40:39] Male News Correspondent**
The FDA giving full approval to Pfizer's vaccine.

**[00:40:43] Anthony Fauci**
It wasn't rushed.

**[00:40:44] Del Bigtree**
I believe in this vaccine despite any scientific evidence that it works. The unvaccinated are faring better. This right here is the bone.

**[00:40:58] Female News Correspondent**
A rare heart issue cropping up in young people following Covid vaccinations.

**[00:41:03] Peter McCullough, MD, MPH, Internist, Cardiologist & Epidemiologist**
The vaccine manufacturers knew this rich history that this was going to cause heart damage. Myocarditis can lead to a scar. The electricity goes down through the scar. It degenerates to ventricular fibrillation. And then we're gone.

**[00:41:16] President Joe Biden, 46th President of the United States**
My message to unvaccinated Americans is this what more is there to wait for?

**[00:41:21] Del Bigtree**
I'm waiting for you to explain this. 14,506 reported deaths, 58,000 hospitalizations.

**[00:41:28] Female News Correspondent**
A high school basketball player is in the hospital tonight, struggling with three blood clots in and near his brain.

**[00:41:34] Female Speaker**
There was very little Willingness to entertain that my son's condition was related to the shot.

**[00:41:42] Male Speaker**
That was one giant clot that came out of a vaccinated woman. It just takes that much of a blockage in a medium sized vessel to now get a heart attack. You get a stroke.

**[00:41:52] Del Bigtree**
Turbo cancer. What does that mean?

**[00:41:55] William Makis**
Aggressive cancers that are arising in Covid, vaccinated individuals.

**[00:42:00] Female Speaker**
I was very pressured by my employer to get the vaccine. The next day I was in full body convulsions.

**[00:42:06] Female Speaker**
I took the Pfizer. And then Saturday morning I got up and I could not use either of my legs.

**[00:42:11] Female Speaker**
Doctor there just told me I was clearly having a panic attack.

**[00:42:15] Female Speaker**
They're saying is no soldier is left behind. Well, I feel like we were all soldiers and we took one for the country and we are completely being left behind.

**[00:42:27] Brianne Dressen, Co-Chair, React 19, react19.org/study**
There's tens of thousands of us that have found each other, and that's with the censorship, with the oppression, with the silencing that's going on.

**[00:42:36] Geert Vanden Bossche, PHD, DVM, Vaccine & Global Health Expert**
Mass vaccination has generated an excellent breeding ground for these more infectious variants, so that now their propagation has exploded.

**[00:42:47] Female News Correspondent**
The highly contagious delta variant now confirmed in every state in the country.

**[00:42:52] Del Bigtree**
This vaccine is bullying away your remaining natural immune system. Do you realize how horrifying this is?

**[00:42:59] Robert Malone, mRNA Vaccine Pioneer, Immunologist, Molecular Virologist, Vaccinologist, Pathologist & Physician**
The vaccines are not working. They're driving it even further. Got to stop the vaccine.

**[00:43:05] Del Bigtree**
Said from the man who invented the technology being used as vaccines. I think we should take that.

**[00:43:09] Alan M. Dershowitz, ESQ. Support Mandatory Covid-19 Vaccine**
If the vaccine is safe, you have no choice.

**[00:43:12] Del Bigtree**
We look at pharmaceutical products. Those are tested using a double blind, inert placebo study. That's something that most of these vaccine trials are not doing.

**[00:43:22] Alan M. Dershowitz, ESQ. Support Mandatory Covid-19 Vaccine**
You do have a right to demand of your country that they follow the scientific method.

**[00:43:27] Del Bigtree**
Scientific method died here. And this is the point. I want to make my point. It died a death here, and I need you to help me save it, because Doctor Peter McCullough is the leading cardiologist.

**[00:43:38] Neil DeGrasse Tyson**
If titles don't matter here.

**[00:43:39] Del Bigtree**
But what should matter? Matter what should matter?

**[00:43:43] Neil DeGrasse Tyson**
Consensus.

**[00:43:43] Del Bigtree**
What should matter was that the consensus. All these people have been censored. They were shut down.

**[00:43:48] Sabine Hasan**
I'm banned from Facebook and Instagram on all my pages.

**[00:43:50] Ron Johnson, (R) United States Senator from Wisconsin**
Let me look right in the camera and make my appeal to doctors. If you're a doctor, we literally need thousands of doctors to join together. There is safety in numbers and be honest and truthful with the American public.

**[00:44:04] Male Speaker**
I think there's an alternative system emerging. I think there's now a body of people who are become enlightened. The truth is on our side. Which side do you want to be on? The losing side or the winning side?

**[00:44:17] Crowd of People**
Say New York, New York, New York.

**[00:44:22] Joseph Ladapo, Florida Surgeon General**
I feel that this story has a happy ending, and if it's the end of times, it will be the end of bad times for you.

**[00:44:34] Del Bigtree**
I told you we were gonna throw a party. Is this a party.

**[00:44:38] Five Times August, "Fight For You"**
In the back on the field? There is evil on the move.

**[00:44:45] Ernest Ramirez, 16 year old died after receiving the Pfizer Vaccine**
He collapsed and died right in front of his best friend.

**[00:44:48] Female Speaker**
The media and government are trying to cover up the thousands upon thousands of stories just like mine.

**[00:44:56] Hi-Rez and Jimmy Levy, "Welcome to the Revolution"**
You will not comply. We will not comply.

**[00:45:00] Russel Brand**
A milieu that I've come to recognize as defining our times. Control masked as care. Convenience to elicit yet further control.

**[00:45:09] Alex Jones**
I've just been like randomly in the dark. Like punching buttons. Trying to figure out how to stop these people. I've made a bunch of mistakes. I'm not perfect, but I believe in humanity.

**[00:45:17] Male Speaker**
The only thing in history that has actually limited the power of government is when the people reach the limit of their obedience.

**[00:45:24] Del Bigtree**
Where America's public health watchdog. If you are lying to the public, we're going to get to the bottom of it.

**[00:45:30] Aaron Siri, Head Legal Counsel, ICAN**
The CDC finally handed over the V-safe data.

**[00:45:33] Del Bigtree**
And we built a dashboard for all of the world to use this data.

**[00:45:37] Aaron Siri, Head Legal Counsel, ICAN**
There were 10 million users. 7.7% of these users needed some type of medical care seeing a doctor, emergency room, or hospitalization.

**[00:45:46] Del Bigtree**
We stand beside you. We will continue to bring lawsuits. The FDA tried to block the Pfizer data for 75 years. Aaron Siri won in the court. All of that information has been dumping into our laps.

**[00:45:59] Aaron Siri, Head Legal Counsel, ICAN**
The purpose of the Freedom of Information Act is so that we can have transparency as to what our government is doing. The government that we pay for, the people who work for us.

**[00:46:11] Naomi Wolf, Author, The Pfizer Papers**
It's a celebration for ICAN because if it weren't for you all, none of us would know how to begin to heal.

**[00:46:18] Sen. Rand Paul, MD. Chair, Committee on Homeland Security & Governmental Affairs (R-KY)**
There was an enormous cover up in our government. They knew if they had funded this, they would bear some responsibility for the pandemic.

**[00:46:25] Jim Breuer, Stand Up Comedian and Actor**
Before Covid. Now many people questioned Hollywood or news that pendulum is now flopping across the whole world.

**[00:46:34] Rosanne Barr**
When nothing is sacred. It's kind of like everything is.

**[00:46:38] Del Bigtree**
We've got stars and heavyweights that are going to be walking down this red carpet right behind us. The energy here is electric.

**[00:46:45] Jefferey Jaxen, Investigative Reporter, The Jaxen Report**
We're not just trying to end man made disease. We're also looking at what's in the skies.

**[00:46:49] Catherine Ybarra, ESQ. Attorney, Siri & Glimstad**
We're looking at all aspects of aerosolized environmental pollutants and toxins.

**[00:46:55] Female News Correspondent**
There is a link between higher levels of fluoride exposure and lower IQ in kids.

**[00:47:00] Jefferey Jaxen, Investigative Reporter, The Jaxen Report**
I'm here with the attorney, Michael Connett. You were able to depose one of the specialists at the NSF here.

**[00:47:06] Michael Connett, Attorney, Siri & Glimstead**
I had the opportunity to ask these organizations. Can you point me to any study that shows that water fluoridation is safe? And every single one of those organizations came back and said no.

**[00:47:17] Vani Hari, Food Activist, Author & Speaker, Founder, Truman, Blog: FoodBabe.com**
This box of Froot Loops contains four different artificial food dyes. We have over 400,000 petitions delivered to Kellogg's today. Let us in. You cannot turn your back on this many voices.

**[00:47:33] Zen Honeycutt, Founding Executive Director, Moms Across America**
Our food is incredibly toxic. 95.3% positive for glyphosate in our school lunches. And this is a known carcinogen, as you have reported, an endocrine disruptor.

**[00:47:43] Crowd of People**
People versus poison.

**[00:47:45] Vani Hari, Food Activist, Author & Speaker, Founder, Truman, Blog: FoodBabe.com**
Corporations like Monsanto do not get immunity for causing cancer.

**[00:47:50] Barbara Loe Fisher**
Back then, you could go right in front of the white House and demonstrate. My name is Barbara Loe Fisher. There's a lot of myth that has grown up around that 1986 National Childhood Vaccine Injury Act. So I welcome the opportunity to set the record straight.

**[00:48:03] Rob Schnedier**
Government can't make decisions on what I do to my body and my children's body today. Doctors. I don't think it is intentional harm. I just think it's the way that they're trained.

**[00:48:14] Del Bigtree**
For so many millions of families around the world that have dealt with autism, what you are about to see comes as close to a miracle as anything we can imagine.

**[00:48:25] Female Speaker**
These kids finally have a voice.

**[00:48:27] Male Speaker**
Presume competence always, and know that our bodies don't always listen to us.

**[00:48:31] Male Speaker**
Somebody's going to watch this one day. Who thinks their son or daughter can't do it? And now, like. I just want to get home and talk to him.

**[00:48:42] Del Bigtree**
You would imagine a story like this should be on CNN, on MSNBC, on Fox.

**[00:48:48] Female Speaker**
It's not my job as a journalist to figure out how people are going to process the truth and therefore withhold the truth from them.

**[00:48:55] Brett Weinstein, PHD, Evolutionary Biologist & Host of Dark Horse Podcast**
I was shocked to discover the level at which the safety work simply had not been done.

**[00:49:03] Dr. Suzanne Humphries, MD, DrSuzanne.net**
We go injecting viruses, particles, bacterial particles along with adjuvants and things that cause inflammation. It's inherent that we're going to have autoimmune reactions.

**[00:49:12] Ron Johnson, (R) United States Senator from Wisconsin**
I would ask that we enter into the record the study impact of Childhood vaccination on short and long term chronic health outcomes in children. The documentary is being prepared by the The Informed Consent Action Network. Today, we're proud to present the world premiere of An Inconvenient Study.

**[00:49:31] Peter McCullough, MD, MPH, Internist, Cardiologist & Epidemiologist**
This could be one of the most valuable studies in the field.

**[00:49:34] Del Bigtree**
4.47 times the amount of speech disorders.

**[00:49:37] Dr. Paul Thomas, Pediatrician, Author, "The Vaccine Friendly Plan,"**
Learning issues.Speaker 119: Developmental delays

**[00:49:38] Female Speaker**
over four times more likely to have an asthma diagnosis.

**[00:49:43] Del Bigtree**
Only one problem. They're not going to publish it. I'm going to bring hidden cameras. What do you think about the study? You guys have done?

**[00:49:49] Marcus J. Zervos, MD,**
I think it's a good study. Publishing something like that. I'd be finished.

**[00:49:53] Male Speaker**
I was moved to tears.

**[00:49:58] Male Speaker**
Just a festival an inconvenient study.

**[00:50:04] Female Speaker**
Best investigative journalism. An inconvenient study. Audience choice. An inconvenient study.

**[00:50:09] Del Bigtree**
I've been traveling Europe with our film An Inconvenient Study.

**[00:50:14] Male Speaker**
We have, like, 50 different theaters screening the movie at the same time.

**[00:50:20] Joel Salatin, Farmer, Owner/Operator, Polyface Farms**
The human experience is generally not one of good earth stewardship. Let's roll up our sleeves and say, okay, we heard it. Now can we become healers?

**[00:50:30] Ryland Engelhart, Co-Owner, Sovereignty Ranch, Co-Owner, Cafe Gratitude**
You get to play an active role in our healing.

**[00:50:33] Ron Johnson, (R) United States Senator from Wisconsin**
I see Del Bigtree here who's done so much fabulous work.

**[00:50:36] Male Speaker**
We need a skeptical, indignant media.

**[00:50:40] Barbara Loe Fisher**
You came in and filled a void and created The HighWire.

**[00:50:44] Joseph Ladapo, Florida Surgeon General**
Thank you, of course, for all the work that you do and your consistency with pursuing truth.

**[00:50:48] Vani Hari, Food Activist, Author & Speaker, Founder, Truman, Blog: FoodBabe.com**
You should be earning medals for the reporting that you've done over the years.

**[00:50:52] Ian Somerhalder, Actor**
Thank you for spending your time in life sharing these huge messages, like you do with all of us, and inspiring the heck out of us to keep going.

**[00:51:01] Male Speaker**
ICAN the work you're doing is absolutely remarkable.

**[00:51:04] Jenny McCarthy**
You guys are going to deserve those Nobel Peace prizes because you are doing the greatest gift to humanity.

**[00:51:10] Del Bigtree**
Those of you that have been supporting us have made these great moments in history possible. This is the 100th, 200, 300 400th episode. I want to thank all of you. Keep watching the HighWire. We got big things to do. I'll see you next week. I'll see you next week on The HighWire. It's really amazing. It's amazing having, you know, the community in the room with me. I get to do this alone all the time, but to feel your energy and watching all of the things that we've been through, it just reminds me that this show is really about you. It's not about us. It's not about the people that put the show together. This is about the people in America and the people around the world that simply want to have sovereignty, want to have dominion over their bodies and over their families and their children, something that is, I think, a universal truth and something represented in, you know, our Constitution. We are endowed with these rights by God, and somehow we've lost our way. And as I was watching that, I was thinking about the fact that several years ago as being interviewed by a journalist, at some point she just lashed out at me. She said, you're not a journalist, you're an activist. And I remember thinking about it for a minute. And I guess, you know, I thought, well, whatever you call me, um, you know, I'm reporting on the truth.

**[00:52:44] Del Bigtree**
But you're right. I don't just sit back and complain about what's happening in the world. If we see an avenue that we can do something about it that we then we get involved. And I remember, you know, reflecting on how I got here, um, some of the people that make this show every day, we were all on the doctors television show together at CBS when, uh, the, the earthquake happened in Haiti. And it was one of the amazing, really one of those transformational moments in my life where we got to go as producers to To produce several shows right in the middle of Haiti. And at one point, like we were as producers, getting sent off in different directions to tell different stories. And I was up in the mountains where there was a, you know, one military guy trying to set up a tent and there's people lined up waiting, you know, bleeding that the buildings had fallen on them, kids with broken arms. And I'm supposed to be shooting it. And, you know, the wind is blowing, the guy can't get the tent. And I was like, you know what? Screw it. And I just threw the camera down and I grabbed the tent and I helped the guy and we built the tent. I started helping bringing in the kids. And at the end of the day, you know, my boss is like, so did you get it all on camera? I was like, no, I didn't get it on camera because we had lives to save.

**[00:53:55] Del Bigtree**
And they're like, Del, the entire purpose of being here is to shoot it on camera. I was like, that might be your purpose, but it wasn't mine today. And I think that, you know, one of the things that makes Highwire different is that is really what sort of is the pulse in everyone that makes this show. Sure, we want to report on it. Sure. It would be great to have a camera there, but what difference does any of that make if nothing changes? If all we do is sit and talk about it, then we're just another news show, which is really what value does that have? All that's doing is getting people to yell at each other, and it's one of the things I'm the most proud of in The Highwire is not just what we report on, but the changes that we actually make. We are not just a media institution that miraculously figured out how to tell news and broadcast news across social media channels. Ultimately, we take the bull by the horns, and that would not be possible without our legal team and the head of that legal team, Aaron Siri. He is such a huge part of this journey that we've been on. It's my honor and pleasure to be joined by him now.

**[00:55:05] Aaron Siri, Head Legal Counsel, ICAN**
Hey, Del, great to see you. Hey, everybody. Congratulations on the fifth 500th episode.

**[00:55:12] Del Bigtree**
It's really amazing. That means you've been at this for, uh, you know, just over 500 weeks too. We had just really gotten started on our work together, started this nonprofit when we thought we need a way for the public to hear about the lawsuits that, you know, you were bringing, that you were, you know, started winning pretty early on. Um, and, and luckily, Tony Sweet sort of said, hey, try podcasting. And the rest, as they say, is history. Now I know, you know, we said, Aaron, you got ten minutes. Take us through all that you've achieved as an attorney for ICAN. Uh, but you know, I always I'm always in here celebrating it. But when you look back, what are the what are the milestone moments as an attorney working for ICAN and on this journey, what are the ones that stand out to you?

**[00:56:03] Aaron Siri, Head Legal Counsel, ICAN**
Um, well, there's definitely a lot of individual milestone moments we could talk about. But you know, the I think when you step back and you look at where we were ten years ago, when it comes to this issue, when it comes to the issue of the individual and civil right, to be able to say, I don't want that product right. And where we are today, it is it's a completely different landscape legislatively. Um, how it works out in the courts and how and how people think about that issue in America. I think we've gone from single digits, low single digits that that don't think there should be mandates to now over 30% of folks. And, you know, that's creeping up. So we've come a long way in that regard. Um, in terms of specific milestones, that was a tough list to put together. But, um, I think one of the first things we did is we had that letter exchange with the HHS, with the federal health authorities where we, uh, sent the letter on behalf of millions, you know, ICAN went and in true ICAN style, you know, got together 55 other organizations which collectively had millions of members and said, hey, HHS, can you respond to these very simple questions like, why do you not license clinical vaccines based on proper clinical trials? Right. And they went and they responded. And in fact, we know from later FOIA requests that they actually went and asked all of the agencies, FDA, CDC, and so forth to all sign off on the letter.

**[00:57:32] Aaron Siri, Head Legal Counsel, ICAN**
So we got like the full, you know, best response they could. And man, it was not, it wasn't good. And we sent them back a very long letter detailing the problems and asking them for another response. They had nothing. I can turn that into a book. And I really see that letter that that that letter exchange is almost kind of the it laid the groundwork. It laid the foundation for helping, uh, you know, folks in this country see the bigger problems. There was a lot of talk about, you know, thimerosal at that point and 1 or 2, uh, injuries caused by the products, but people weren't talking about the clinical trials. People weren't talking about the lack of liability. Uh. Uh, you know, people weren't talking about all of the post-licensure safety issues, the safety surveillance problems, the civil rights, you know, go down the list. And I think that letter exchange really brought those issues to the fore. And, you know, one of the things I loved is that we took I took thousands and thousands of copies and mailed it to, like every single scientist, public health official at CDC, NIH, and then also at the state agencies and to and to representatives, you know, really got it out there. I remember some of them sent it back with like, I refuse to read this, which means we're opening them. And I remember what we did is we sent them back another copy, right.

**[00:58:50] Del Bigtree**
You know, and in ways I've used that in Aaron, the ways I've used that book, a really great example is when Doctor Peter McCullough came on the very first time onto The HighWire to talk about the issues with the Covid vaccine. He was clear on the myocarditis pericarditis, but he was still holding this position, especially off camera, where he didn't want this to really interrupt with the childhood vaccine program. And I grabbed that book. I said, you know, Peter, I want to appreciate the work that you've done. Thank you for joining us on this Covid issue. But this book lays out all of the problems. This is our interaction with HHS. Look at what they admit to. Look at the gaps in the science here. Take a look at this. Before you, you know, go out and say publicly that the childhood vaccine program is okay. I don't know if that is the book that like shifted him forever, but we see where he's at now. And that book is one of those gifts I give to all the doctors that were coming in during Covid to say, you may want to take a look at the childhood vaccine program, too. So it was a powerful tool.

**[00:59:49] Aaron Siri, Head Legal Counsel, ICAN**
It's powerful, I think, in particular, because it's not just a one sided letter. You get to see both sides. People like, we need to have the vaccine safety debate. Well, there it is. It's right there in writing black and white. And it's not like an off the cuff debate either. It's not even like you say, well, it's gotchas. It's, you know, you're just a better, uh, you're just a better lawyer. So you can argue better, right? You know, that kind of this is, you know, each side took the time to put forth their best arguments with their best citations and their best proof. And anybody out there can go and read it. And that's, I think, probably what makes it so powerful. But, um, so that's where it started. I think it was one of the first things we did that was almost a decade ago. I wish I could say I had more hair then I didn't still at the same place I was. Uh, and then, uh, you know, quickly on the heels of that, uh, we kept digging in in terms of doing, uh, Freedom of Information Act requests. I saw that in the montage you guys just did. And, you know, you know, right out of the box. Uh, we got them to admit that they'd never done the biannual safety reports to Congress that they need to do to, to detail how they improve vaccine safety because they weren't doing vaccine safety, really, not in a way that actually would improve vaccine safety.

**[01:01:03] Aaron Siri, Head Legal Counsel, ICAN**
We did the lawsuit with regards to getting them to admit they have no studies to support, that the vaccine is given in the first six months of life don't cause autism. We got them to admit that, for example, that there isn't a clinical trial relied upon to license flu shot and Tdap vaccine for pregnant women back then. We also sued on most of the vaccines on the child's schedule to get the underlying clinical trial documents so that we could authoritatively say, right. The thing that drives CNN crazy and Politico crazy, right? Ready for it, right. Which is there isn't a single licensed childhood injected vaccine on the schedule today that's ever been licensed based on a placebo controlled trial period, categorical. And I know it's true. And, you know it's true. And America can know it's true because we have the clinical documents and that chart there supports it except for the Covid 19 vaccine. Not only that, any vaccine uses a control was never licensed based on a placebo controlled trial, and we have the proof for every one of those. And that was, you know, one of the first big endeavors that we took. Some of it required lawsuits. And then after a while, they just kind of gave it over without lawsuits and so forth.

**[01:02:17] Aaron Siri, Head Legal Counsel, ICAN**
Um, obviously we've restored religious exemptions. We did that in Mississippi, for example, for the, you know, a few hundred thousand kids there now can go to school without it. We did it in the you see. Yeah, we did it in the University of California. Oh, it's cool to have an audience, huh? Yeah. We did the University of California, uh, University of California system, where the hundreds of thousands of kids there now have a religious exemption. And then I think maybe even most critically, you know, most critically, it's a lot of times the biggest ones are the ones you don't see because across this country, every year they introduce bills to get rid of the exemptions to add more vaccine requirements. And for the most part, those are beaten back. They're not adopted. And why is that? It's because I'd like to think in large part, it's because of the work that's done, one by the state groups in those states who go out, meet with their state representatives day in and day out. And a lot of times I'm heartened to see that the material they often use, the information they use comes from ICAN, which was, you know why ICAN does so much that it does. And I think that that also helps hold the line, as we've seen in a lot of places. And we've also done a lot of work, obviously, to protect parental rights.

**[01:03:33] Aaron Siri, Head Legal Counsel, ICAN**
Um, you know, striking down vaccines, uh, the, the law in Washington, D.C., that would have let any child in this country go there and get vaccinated without parental consent. Yeah. We, we took down a. Yep. Um, got a flu shot requirement in Massachusetts, um, got, you know, taken away. We, we struck down a Covid vaccine requirement in California, you know, that apply to all school districts as well as the precedent actually applies to all vaccines that no school district, no county in California can require any vaccine, which was their plan. Because even in California, even in California, I don't even need to add an adjective. They couldn't get more vaccines required for school at the state legislature level. So the plan that Richard Pan and others had was, well, let's just get school districts to those counties to require the flu shot and HPV vaccine and go down the list. And this stopped. And in fact, Richard Pan filed letters in our lawsuit to try and. Yeah, and, and obviously, we we did a lot of work to break down the Covid issue, getting the Pfizer, the documents that the FDA licensed, the Pfizer vaccine and Covax. And we just finished that got all 9 million pages released and got the V-safe documents that you had a part of your montage earlier, and, um, I can keep going for a long time, but I'll stop there.

**[01:04:57] Del Bigtree**
You you could keep going. It goes on and on. Um, and it's amazing. I think we have somewhere around 90 lawsuits going right now across the country in FOIA requests and all of that. But there's an announcement I finally get to make, Aaron, that you've been driving me crazy for quite some time now, which is on this case that we were supporting. And it's the first ever case that was brought against a vaccine manufacturer. And ultimately, um, well, let me go ahead and play the commercial that's at the heart of this lawsuit, just to remind people that this was taking place a couple of years ago. Watch this.

**[01:05:39] Female Speaker**
There's something out there. It's a highly contagious disease. It can be especially serious, even fatal to infants. Unfortunately, many people who spread it may not know they have it. It's called whooping cough, and the CDC recommends everyone, including those around babies, make sure their whooping cough vaccination is up to date. Understand the danger. Your new grandchild faces. Talk to your doctor or pharmacist about you and your family getting a whooping cough vaccination today.

**[01:06:10] Del Bigtree**
Now, of course, this was about how many of you remember that ad campaign? And they had pictures of it in Reader's Digest and magazines. Um, this was the entire push to get every grandparent to go and vaccinate if they wanted to see the baby. And Aaron, we were getting so many complaints on this from people like, I don't want to get the vaccine, but my children aren't allowing me to see my new grandbaby until I get this whooping cough vaccine. I don't know what to do. Um, and you brought the case. Why don't you explain what the case is? Because it was quite unique.

**[01:06:46] Aaron Siri, Head Legal Counsel, ICAN**
Uh, sure. So, uh, as everybody in this audience, I'm sure knows that the National Childhood Vaccine Injury Act of 1986 grants immunity for lawsuits that allege, you know, that seek damages, direct damages for injuries from vaccination. Well, in this lawsuit, we alleged false advertising, obviously, which is a different kind of claim. Um, and, uh, I'm going to put aside all the complications of it, but the claim was effectively this, the pertussis vaccine, that Tdap vaccine, it can reduce symptoms, right? So you are less likely to know that you've been infected with the pertussis bacterium. But what the data and studies reflect and make clear, in fact, is that if you get the vaccine, you are still just as likely to be infected and carry that bacteria in your nasopharynx and hence transmit it. You're just going to let. You are. Uh, you're just less likely to have symptoms. So think about that. The person that gets the vaccine just as likely to be infected, just as likely to spread it has less symptoms. Do are they more or less likely to hold the baby? Are they more or less likely to go to school? Obviously, they don't know they're sick. They're most likely to hold a baby, kiss the baby, smooch the baby. On the other hand, the person that doesn't have the vaccine that gets infected is more likely to know they have symptoms less likely to kiss the baby, smooch the baby. Right. And so forth. Um, and so as we've seen these two groups, the vaccinated and the unvaccinated, it is the vaccinated individual that's more likely to pick up a baby.

**[01:08:31] Del Bigtree**
And they're trying to say not vaccinating makes grandma the big bad wolf. And am I to understand that you actually made an argument similar to know the vaccinated grandma is actually the big bad wolf?

**[01:08:44] Aaron Siri, Head Legal Counsel, ICAN**
Yea yes the vaccinated grandma is actually the big bad wolf. Based on what their analogy is, I don't think any grandma's big bad wolf, just to be clear, but good. But based on their analogy, who's going to be have the teeth that's going to eat their baby? Who's who's more likely to do it? Who's less likely to kill? In fact, what does a wolf do to a baby? It murders the baby. I mean, what is that? What is the message that, you know, one could take away from that commercial? You're a murderer. You're a murderer. If you don't take this product, that's really the message. And but and the irony is that it's the opposite. Who's really the quote unquote, based on the way that they wanted it painted that don't not saying this in reality. Who is who is that? Who is that person? It's the one that gets the worst part, by the way, is that those who actually had been infected by pertussis never got vaccinated. They then have sterilizing immunity, at least for many years. They're not going to get infected again. Those who got the vaccine, they can be infected over and over and over and over and over again. So, you know, this was all in our court papers when we filed that class action lawsuit. That's what I just reflected to you. We allege in there and you know who said these things? Their own paid consultants in peer reviewed studies. So it wasn't like we had to go like, you know, create this argument. They admitted it, these folks admitted it. And so that ad campaign was, you know, a few weeks later, you couldn't find it. It was gone.

**[01:10:14] Del Bigtree**
Yeah. I mean, that was the thing. I mean, as soon as you started this case, essentially all the ads came down. This is years ago. I said, I want to I want to report on the fact that all the ads you said, no, no, no, no, no, no, no, you're not reporting on anything.

**[01:10:27] Aaron Siri, Head Legal Counsel, ICAN**
Well, it's best to wait until the lawsuit is finished.

**[01:10:30] Del Bigtree**
Let me just take this moment. We beat the big bad wolf.

**[01:10:35] Del Bigtree**
Okay. So, October 29th, 2026.

**[01:10:44] Aaron Siri, Head Legal Counsel, ICAN**
So it's true, this lawsuit that was now five years ago. And so you've been chomping at the bit and you finally got to do it five years later. But obviously, you know, since it was a pending lawsuit, as you know, we typically don't talk about pending lawsuits. It's always better. And then when it's finally concluded and done, uh, now you get to do that. Uh, and now it is complete. We, you know, ended up having a class wide settlement, uh, in New York and final approval and everything has now been done. And so, um, it is now, um, it's done. And so, you know, the important part too is it's not necessarily just this one instance of getting this commercial off, you know, taken down and which I think in and of itself was really important to be sure. But it's also sending a message to pharmaceutical companies. There is a line, there's a line that you, you know, you don't have total impunity. You can't even you can't even, you know, you can't just go and say and do anything. And it was, it was an opportunity to show that there is there is a line to the, the claims that you can make to the public about these products. And while, uh, legacy media and even alternative media, let's call it didn't report on this case, you know, who was reporting on this case all the way through. It was the industry publications, because I would read it in there and the industry publications for years. They reported on this lawsuit at many intervals. And so the industry has gotten the message. And that's a really important outcome of this lawsuit as well.

**[01:12:19] Del Bigtree**
Um, just just one of so many important and brilliant outcomes, Erin. Um, you're, you're a huge pillar in the medical freedom movement. Now, I would say in a movement around free speech. And of course, you make the work that we do at ICAN possible? I say it every time. You're a hero, Aaron, and I'm just so thankful to have you working with us. Thank you for 500 amazing weeks of work.

**[01:12:50] Aaron Siri, Head Legal Counsel, ICAN**
To the 500th episode.And by the way, I thought this was informal, so I didn't wear my tie for once, but we ended up getting serious.

**[01:12:57] Del Bigtree**
Want to see your boxers? All right, Aaron, take care. We'll be talking to you again soon.

**[01:13:05] Del Bigtree**
Thank you. Well, look, I just want to say that, you know, all of this. And again, I was just on this podcast yesterday and Jeffrey Tucker was thanking me for the work that we did in releasing the V-safe data and in releasing the Pfizer data, the Moderna data. And I, you know, really said, I want to say right now, don't thank me. Thank all of the people that make ICAN possible, all the sponsors, all the donors that have been supporting us. I mean, five years That case, five years we've been paying to put Aaron inside of a courtroom. Every time he had to be there with the V-safe data. It took years, I think, nearly four years from between the FOIA request and finally getting responses. The government never expected any lawyer to be funded and stand inside of a courtroom while they delayed and obfuscated and lied and pushed the, you know, the can down the road. No one's going to be able to afford that because there's no money to be made here. Well, it's because of you, the sponsors, that make this possible. Every one of you, whether you're giving a dollar a week or $20 a week, or you've given us a large donation, you have made this work possible. These giant montages we've been showing you of all the incredible work is what you have done in this world by supporting us. If you're listening right now, you can just text us at 72022. Become a recurring donor or hit this QR code. But for everybody in this audience, Everybody out there watching this. I want to thank you because you are the Informed Consent Action Network. There's so many people that make the show happen. So many people that have come on this show, people behind the scenes, and some of them are no longer with us. And we want to recognize those brilliant individuals that help make the The HighWire and ICAN everything that it is. You will forever be remembered.

**[01:15:02] Brandy Vaughan, learntherisk.org**
For those of you who don't know me, I used to work in pharma. I used to work for Merck, one of the largest vaccine makers in the world, and they don't play nice with former employees. They don't play nice with whistleblowers. We have the truth and they know that, and they're running scared, and they can see that we are making a huge impact.

**[01:15:23] Female Speaker**
The doctor says, hey, he's the age that you should get the HPV vaccine. Two weeks after he started having a really bad neck ache. The MRI showed inflammation in the spinal cord in his neck from T1 to T12. I did do a lot of sports and was my favorite. Now I have to sit on the sideline. Yeah, I'm angry that they're still giving out vaccine. Gotta do your research. Like you don't can't just trust a doctor anymore.

**[01:15:52] Toni Bark, M.D.**
Cancers that were never heard of in the pediatric population are now being diagnosed in the pediatric population. We live in a toxic soup, right? And so it's what we're eating. It's what's in what we're eating. And then you throw the vaccination on top of it. And this is now we're in our third generation of highly vaccinated people. There are people waking up. It's a lot of work and time and effort. But, you know, that's how the world's been changed one person at a time.

**[01:16:22] Dr. Vladamir Zelenko, Family Physician**
This is a war for survival and survival of the soul of humanity. And ultimately, it's going to have to take people ready to sacrifice everything in order to bring the truth to the world.

**[01:16:38] Male Speaker**
God gave you a body treated as a temple. And if we allow a government, in the words of Thomas Jefferson, to dictate the foods we take into our mouths and the medicines we take into our bodies, our souls will soon be in the same state as those who live under tyranny.

**[01:16:55] Dr. Jim Meehan, MD, Internist**
As a father, as a grandfather, as a doctor, as a follower of Christ, I am. I am very committed to this issue of our religious freedoms. The debate is not being had. There is no discussion because the discussion is censored. And that's what's destroying real science and the health of a population in this world today.

**[01:17:22] Female Speaker**
At the end of this journey, I don't want to be one of those mothers standing there saying what I wish I would or could or should have done. I want to be able to say I gave it everything that I had.

**[01:17:49] Sue Collins, Co-Founder, New Jersey Coalition for Vaccine Choice ,**
We're fighting for everybody, and it's been exciting and it's empowering, and more and more people are finding the truth. And once you have the truth, it can't be taken away.

**[01:18:04] Female Speaker**
I was in at the very beginning and I'd been called by Andy Wakefield. He said, I need your help. I was like, really? It needed somebody that really knew how to communicate from to the people. And my friend Donna Schumann had met this guy, Dale Bigtree. I've been hearing about it. And, you know, it's just all kind of came together. It's a beautiful thing to, to finally see the recognition and the acknowledgment for the truth.

**[01:18:31] Female Speaker**
I actually took the vaccine to try to encourage my clinicians that it was safe and to encourage them to take the vaccine also. It's us against the world right now. You know, nobody else wants to speak up. The biggest reason that we all agreed to come here is because we want people to know they're not alone.

**[01:18:54] Female Speaker**
I've been a nurse for nearly 25 years, and I have witnessed an increase in neurodevelopmental disabilities and chronic disease in our children. I was a very, very pro-vaccine person, and I believed that they were extensively studied. And doctors believe that. And when you go there and sit there and you hear what evidence is being used to support this, it's appalling.

**[01:19:14] Del Bigtree**
I know you talk to other nurses and doctors and you've been very outspoken on this. So I want to say thank you for showing up. This is what's making a difference. You know, I've said about and I'm sure there's those of you out there who have family members that, you know, we can't, you know, cover everybody. And if we missed you just know you're loved. Um, and all of the individuals there and all the individuals that come on the show and so many of you that have shared the, the word, you know, what it means to be alive. And I think that, you know, when I watch videos like that, you just realize for all of us, no matter how long we're here, it's a short period of time and it's really not how long we're here, it's what we do with it. And so I'm just so proud of the work that we've done, all of the great people that we have either been supported by or represented on this show that went on to, you know, continue this work. Um, it's been great to be that microphone for the world, for those brave individuals that stood up to tell the truth. You know, my my dad, when I was growing up, my I have a big theater family.

**[01:20:31] Del Bigtree**
We all come from theater. My dad ended up being a minister, but we would write musicals together and put on plays and things in our church. And one of the things my father told me about being an artist, he said, you know, if you really want to move somebody, you know, don't just be dramatic. A drama can only get so far. It's only when you make people laugh that you open up their heart so that they can actually hear the truth. And it's something I've thought about a lot in my own creative work. You know, we have to keep a sense of humor. And one of the things that really got lost during Covid was our sense of humor was one of the most terrifying things about it. Suddenly, no one was allowed to crack a joke. No one was allowed to just, you know, make light of any of the craziness we were going through. And so, you know, when I think about those heroes. One of the things that Highwire had to get through was censorship. The end of free speech. And I have said this. I've said this about the last election. I am a one issue voter. I am not a one issue voter on the vaccine issue.

**[01:21:35] Del Bigtree**
I am a one issue voter on our First Amendment right to free speech, because without it, we have no other rights. And having been. This whole team used to work in Hollywood, California, when for those of us on my team that were at Paramount Studios and the doctors television show right in the heart of Los Angeles, we knew what it was like to live in a place that was losing its mind and losing its perspective. It got very, very difficult. I've talked to friends now, big producers and and movie stars that talk about having like, whisper, they still have to whisper whisper in restaurants, especially if they want to, you know, talk about anything that isn't about like voting for a Democrat. But when I think about those stars that have stood on the front lines for free speech, stood on the front line for every man, not just that reporters should have free speech, but mom and dad and grandma and grandpa and everybody should have the right to speak their mind. Of course, there's only one individual I think that hits the mark, the level we're talking about. She's going to be joining us in a moment. Watch this.

**[01:22:47] Male News Correspondent**
Welcome please. Roseanne Barr.

**[01:22:50] Male News Correspondent**
All right. Roseanne Barr.

**[01:22:52] Female News Correspondent**
Please welcome back to the show Roseanne Barr.

**[01:22:55] Male News Correspondent**
She is a young housewife from Denver. We introduce her to television a couple of months ago, and we thought she was marvelous.

**[01:23:00] Rosanne Barr**
Because I'm a housewife. I hate that word. And I hate the word homemaker, too. I want to be called domestic goddess. That was the author of the character and in fact, the author of of the concept and, and the context and, and everything having to do with that show. It came from here.

**[01:23:20] Female Speaker**
I'm just going to look like a freak. That's all. What else is new?

**[01:23:23] Male Speaker**
Shut up.

**[01:23:24] Rosanne Barr**
This is why some animals eat their young.

**[01:23:28] Rosanne Barr**
There wasn't resistance to having a show about a working class family on television. There was resistance to have a show about intelligent, working class people on television. I did knock the number one show, The Cosby Show, out of first place almost immediately.

**[01:23:47] Male News Correspondent**
20 years later, The Conners are back and alive. Roseanne premieres again Tuesday night here on ABC.

**[01:23:53] Female News Correspondent**
18 million people watching. I guess you can catch lightning in a bottle twice.

**[01:23:59] Rosanne Barr**
I'm very grateful that people watched and support it. And and the fans are back and I'm really thankful for that.

**[01:24:07] Female News Correspondent**
It is one of the most shocking developments in TV history. Abc cancels its number one comedy Roseanne after a racist tweet from its star.

**[01:24:16] Rosanne Barr**
You know, I made a mistake. Obviously it cost me everything and I've paid the price for it. Greetings, humans, earthlings and others. Welcome to the Roseanne Barr podcast. Everything I say, people like you is always laughing at me. And then it comes true and you never go. I'm sorry I made fun of you, Roseanne. You was right. Free speech is being shut down to such an extent that you can't be a poet or an artist or somebody.

**[01:24:43] Rosanne Barr**
Or a comedian.

**[01:24:44] Rosanne Barr**
Is a provocateur. And that's why I'm going to start referring to myself as the artist formerly known as Roseanne.

**[01:24:52] Male News Correspondent**
Are you ready for a Roseanne comeback? Roseanne Barr just wrapped production on Me, Emma, a new eight episode comedy series shot in Austin, Texas.

**[01:25:01] Female News Correspondent**
Randy Quaid, Jon Lovitz and Drea de Matteo are among the familiar faces in the cast.

**[01:25:07] Male News Correspondent**
Barr, aka Mimi, plays the matriarch of a mixed race family of preppers.

**[01:25:13] Rosanne Barr**
It is my opus.

**[01:25:15] Male Speaker**
I think so. I think it's.

**[01:25:16] Male Speaker**
The best thing you've ever done. That's a high bar. It kind of starts like Roseanne with the family, and then it turns into like an acid trip.

**[01:25:22] Rosanne Barr**
It's kind of like what I would have done in the 11th season on ABC if they had any balls.

**[01:25:30] Del Bigtree**
All right, you guys ready? Ladies and gentlemen, Roseanne Barr.

**[01:25:43] Rosanne Barr**
Hi, del.

**[01:25:44] Del Bigtree**
Oh, hey. Come on. Come around this way. Right up in there. All right.

**[01:25:53] Rosanne Barr**
Here's a nice.

**[01:25:54] Del Bigtree**
Thank you. Nice and pink.

**[01:26:01] Rosanne Barr**
Love you back.

**[01:26:05] Del Bigtree**
All right.

**[01:26:07] Rosanne Barr**
Well, I'm not even looking at the audience. Oh, well.

**[01:26:10] Del Bigtree**
No, they're going to be looking at you. Yeah, they'll get to watch the screens. But you talk to me or we're going to have the weirdest interview of all times.

**[01:26:17] Rosanne Barr**
I get it, okay? I see what we're doing here.

**[01:26:21] Del Bigtree**
You are a legend. I want to thank you, first of all, for joining us on the 500th episode. That really means a lot to me.

**[01:26:28] Rosanne Barr**
Well, I was so happy you asked. I really enjoyed last time when I was here.

**[01:26:36] Del Bigtree**
Yeah, it was really great. And, you know, the themes are the same. It's been, you know, a couple of years and, you know, where are we at? I mean, when you think of freedom of speech, I think that you are I mean, there should almost be a postage stamp that you represent that. Where are we at? Do you think in America, are we moving in the right direction? Um, as you travel around, what do you think is the state of our First Amendment right?

**[01:27:05] Rosanne Barr**
Well, it's under heavy duty attack for sure, and.

**[01:27:09] Del Bigtree**
I have you turn this way and look over your right shoulder. Over my right. There we go. There we go. Like that. I know you've never done this before.

**[01:27:17] Rosanne Barr**
Well, not this way, but yeah, I think it's under heavy duty attack. And we're being bombarded with messages that are not for our good or the good of our country or the good of humanity. And it's a constant bombardment. And I think at the underneath all the BS that we have to listen to every day, that's all a lie, uh, is, uh. Shut up. Don't say it. You risk something when you say anything that has to do with the truth.

**[01:27:53] Del Bigtree**
Yeah.

**[01:27:54] Rosanne Barr**
And, uh, you know, it's, uh, like, uh. Our our freedom of speech, our freedom of every sort is under heavy attack. And I think that a lot of Americans are oblivious to oblivious to it, which drives me out of my damn mind.

**[01:28:18] Del Bigtree**
Yeah.

**[01:28:19] Rosanne Barr**
They really have done a number on our minds and, uh, and our memories.

**[01:28:25] Del Bigtree**
When when we look back at that montage, when you're cracking the jokes about being a domestic goddess, did you have thoughts about speech then? Was that an issue you saw coming? Um, or, you know, did you watch the world changing around you?

**[01:28:44] Rosanne Barr**
Well, it was always an issue because, uh, and it was always part of my life too, um, as it was for women in my time and women before me, my mother, my grandmother, you know, there's just certain things that women weren't supposed to say and weren't supposed to recognize and weren't supposed to criticize in any way. And, and huge, huge structures were built around us not seeing, not noticing, not not naming. But when I was a little girl, for some reason, I was just born weird. I was I asked my mother and she said, no, you're always this way. And she said, when I was just a number of hours old, in the nursery there where I was born, in the hospital in Salt Lake City, that all the little babies were, um, sleeping quietly. But she said there was one that wouldn't stop screaming. And she knew that it was her baby and that I was trying to shove both of my fists into my mouth because I guess I was really hungry even then, and my mom said they had to make you a little straight jacket to put your keep your arms back so you couldn't go, ah!

**[01:30:15] Del Bigtree**
Wow.

**[01:30:16] Rosanne Barr**
And I've never stopped going. Ah.

**[01:30:18] Del Bigtree**
Yeah.

**[01:30:20] Rosanne Barr**
You know, and that really is my life. And I was always mad that I was always told to shut up. I was always told, since the day I learned to talk, that I needed to shut up. And it made me mad.

**[01:30:34] Del Bigtree**
You know, it's interesting you said in that montage that part of the problem with the character of Roseanne and the family is that not only did they not sort of want to see that family unit on TV, but they didn't want to see you being intelligent. And I think that's interesting because we don't think about that character really as an intelligent hero, even though you were whip smart, you know, had this, you know, fiery, wicked tongue. It was absolutely hysterical. But it wasn't until I heard that I thought about the power of what you were doing, because not only were you shifting, you know that here's a house, a mom, a house wife that is not being heard, and suddenly you become you become the biggest show that's out there. But it was exactly the type of mom, at least we were told that was told to just shut up.

**[01:31:29] Rosanne Barr**
Yeah, but in the real world where I grew up in the real world, which was working people. Yeah. The thing that made me so damn mad when I watched TV when I was just a little girl, was, hey, these people ain't nothing like anything I ever see, right? Because every house, including my own, was, uh, had a mother exactly like Roseanne Conner. And all the dads were just like, uh, Dan Conner. That's how people live. There was a lot of love. There was a lot of yelling. There was a lot of, you know, figuring out how you're going to stretch that dollar. Yeah. And there was a lot of faith, and there was a lot of respect for the country we were in, even though we knew we were on the low part of the stick, we knew we were getting.

**[01:32:17] Del Bigtree**
Yeah.

**[01:32:19] Rosanne Barr**
Thank you. Hey. Thank you for agreeing.Thank you. Thank you very much. And also, we knew now they've emboldened me, which they're going to.

**[01:32:33] Del Bigtree**
Oh.

**[01:32:35] Rosanne Barr**
But we knew he was way smarter than anything we were seeing on TV. We knew it. We knew that that was fake. Yeah. And we knew. We knew we were smart. Um, and when we would watch TV, you know, sometimes you watch with your neighbors or the neighbor kids. Come over and watch with your family. Everybody knows when you live in a neighborhood and people cared for each other.

**[01:33:03] Del Bigtree**
Yeah.

**[01:33:04] Rosanne Barr**
And, uh, if somebody needed something, you know, anonymously, the neighbors would bring.

**[01:33:11] Del Bigtree**
Yeah.

**[01:33:12] Rosanne Barr**
But that's how it was in the working class. That's how it was in working people. You know, it was a different structure than what we were being fed on TV and which captured our minds for hours every day. But when people come over and we'd watch, we would make fun of it. We'd go like, oh, yeah, right. Everybody's mom was Pearl's when she's scouring the toilet.

**[01:33:35] Del Bigtree**
Right, right.

**[01:33:37] Rosanne Barr**
You know, and that's where I was just like, when I grow up, I'm going to, I'm going on TV and, and I'm going to do a show about us. And I did, and people liked.

**[01:33:52] Del Bigtree**
It. It's amazing just that you said, you know, that wasn't us. None of us were like that. And you think about the facade of Hollywood. You. You tore that down. You tore it down. And you said, no. I think people want to see themselves. I don't think we want to watch supermodels acting like us and telling about their fake problems. You brought real problems, as you said, stretching, stretching the dollar, trying to get through a day and.

**[01:34:20] Rosanne Barr**
And most importantly, always loving each other. Like when I came back from my reboot, I had a Hillary hater and a Trump hater living together under the same roof, and still they were mad as hell at each other like everybody in the country was. But I wanted to come back and go, hey, don't let us. Don't let them make us hate each other, because then they win. Yeah. And, uh.

**[01:34:46] Del Bigtree**
Yeah.

**[01:34:49] Rosanne Barr**
And I so, you know, my own family went through that and still goes through it.

**[01:34:54] Del Bigtree**
Yeah, we all I think I think I think all of our families now are being divided by this darkness that's pukes out of our television sets through the media that we're watching. It's making it impossible for us to communicate with each other.

**[01:35:11] Rosanne Barr**
Oh my God, it is so hard. Yeah, it's so hard. But that's why I wanted to put it on the reboot, the Roseanne reboot, because, you know, they really had no choice but to, you know, unite and, you know, to get through every day. People are forgetting that. Yeah, but I don't think the real people forget it. But, um, they're sending that message to us. Forget everything. Forget about this. I mean, I could go on forever, but it's, you know, I call it. Can I swear on this?

**[01:35:44] Del Bigtree**
Go ahead. Yeah. Its 500th episode.

**[01:35:49] Rosanne Barr**
It's a unified field of bullshit.

**[01:35:53] Del Bigtree**
All right. I agree. I agree. You know, speaking of a unified.

**[01:35:58] Rosanne Barr**
You know why? Because they want us not only ignorant. They want us divided. They want us ignorant of what's really going on. And they never report what's really going on. They make up fake news stories so they don't have to report what's really going on. And they want to lead people away. They want them divided. They want them unhappy. They want them griping all the time. So they're not grateful because. When you're grateful, better things happen to you than when you're bitter and hateful.

**[01:36:36] Del Bigtree**
I agree.

**[01:36:37] Rosanne Barr**
So they want to oh boy, they're getting me going. They want to disrupt our spiritual connection to God. That's what I think is amazing. They do.

**[01:36:51] Del Bigtree**
I agree.

**[01:36:52] Rosanne Barr**
And you know, we got to get strong in um knowing that and that we are in a big war. It is. I think a lot of people say it's it's the big, big war. And, and I do think that that is true, that it is a war of good versus evil. And I also know because, uh, you know, I believe, but the ones of us who are here now, I want him to hear me say this. I can't these people got me going on. I told you, you're going to be sorry.

**[01:37:31] Del Bigtree**
But never.

**[01:37:32] Rosanne Barr**
We have to know that we are the ones who are here now. And we are here for a reason.

**[01:37:41] Del Bigtree**
I agree. I agree. So with all of that.

**[01:37:45] Rosanne Barr**
That's way we are the right people at the right time with the right hearts. Looking for the right people to do the right thing and we can do it.

**[01:37:59] Del Bigtree**
I agree. It's been my message as I'm traveling the world everywhere I go. If it's not us, then I don't know who it's going to be. And if it's not now, then I don't know what time you think is left. It is a critical time we're in. So in this critical time, you've decided to get back into creating media. You created this new show. Me, Ma.

**[01:38:21] Rosanne Barr**
Yeah. Me, Ma.

**[01:38:22] Del Bigtree**
All right. Uh. Here's here's the poster. Me, ma. A modern day fable. Um. Why? Why this show? Why? Why this story?

**[01:38:36] Rosanne Barr**
Well, because I, uh, you know, after they, um. I don't know what the word is. Uh. Um. You know, did what they did and tried, censored.

**[01:38:56] Del Bigtree**
Humiliated.

**[01:38:57] Rosanne Barr**
Stole.

**[01:38:58] Del Bigtree**
Stole.

**[01:38:58] Rosanne Barr**
Um, called me a racist when I've been a civil rights activist my entire life.

**[01:39:04] Del Bigtree**
And we even talked the last time. Even gotten to throw your hat in the political ring for a little while.

**[01:39:09] Rosanne Barr**
I did, I ran against Obama because I hate him.

**[01:39:12] Del Bigtree**
Yeah.

**[01:39:12] Rosanne Barr**
And unfortunately, I was not able to win.

**[01:39:16] Del Bigtree**
I know that is unfortunate for all of us.

**[01:39:18] Rosanne Barr**
I was only on three state ballots and that.

**[01:39:21] Del Bigtree**
Believe me, I know how hard that is.

**[01:39:23] Rosanne Barr**
It took so much. You know, I couldn't even. It was amazing that I even got on three. And you know why I got on three? I want to give a shout out to a. Vietnam veteran. He and his daughter did the work to get me on three state ballots. Nobody else.

**[01:39:44] Del Bigtree**
Wow. That's neat. You know what? To help. Help get into this. To help get into discussing.

**[01:39:50] Rosanne Barr**
Can I just say this? I know you want me to do it, and I'm going to do it real quick. It's okay. But I was, uh. Never will. I have nothing to do with them people ever again. Yeah, because that's the devil. That whole town is nothing but the devil.

**[01:40:07] Del Bigtree**
Talking about DC.

**[01:40:08] Rosanne Barr**
Well that too.

**[01:40:10] Del Bigtree**
Oh, Hollywood.

**[01:40:11] Rosanne Barr**
Yeah.

**[01:40:12] Del Bigtree**
The other DC.

**[01:40:13] Rosanne Barr**
Yeah, the other DC. And they are both, you know. Yeah. Bad.

**[01:40:17] Del Bigtree**
They are.

**[01:40:18] Rosanne Barr**
And they give they give people who, uh, might not always choose the wrong thing, but they give them an incentive to do the wrong thing, you know? So even if you're good, you're going to, you know, if anyway.

**[01:40:33] Del Bigtree**
Make it if you're not doing bad.

**[01:40:35] Rosanne Barr**
No. Right.

**[01:40:35] Del Bigtree**
Yeah.

**[01:40:36] Rosanne Barr**
So I'm like, I'm never going back there. I'm never going to. And then, my son, who's my. He calls. I call him my handler because he does really take care of me. Yeah. He's 40.

**[01:40:48] Del Bigtree**
That's got to be

**[01:40:49] Rosanne Barr**
I live with my son. Well, he has two toddlers, so it's easier for him to take me after that because I'm like a toddler. Uh, you know, I'm always drinking out of a bottle, and I wear diapers.

**[01:41:08] Del Bigtree**
All right.

**[01:41:09] Rosanne Barr**
But let me just say, I had given up. And my son said, mom, what if you could do whatever you wanted to do? And you were surrounded by people that loved you and wanted you to succeed, would you do a show? And I said, oh hell yes, that would be a blessing from God. And my son said, there are people that want to invest in you, mom. And that's how me mom happened.

**[01:41:32] Del Bigtree**
Fantastic. Well, you have an amazing cast and one of my favorite cast members has also been on this show. I'm talking about the host of the podcast, ultra free podcast. I'm joined by Drea de Matteo right now. She's my.

**[01:41:48] Drea De Matteo, Emmy Award Winning Actress**
Oh.

**[01:41:50] Drea De Matteo, Emmy Award Winning Actress**
My, oh my God.

**[01:41:54] Rosanne Barr**
Hi, baby.

**[01:41:55] Drea De Matteo, Emmy Award Winning Actress**
I'm fucking crying over here. I'm sorry. I'm cursing.

**[01:41:58] Del Bigtree**
This is the 500th episode. We're like, we're just saying it's okay.

**[01:42:01] Drea De Matteo, Emmy Award Winning Actress**
Okay, first of all, happy birthday, Del and Roseanne. Oh my God.

**[01:42:07] Rosanne Barr**
I love you so much. You're my baby.

**[01:42:11] Drea De Matteo, Emmy Award Winning Actress**
Woman.

**[01:42:12] Del Bigtree**
It's amazing.

**[01:42:13] Rosanne Barr**
She played my daughter. And it's so great because she reminds me I have three daughters and she reminds me of how they are. And she had a relationship with her mom. Kind of like how I got with my girls, right?

**[01:42:28] Drea De Matteo, Emmy Award Winning Actress**
Yes. Well, my mom passed away recently, so when you wanted to do the show, I was like, oh, my favorite mother. My spirit animal. Both of you are my spirit animals, Del. You're my male spirit animal. I think everyone thinks that Roseanne might be their spirit animal. I hear that expression often, but I don't think anybody even fully understands how. I mean, I was on The Sopranos. It was huge. Roseanne. Huge. But being able to come and work with you just for two minutes felt like the most important thing I have done through my entire career. I swear to you, um, the way it all came together because of what's happening in the world, what the show is about, what Roseanne is about, who Roseanne really is. Just watching you on set. Roseanne watching you love everyone 24 hours a day and watching how you treat the little girl who was playing your granddaughter. My daughter? Um. Watching you run around with her. But just watching you laugh at your fellow comedians when they're saying their lines while you're right in the scene and you can't help but start cracking up. I don't know if anyone really understands how how you embody just the word love. That is what I have to say. That is what I have to say. People think.

**[01:44:01] Del Bigtree**
So. So my understanding, people.

**[01:44:02] Drea De Matteo, Emmy Award Winning Actress**
Think that both of us are so tough.

**[01:44:04] Rosanne Barr**
Love.

**[01:44:05] Drea De Matteo, Emmy Award Winning Actress**
and were not

**[01:44:05] Rosanne Barr**
It is love. That's where, you know, that's where, uh, all performers get it. It's channeled and it's a gift. And, you know, it's all, it's all just about love. You couldn't, you can't write jokes out of hate, you know? So I do love, I love the work. I loved you so much. And you were just the perfect daughter. The faces you make at me, I'm like, oh my God, that's my that's my kid, you know?

**[01:44:39] Del Bigtree**
Well, I can't wait to see it. What is this show about?

**[01:44:42] Rosanne Barr**
Um. Uh, well, here's what it says. I mean, I had to really coalesce this one down because I got no focus, but it's about, it's about a, uh, a a grandma. Well, like, I could go on forever. It's kind of about my whole generation.

**[01:45:03] Del Bigtree**
Okay.

**[01:45:04] Rosanne Barr**
The, the boomers in that what we went through and how we came out of it. But, uh, it's about a woman that, uh, is from the, you know, was a hippie in the 60s and parents. Yeah. Just and then one day she realizes it's all BS and then she turns back to her faith. She. She reestablished her faith with God and becomes a doomsday prepper in Texas.

**[01:45:39] Del Bigtree**
That sounds like a show.

**[01:45:40] Rosanne Barr**
I think it's me. It's my life.

**[01:45:44] Rosanne Barr**
But she also hears. She also gets. She talks to God quite a bit. And then she does everything God tells her to do. Like me. It's kind of me.

**[01:45:57] Del Bigtree**
Yeah.

**[01:45:58] Rosanne Barr**
Uh. Well, then she hears it wrong and does everything wrong.

**[01:46:02] Del Bigtree**
And that would be a prepper is all about, isn't it?

**[01:46:04] Rosanne Barr**
Well, she kind of like it. She makes a lot of mistakes, and. But in her heart, she's like, God tells her like, hey, if you want your kids to grow up free in the USA, you're going to have to take matters into your own hands. And so she does take matters quite literally into her own hands. And, uh, doesn't she? And oh, I'm not,

**[01:46:28] Drea De Matteo, Emmy Award Winning Actress**
I'm cracking up on the inside here.

**[01:46:30] Rosanne Barr**
She makes a lot of mistakes, and she gets involved in, uh, some crime and stuff like that. And, uh, she only goes into crime to pay for her granddaughter's bat mitzvah.

**[01:46:43] Del Bigtree**
All right. Yeah.

**[01:46:45] Del Bigtree**
Drea, first of all, it's great to see you again. And you. Your podcast is amazing. You're just you're so free and honest and true and real. Um, I don't know how you're still living in California, right? While you're acting like you talk about all these, like you walk down the street in that crazy place.

**[01:47:05] Drea De Matteo, Emmy Award Winning Actress**
Yeah. They haven't come for me yet here. They haven't tried to take me down yet.

**[01:47:09] Del Bigtree**
Would you describe yourself as a prepper in any way? Or what did you do to prepare for this role?

**[01:47:15] Drea De Matteo, Emmy Award Winning Actress**
I mean, with all of the fake news happening right now, which, I mean, I still think we should be prepared. But if everyone's talking about the 90 day shutdown, you know, you might as well just be. I mean, they're saying that I think it's a lot of horse shit. Yeah, but I do. And if it. And if it's real, it's going to be a false flag of some kind. It'll be our people. But I never got the memo about censorship, clearly, because I haven't stopped running my mouth.

**[01:47:45] Del Bigtree**
All right. I love it.

**[01:47:47] Drea De Matteo, Emmy Award Winning Actress**
So.

**[01:47:47] Rosanne Barr**
Well, even in the show, Drea put put Drea put in stuff about, um, you know, what do you call it again?

**[01:47:55] Drea De Matteo, Emmy Award Winning Actress**
The the chemtrails. My obsession.

**[01:47:58] Del Bigtree**
Okay.

**[01:47:59] Rosanne Barr**
Stuff like that.

**[01:48:00] Rosanne Barr**
We talk about stuff that's really going on.

**[01:48:02] Del Bigtree**
I love that.

**[01:48:03] Drea De Matteo, Emmy Award Winning Actress**
You guys have it the worst over there in Austin, by the way. But they're they're hitting us hard right now because we're it's about to rain. That's how it works around here. But um, anyhow, prepper wise, yes, we we're having a huge Halloween party for my daughter. I have to hide all of the buckets of food, all of

**[01:48:22] Drea De Matteo, Emmy Award Winning Actress**
All the buckets, um, all of the things. Water on every corner. Um, generators. Yeah. So we're, we're preppers for sure. We don't have tunnels though. That would be nice. We're not rich enough.

**[01:48:34] Del Bigtree**
Well I think we're all we're all chomping at the bit. Any idea when we're going when it's going to release? We're going to get an opportunity to see the series.

**[01:48:43] Rosanne Barr**
Well, if I can stop editing it because, you know, now I'm obsessed with them.

**[01:48:48] Del Bigtree**
You're going Picasso. We got to drag you away from the canvas.

**[01:48:51] Rosanne Barr**
We. I just gave it to a what do you call it, agent? Okay, so I got that far. I got the music done. I got all the stuff done and the edits are going. And I want to say in the end that God does make a guest appearance.

**[01:49:07] Del Bigtree**
Okay, well, we will all look forward to that moment. Dreya, I want to thank you for joining us today. Thank you for being a part of our 500th episode. You're a rock star. We love you.

**[01:49:19] Drea De Matteo, Emmy Award Winning Actress**
Thank you. You're the rock star.

**[01:49:21] Del Bigtree**
All right, go enjoy that Halloween party in Roseanne.

**[01:49:24] Rosanne Barr**
Everybody should have water and stuff put away. Yeah, all the time for emergencies. Because you never know how fast stuff can change.

**[01:49:31] Del Bigtree**
I think our own government is now telling us.

**[01:49:34] Rosanne Barr**
They are

**[01:49:34] Del Bigtree**
stuff away, which I keep saying. Whatever they're saying to you, believe them. Listen to them. Whether, you know, whether what they're doing is right or what they plan on.

**[01:49:44] Rosanne Barr**
And get guns too. And a lot of bullets.

**[01:49:49] Del Bigtree**
We certainly do not have a shortage of that in Texas. Roseanne. You're amazing. Thank you for joining me. So wonderful. What a rock star. Amazing.

**[01:50:00] Del Bigtree**
Thank you.

**[01:50:01] Rosanne Barr**
You're a god

**[01:50:01] Del Bigtree**
I love you.

**[01:50:05] Rosanne Barr**
I love you all.

**[01:50:06] Del Bigtree**
All right.

**[01:50:07] Rosanne Barr**
Right.

**[01:50:09] Del Bigtree**
Okay. You can. Yes. Go ahead. Watch your step. You got other. We got, we got. We got season two to work on, so. Yeah. Keep yourself healthy. Well, look. It's been. Thank you, thank you, thank you. What an amazing day we've had here.

**[01:50:25] Jenn Sherry Parry, Executive Producer**
Del.

**[01:50:25] Del Bigtree**
Hold on a second. Wait wait.

**[01:50:26] Jenn Sherry Parry, Executive Producer**
What? Oh sorry about that guys. Hey we've got one more video that you have not seen yet.

**[01:50:32] Del Bigtree**
Oh okay. We've also got feedback. We got a video.

**[01:50:36] Jenn Sherry Parry, Executive Producer**
If you haven't seen yet, roll that blooper reel.

**[01:50:39] Del Bigtree**
Uh oh. These are the people in your government. In your government? How they're screwing you over. Hold on. It's all over the place.

**[01:50:54] Robert Malone, mRNA Vaccine Pioneer, Immunologist, Molecular Virologist, Vaccinologist, Pathologist & Physician**
When people in the administration now talk about getting cockblocked, this is the kind of crap that goes on. This is tricks.

**[01:51:01] Del Bigtree**
I didn't realize that was a medical term too, or a science term, but we've now put it in the lineage. Okay?

**[01:51:07] Robert Malone, mRNA Vaccine Pioneer, Immunologist, Molecular Virologist, Vaccinologist, Pathologist & Physician**
It's widely used.

**[01:51:09] Del Bigtree**
I know they know that. I know.

**[01:51:13] Male Speaker**
And.We know. And if. You know, you know, but there's so many people that don't know.

**[01:51:19] Del Bigtree**
Oh.

**[01:51:20] Del Bigtree**
Do you think we would ever do something as outrageous as giving children a product that had never been safety tested? How could you dare you be? So don't miss The HighWire this Thursday, 11 a.m. Pacific Time where all is revealed every single week, including insane car accidents. This is a book that I said to you earlier. I wish I'd read it. We are that little snowball that is just rolling down the mountain now. Can you feel it? Oh, b r WHO got it right. We did. You got it wrong. And then I want to talk about. And then I want to talk about. And then we're going to talk about this is not a donation to help a rhinoceros in Africa. He's bringing his writing partner, John Lee to discuss their new book. Don't know What it's called. Honestly, if you came over and begged me to slam a vaccine into you, I'd say bend over when you want to call. Bologna beans. Hand it to me and I'll jab it in your ass for you. The FDA said you're not going to get it for 75 years. Oh, yeah? Wait till you meet Aaron Siri. Boom.

**[01:52:34] Aaron Siri, Head Legal Counsel, ICAN**
Then I just, like, say, hey, we're just going to throw this in there for shits and giggles. Let me not curse. I've never cursed before. Let me do that again.

**[01:52:43] Del Bigtree**
Jefferey I can't, I can't.

**[01:52:45] Del Bigtree**
And then. And then we're. Hi, I'm Del Bigtree, CEO of Make America. I didn't write this, so it's not. Let's make sure that that tape doesn't go to the Christian group. So GoFund me go fund yourself of what we do in this situation. Except for guys like you and women like you. It started to get juicy where every week is our coming out party.

**[01:53:09] Joseph Ladapo, Florida Surgeon General**
I catch you guys every week, man. I watch you guys every week. Love what you guys do.

**[01:53:14] Del Bigtree**
Well, it looks like we're penetrating, Joe. We're going to keep doing this. We're going to be doing it hard. We're going to be doing it long. We're going to be doing it right. This is the Highwire. Before I sound like some adult channel.

**[01:53:29] Crowd of People**
00000000. Yeah.

**[01:53:38] Del Bigtree**
It's over.

**[01:53:51] Del Bigtree**
Well, I don't know how you actually finish up a 500th episode, except to say that I have no idea how we got here. It's been an amazing ride. As they say, life is what happens while you're making plans. I want to give a shout out to God for making all things possible because it's really, truly why we're here. And I also want to say, you know, as I travel all over, people come up and say, you know what? What is it I can contribute to El or what am I supposed to do? And I always say, only, you know, only you have an expertise, something that you are alive in this world to bring. Right? At this time, I could not agree more with Roseanne. It is us. Us. There's no one else. We're the ones in the room. We're the ones with this world in the position that it's in right now. We have been chosen. You've got to recognize that that is true. But as I look back on, you know, this Highwire journey, I would never I don't think I would have been able to do it. And this is my advice to anyone out there that has got some voice inside of them saying, you know what, I feel like I want to do. Uh, what I want to say is I never sat down and said, oh, we are going to rewrite laws. We're going to bring back the religious exemption to Mississippi. We're going to have a giant studio in the middle of Texas. We're going to have 500 successful episodes, and we're going to be this effective powerhouse in the medical freedom space. That just simply isn't how it happened.

**[01:55:27] Del Bigtree**
And I think if I'd have thought like that, it would have been impossible to take the next step. Instead, this journey started exactly like I told you to. Like I told you, it did. One guy said, you know what? You should start a podcast. Well that's great, I appreciate that. No, no, I'm not letting you leave the room until you pick a time. Here it is. Pick that time. That task in that moment was, well, I guess I can look at these little empty boxes here and say, Thursdays are usually pretty open for me, and I feel like people would want to watch something sometime around 11 a.m.. So let me take that spot. And frankly, that's all that's happened. Every day is just one more square, one more decision, one more thought, one more meeting. An attorney like Aaron Siri. Hey, why don't we try to do something together? And slowly but surely, each little moment. In fact, it's. I talk about a lot. Sort of my version of if you have faith, the grain of a mustard seed, you can move a mountain. It's not. It's not determining how much faith I actually have. What it's saying is, can I move something as small as a mustard seed and trust that that is actually going to make the difference that is necessary in this world? That is what this team at The HighWire does every single day that makes this possible. They trust that their inspirations, they trust that their research, they trust that the next thing that they're doing will mean something to somebody, somewhere in this world. And that's why.

**[01:57:01] Del Bigtree**
They do it. It's why I want to honor them. So I'd love for the team of The HighWire to come out right now and join me as we close up this show.

**[01:57:22] Del Bigtree**
All right.

**[01:57:43] Del Bigtree**
I don't think you're in Jefferey. Are you okay? He's okay. Very good. All right. Oh, I messed it up. Like everyone's out of line.

**[01:57:50] Del Bigtree**
I know. All right, well, I don't know who's playing this music. Is there someone still in the control room. But to all of you out there, I just want to say thank you for 500 amazing episodes. Thank you for not just watching. Thank you for sharing. Thank you for speaking your truth. Thank you for spreading the word. We have gone from 75% to this country against us, thinking we didn't have a right to have control over our own bodies. Now we are in the majority and they are in the minority and we are not going to stop here. So for the 500 episodes we have and the 500 to come, I want to say happy 500th episode. Yeah.

**[01:58:42] Del Bigtree**
Whoa! All right. Take care.

**[01:58:48] Jenn Sherry Parry, Executive Producer**
Hey.

**[01:58:49] Jenny McCarthy**
To Dell and the whole team over at The HighWire. You guys, congratulations on 500 episodes.

**[01:58:56] Vani Hari, Food Activist, Author & Speaker, Founder, Truman, Blog: FoodBabe.com**
Congratulations to the whole highwire team on 500 episodes.

**[01:59:01] Joseph Ladapo, Florida Surgeon General**
Hey, Del Jen Jefferey. Aaron, just want to tell you guys congratulations.

**[01:59:08] Pierre Kory, MD, Founder, Front Line Covid-19 Critical Care Alliance, Expert in Treatment of COVID-19, Author, “The War on Ivermectin”**
I'm so excited for you. 500 episodes, 500 episodes.

**[01:59:12] Esai Morales, Award Winning Actor**
Wow. Who knew? What a brilliant idea. The HighWire. What a great show.

**[01:59:17] Tyler Hudson, Singer and Songwriter**
Happy 500th Highwire. We love you. We only wish we'd found you earlier.

**[01:59:21] Libby Hudson, Singer and Songwriter**
Congratulations, mate.

**[01:59:22] Andrew Wakefield, Academic Gastroenterologist**
You 500th edition of Truly Independent Broadcasting.

**[01:59:27] Barbara Loe Fisher**
The first online news channel that is dedicated to investigating and reporting on vaccine related issues.

**[01:59:35] Pierre Kory, MD, Founder, Front Line Covid-19 Critical Care Alliance, Expert in Treatment of COVID-19, Author, “The War on Ivermectin”**
It's really, literally the best out there. The research, the objectivity, the data that you're bringing forth, always hard hitting.

**[01:59:41] Vani Hari, Food Activist, Author & Speaker, Founder, Truman, Blog: FoodBabe.com**
500 episodes of challenging the status quo, holding corporations accountable and helping people take back their health. What an incredible milestone.

**[01:59:52] Brianne Dressen, Co-Chair, React 19, react19.org/study**
That's 500 episodes of telling the truth, not taking no for an answer, and ensuring that the real information makes it out to the public.

**[02:00:00] Rob Schnedier**
I want to say congratulations to to del to the entire The HighWire team. Jefferey Jaxen, who's a wonderful journalist, and to everybody over there.

**[02:00:10] Zen Honeycutt, Founding Executive Director, Moms Across America**
For 500 episodes, you have inspired us to show up, speak up and be brave.

**[02:00:18] Esai Morales, Award Winning Actor**
You're doing God's work, nothing less.

**[02:00:20] Jenny McCarthy**
You guys have been on the front lines, guiding us, teaching us, healing us.

**[02:00:25] Dr. Aseem Malhotra, NHS-Trained Consultant Cardiologist, Heart Disease Expert, Professor of Evidence-Based Medicine**
I'm proud to say that my friend Del Bigtree and his brilliant team at The HighWire have been at the forefront, speaking truth to power.

**[02:00:34] Prof. Christopher Exley, PhD, Aluminum Expert**
It's been a great pleasure to watch you over these years, and particularly watch you as my best pupil on aluminum toxicity in humans. Well done mate.

**[02:00:46] Dr. James Neuenschwander, MD, Board Certified, Emergency & Integrative Medicine, President, Medical Academy of Pediatric Special Needs, (MAPS)**
You know, The HighWire has always been that beacon on the hill. That shining light that I know. No matter how bleak, how gray the week gets, all I have to do is make it to Thursday and Del and Jefferey in the entire incredible highwire team is going to lift me up and give me the energy to face another week of this world.

**[02:01:07] Rob Schnedier**
Del Bigtree not only jumped in with both feet, he jumped in with his heart and he became a leader in this movement, bringing dignity and a real conscience to this fight. And I'm grateful to know, uh, honored to call him a friend.

**[02:01:25] Joseph Ladapo, Florida Surgeon General**
The work that you guys have been doing is just invaluable. Unbelievable. And, you know, it's wonderful to see you guys doing it and making such a great impact while wearing a smile the whole time, no matter what happens.

**[02:01:39] Barbara Loe Fisher**
Here's to you, Del, and to your into your staff for a decade of investigative journalism that has educated really people around the world.

**[02:01:50] Esai Morales, Award Winning Actor**
Actually helping fill in the blanks of understanding of consciousness, what the reality that needs to be shared by all so we can help ourselves and each other as a human species.

**[02:02:02] Bob Sears, MD. Pediatrician, “The Vaccine Conversation”**
I just want to remind you, as you celebrate the big 500, that it's all worth it. All the travel, all the late nights, all the filmmaking and editing and research, everything you have to put up with in this fight. It's all worth it.

**[02:02:21] Dr. James Neuenschwander, MD, Board Certified, Emergency & Integrative Medicine, President, Medical Academy of Pediatric Special Needs, (MAPS)**
Keep up the great work, you guys. I appreciate each and every one of you for what you've done to make this show this successful.

**[02:02:27] Dr. Sherri Tenpenny, DC, www.masteringvaccineinfo.com**
It's been great being in this fight with you, and we will continue on to the end because we're determined to win for the sake of humanity.

**[02:02:35] Lindy Magee, Co-Director & VP of Mississippi Parents for Vaccine Rights**
Here's to 500 more episodes of Raising hell and raising awareness. Congratulations.

**[02:02:41] Jenny McCarthy**
If anyone deserves a statue made of bronze, it's the team over at The HighWire. You guys have no idea how much you mean to us, the viewers, the people for standing up for medical freedom. I will always, always be grateful. Here's to a million more amazing episodes. Love you guys.

**[02:03:00] Rob Schnedier**
I love you. God bless you and keep up the good work. You can do it. Highwire 500.

**END OF TRANSCRIPT**
